

Raw Materials Traceability Services

UL Solutions helps companies mitigate exposure associated with raw materials sourcing.

Increased legislation, such as the U.S. Dodd-Frank Act and the EU Conflict Minerals Regulation, and consumer pressure are compelling companies to assure that the raw materials used in their products originate from ethical sources.

Integrated with each customer's sourcing practices, UL Solutions raw materials services trace product components, verify documentation of origin and trade, and objectively verify the due diligence of raw material sourcing.

- **Program Development** creates and implements strategies that help companies comply with traceability requirements while complementing their holistic responsible sourcing goals.
- **Traceability Assessments** investigate the source of raw materials used in a product.
- **Due Diligence Assessments** verify that management systems are in place to identify and react to risks in a supply chain and bring them into view, helping to identify additional resources as necessary for compliance to legal and other traceability requirements.
- **Supplier Training** enables supply chain partners to understand and share the company's responsible sourcing goals as they pertain to raw material procurement.

UL Solutions is a global safety science leader and provider of responsible sourcing auditing and advisory services, including supply chain monitoring, research, program development and training. Our responsible sourcing experts have the global footprint to provide services in over 120 countries.
