Gold is now within 15% of the Fibonacci Target

After reaching the measured target of 200% at \$2790, gold paused for three months, similar to its pause in March 2011. Based on the depth of the 2011 to 2016 pullback, we continue to measure the key upside Fibonacci target of 261.8% as \$3336.

Opinions in this report are solely those of the author. The information herein was obtained from various sources; however, we do not guarantee its accuracy or completeness. This research report is prepared for general circulation and is circulated for general information only. It does not have regard to the specific investment objectives, financial situation, and the needs regarding the appropriateness of investing in any securities or investment strategies discussed or recommended in this report and should understand that statements regarding prospects may not be realized.

Investors should note that income from such securities, if any, may fluctuate and that each security's price or value may rise or fall. Accordingly, investors may receive back less than originally invested. Past performance is not necessarily a guide to future performance. Neither the information nor any opinion expressed constitutes an offer to buy or sell any securities or options or futures contracts. Foreign currency rates of exchange may adversely affect the value, price or income of any security or related investment mentioned in this report. In addition, investors in securities such as ADRs, whose values are influenced by the currency of the underlying security, effectively assume currency risk. Moreover, from time to time, members of the Charts and Markets team may be long or short positions discussed in our publications.
