

WATER

Make UL Your WaterSense® Partner

As water scarcity becomes a growing concern, leverage WaterSense® to prove your products use less water without compromising performance.

UL evaluates the following products under WaterSense®:

- Commercial Pre-Rinse Spray Valves
- Flushing Urinals
- Flushometer-valve Toilets
- Lavatory Faucets
- Showerheads
- Tank-type Toilets

WaterSense® is a great way to differentiate your products above your competitors. Certification is required under green building codes (e.g. International Green Construction Code and CalGreen), the LEED program, and in some areas, the plumbing code itself. The WaterSense® label is more than just a logo, it shows a commitment to water conservation and allows you to participate in a national water efficiency brand.

Why Choose UL?

- Competitive pricing and fast turnaround times.
- Our experienced staff will quickly learn your products, your people, and your needs – you will not need to teach us with every submittal.
- UL provides a range of other services for sustainable plumbing products
- Receive direct access to our most technically competent staff that will collaborate with your team from the beginning to guarantee the smoothest evaluation process possible.
- UL's engineering knowledge spans many industries so your complex products can be evaluated all in one place.

Already Certified with Another Certifier?

If your product is currently certified by another ANSI accredited certifier, UL makes it easy to transfer that WaterSense® certification. Using your existing certifier documentation (parts list, test data, etc.) UL can make the transfer as seamless as possible.

If your company already has certifications with UL, consolidate and save money!
