

CG Short: Line

Video Montage includes The Making Of

February 18, 2010 - 13:07

Line is a full CG short film created for the master thesis graduation in "Arts et Technologies de l'Image", at university Paris 8 by a group of french students. They did not try to create 3d human characters, so the foot at 00:46 is the only live action element of our short film. Their goal was to suggest human presences through offscreen and sound design work. 99% of the film is computer graphic made using Maya and Fusion primarily. They wanted to make it with CG hyper-realistic elements (sets/props) and with something more poetical like the black characters.

```
div.overlay { width:1040px; height:640px; } #imgplay { margin:86px 0px 0px 190px; } #player { background:no-repeat url('/videos/news/2010/february/line.jpg') top center; } #splash, #player, #player embed, #player object { width:560px; height:336px; }
```
