### Identification code

**Document types** Digital Data from Cartridges of Super Nintendo Entertainment System (SNES) video games (Binary Streams)

### Mandate

**Planning purpose** The library has the legal obligation to preserve every published console video game like national libraries are obliged to preserve publications on paper and offer possibilities to display these games to the public.

**Designated community** The target audience are visitors of the library. It is not necessary to publish the collection online. Access to games from the library collection to experience the games original look & feel should be possible for the public. Access to original media shall not be necessary to avoid damage to rare specimen.

**Applying policies** For legal reasons only games physically in the possession of the library are preserved.

### Relevant organisational procedures and workflows

### Contracts and agreements specifying preservation rights

## Reference to agreements of maintenance and access

### Plan relations

No previous attempts to preserve these kinds of documents have been made.

### Triggers

Trigger	Comment
Changed Environment	New formed legal obligation to preserve video games.

### Samples description:

3 games are selected for every system: - One of the best selling games for the system, as those are usually of the biggest public interest. This should be a standard game without special enhancements like overlays, special controllers or specially needed accessories. - A game with special overlays or special controllers, as it is more difficult to preserve the look & feel for these kind of games than for others. - A game using an accessory expanding the capabilities of the system. This additional hardware can either be applied to the system itself or on the media. If no hardware extensions are available, one of the last games for the system is selected. Those are usually the hardest to preserve as developers are able to utilize a system most at the end of its product cycle.

### Collection profile

#### Collection ID:

**Description:** Physical collection of Cartridges for the Nintendo SNES which have been transfered to binary streams.

**Type of objects:** Digital Data from Cartridges of Super Nintendo Entertainment System (SNES) video games (Binary Streams).

**Number of objects:** 1000

**Expected growth rate:** Slow. Occasionally new games can be added to the librarie's collection.

Name	Short name	Description	Original environment	Data	Object-format
Super Mario World	SMW	A popular game selected for the system. It was the first game for the system with Nintendo's famous character the plumber "Mario". It was also one of the	Super Nintendo Entertainment System (SNES) (PAL)	No data	<b>PUID:</b> <b>Name:</b> <b>Version:</b> <b>mime-type:</b>

Name	Short name	Description	Original environment	Data	Object-format
		best sold games for the system.			
Super Scope	Super Scope	No games for this system used overlays, so a game with a special controller was selected. Super Scope is a game which was shipped with a light gun shaped like a rocket launcher.	Super Nintendo Entertainment System (SNES) (PAL)	No data	<b>PUID:</b> <b>Name:</b> <b>Version:</b> <b>mime-type:</b>
Star Fox	Star Fox	Various games for the Nintendo SNES used special hardware on the cartridges to support the systems processing power. This game uses a chip that assists the systems central processing unit with 3D calculations.	Super Nintendo Entertainment System (SNES) (PAL)	No data	<b>PUID:</b> <b>Name:</b> <b>Version:</b> <b>mime-type:</b>

Name	Description	Reason for considering	Config settings	Necessary resources
ZSNES 1.51	SNES Emulator	Only emulators that have seen at least one release in the last 6 month or that have been released in stable final versions are evaluated. If no emulator exists which meets this criterion, the latest released emulator is evaluated. Only emulators for personal computers running on a Microsoft Windows or Linux operating system or on a virtual machine on one of these operating systems are evaluated. For every system a maximum of 3 emulators are evaluated. If more than 3 emulators meet the criteria defined here,	default configuration like in release package of ZSNES 1.51	

Name	Description	Reason for considering	Config settings	Necessary resources
------	-------------	------------------------	-----------------	---------------------

