PREFACE	v
Glossary	xi
1 WIRELESS DATA COMMUNICATIONS	1
1.1 Signal representation	2
1.2 Analog to digital conversion	5
1.3 Digital to analog conversion	8
1.4 Architecture of an SDR application	9
1.5 Quadrature modulation and demodulation	11
1.6 Spread spectrum	14
1.7 Antenna	18
1.8 Propagation	20
1.9 Ultrawideband	25
1.10 Energy management	27
1.11 Exercices	27
2 MEDIUM ACCESS CONTROL	29
2.1 Fundamentals of probability and statistics	30
2.1.1 General concepts	30
2.1.2 Random variables and distributions	32
2.1.3 Counting processes	34
2.2 Modeling traffic	37
2.2.1 Delay models	37
2.2.2 Queuing models	38
2.2.3 Birth-death processes	38
2.2.4 $M/M/1/\infty$ queuing system	39
2.2.5 $M/M/m/\infty$ queue: m servers	41
2.2.6 Queues for channel allocation	43
2.2.7 Queues with reserved channels for handoffs	44
2.3 Multiple access	46
2.3.1 Uncoordinated access	46
2.3.2 Contention-based access	47
2.4 Demand assigned multiple access	51
2.4.1 Bit-map	51

2.4.2	Binary countdown	51
2.4.3	Splitting algorithms	51
2.5	Carrier sense multiple access in IEEE 802.11	53
2.5.1	Persistence	54
2.5.2	Collision avoidance	55
2.6	Medium access control in ad hoc networks	56
2.6.1	Neighbor aware contention resolution	57
2.6.2	Multiple access protocols	57
2.6.3	Throughput analysis of NAMA	58
2.7	Bibliographic comments	60
2.8	Exercises	60
3	AD HOC WIRELESS ACCESS	65
3.1	Management of Bluetooth networks	66
3.1.1	Architecture	66
3.1.2	The Bluetooth asymmetric protocol	69
3.1.3	Bluetooth protocol architecture (IEEE 802.15)	72
3.2	Model for node discovery in Bluetooth	74
3.2.1	Protocols for node discovery	77
3.2.2	Multiple nodes competing for air-time	81
3.3	Bluetooth formation algorithms	85
3.3.1	Bluetooth topology construction protocol	86
3.3.2	Bluetree	86
3.3.3	Tree scatternet	87
3.3.4	Bluenet	87
3.3.5	Scatternet formation algorithm	88
3.3.6	Loop scatternet	88
3.3.7	Bluestar	88
3.4	Mesh mode of WiMax/802.16	89
3.4.1	Scheduling	91
3.4.2	Management messages	92
3.4.3	Mesh network	93
3.4.4	Sleep mode	96
3.5	Bibliographic comments	100
3.6	Exercises	101
4	WIRELESS NETWORK PROGRAMMING	105
4.1	Structure of information	105
4.2	Socket	107
4.3	Parameters and control	109
4.4	Receiving frames	110
4.5	Sending frames	111
4.6	Exercises	113
5	AD HOC NETWORK PROTOCOLS	115
5.1	Normal IP routing	117

5.2	The reactive approach	118
5.3	The proactive approach	122
5.4	The hybrid approach	127
5.4.1	Neighbor Discovery Protocol	128
5.4.2	Intrazone Routing Protocol	129
5.4.3	Interzone Routing Protocol	132
5.5	Clustering	134
5.6	Quality of service	138
5.7	Sensor Network Protocols	142
5.7.1	Flat routing	142
5.7.2	Hierarchical routing	142
5.7.3	ZigBee	144
5.8	Exercices	147
6	LOCATION AWARENESS	149
6.1	Geographic proximity	150
6.1.1	Neighborhood graphs	151
6.1.2	Relation between the neighborhood graphs	154
6.2	Constructing spanners of ad hoc networks	155
6.2.1	Gabriel test	156
6.2.2	Morelia test	156
6.2.3	Half space proximal test	159
6.2.4	Spanner for nodes with irregular transmission ranges	161
6.3	Information dissemination	163
6.3.1	Compass routing in undirected planar graphs	164
6.3.2	Face routing in undirected planar graphs	164
6.3.3	Traversal of quasi planar graphs	165
6.3.4	Routing in eulerian directed planar graphs	169
6.3.5	Routing in outerplanar graphs	171
6.4	Geographic location determination	172
6.4.1	Radiolocation techniques	172
6.4.2	Computing the geographic location	175
6.4.3	Three/two neighbor algorithm	176
6.4.4	Beyond distance one neighborhood	178
6.5	Random unit disc graphs	179
6.5.1	Poisson distribution in the plane	181
6.5.2	Connectivity and k -connectivity	182
6.5.3	Euclidean MST	184
6.5.4	NNG and k -NNG	184
6.5.5	Delaunay triangulations	184
6.6	Coverage and connectivity with directional sensors	186
6.6.1	Covering circles with sensors	186
6.6.2	Achieving coverage	187
6.7	Bibliographic comments	190
6.8	Exercices	191

7 AD HOC NETWORK SECURITY	197
7.1 Authentication techniques	198
7.1.1 Signatures, authentication and hashing	198
7.1.2 Signatures in networking	202
7.1.3 Distribution of keys	207
7.2 Physical layer attacks	208
7.3 Security of application protocols	209
7.3.1 WiFi/802.11 confidentiality	209
7.3.2 ZigBee security	211
7.4 Biometrics-based key establishment	214
7.5 Routing security	218
7.5.1 Routing attacks	218
7.5.2 Preventing malicious packet dropping	220
7.5.3 Secure ad hoc distance vector routing protocol	222
7.6 Broadcast security	225
7.6.1 Issues and challenges	225
7.6.2 BiBa broadcast authentication	226
7.7 Secure location verification	228
7.7.1 Simple echo protocol	229
7.7.2 Echo protocol	229
7.8 Security in directional antenna systems	231
7.8.1 Wormhole attacks and their impact on routing protocols	231
7.8.2 Zoning with directional sensors	233
7.8.3 Protocols for securing neighbor discovery	233
7.9 Bibliographic comments	239
7.10 Exercices	240
Bibliography	247
Index	254