SNES9X 1.51	SNES Emulator	<p>the ones which have been in development longest are considered. Alternatives are selected by using the publicly most popular and best rated emulators according to a world wide web research. Dedicated emulators as well as emulators supporting more than one system are chosen if available. Only emulators that are known to be able to launch commercial games are selected. ZSNES is one of the most popular emulators for Nintendo SNES.</p> <p>Only emulators that have seen at least one release in the last 6 month or that have been released in stable final versions are evaluated. If no emulator exists which meets this criterion, the latest released emulator is evaluated. Only emulators for personal computers running on a Microsoft Windows or Linux operating system or on a virtual machine on one of these operating systems are evaluated. For every system a maximum of 3 emulators are evaluated. If more than 3 emulators meet the criteria defined here, the ones which have been in development longest are considered. Alternatives are selected by using the publicly most popular and best rated emulators according to a world wide web research. Dedicated emulators as well as emulators supporting more than one system are chosen if available. Only emulators that are known to be able to launch commercial games are selected. SNES9X is one of the most popular emulators for Nintendo SNES.</p>	default configuration like in release package of SNES9X 1.51	
MESS 0.119	Multisystem Emulator	<p>Only emulators that have seen at least one release in the last 6 month or that have been released in stable final versions are evaluated. If no emulator exists which meets this criterion, the latest released emulator is evaluated. Only emulators for personal computers running on a Microsoft Windows or Linux operating system or on a virtual machine on one of these operating systems are evaluated. For every system a maximum of 3 emulators are evaluated. If more than 3 emulators meet the criteria defined here, the ones which have been in development longest are considered. Alternatives are selected by using the publicly most popular and best rated emulators according to a world wide web research. Dedicated emulators as well as emulators supporting more than one system are chosen if available. Only emulators that are known to be able to launch commercial games are selected. MESS is the multi system emulator for Nintendo SNES which supports the most other systems as well.</p>	default configuration like in release package of MESS 0.119	
VLC 0.8.6c	Video Approach - making videos of the games running on original hardware	The video is captured in the original resolution as used on a standard TV with the original frame rate that the system produces. As a container format MPEG-4 Part 14 (or short MP4) is used as it allows the use of metadata tags and is a common standard. The open source VLC media player1 release 0.8.6c is used to play-back the recorded videos.		
Museum approach	keeping original hardware and software			

**Decision:** GO

**Reason:** As the original system as well as all needed original media are not available, the museum approach is not applicable and will not be evaluated.

**Action needed:** no action needed

Alternative	Experiment description	Run description	Experiment
-------------	------------------------	-----------------	------------

			<b>data uploaded</b>
ZSNES 1.51	Each experiment is carried out on a HP Compaq Business Notebook nc6120 personal computer for running the simulation or emulation programs. A system without dedicated graphic card was used to test the independence of special hardware. Hardware specifications of the used personal computer: - Intel Pentium M 750 1.86 GHZ Processor - Mobile Intel 915GM Express chipset for graphic and sound system - 1.5 GigaBytes main memory - DVD-ROM drive - serial, parallel, FireWire, USB2.0 and Ethernet network interfaces - 15" TFT-active matrix display with a maximal resolution of 1024 x 768 and 24 bit color resolution (16.7 million colors) - digital joystick connected to USB-port - analog joystick connected to USB-port Configuration options: The Windows 32bit versions of alternatives are tested, if more than one version exist that would run on the system used for the experiments. For every sample record the default settings of the tested preservation alternative are used to carry out the experiment. The default settings are the settings as set in the release version downloaded from the alternative's homepage listed in the tables in Appendix D. Game settings are set according to the region and video display frequency needed by the game. Necessary add-ons for the sample record are activated (if necessary and possible).	For every alternative menu options and configuration possibilities are reviewed for the usability aspects of the requirements. Next a short review of the source code (if available) is performed to evaluate the figures concerning the infrastructure aspects. Selection screens, 3D and 2D game sequences (if applicable) are tested for the audible and visible aspects. The preserved alternative is compared to either the original image on a TV screen produced by the original system if available or to a video recording of the original game. The test is performed using the standard PC controls (mouse, keyboard) as well as the digital or analog PC joystick (whichever resembles best the original controller of the system) to evaluate the interactivity aspects of the game. Every game is played at least 5 minutes to detect glitches along the playing progress. The same tests are performed on the original system to compare the gaming experience.	No
SNES9X 1.51	same as for ZSNES 1.51	see ZSNES 1.51	No
MESS 0.119	same as for ZSNES 1.51	see ZSNES 1.51	No
VLC 0.8.6c		For the video approach the visible and audible aspects of a recorded sample of the gameplay is compared with the original system.	No

**Recommended alternative for this preservation plan:** SNES9X 1.51

**Reasoning:** SNES9X has the best result if Weighted Sum AND Weighted Multiplication are considered, VLC and MESS have to be discarded (no interaction on VLC and not all objects interpretable on MESS)

Release 1.3 **beta** - Institute of Software Technology and Interactive Systems: « [off-ice bears](#) »
