

# Fast Track your upgrade of connectors and terminal blocks certification with alternative plastic materials.

## UL Solutions can help you manage alternative supply chain channels.

The global economy is right now characterized by unprecedented volatility and supply-chain uncertainty. This volatility has resulted in the limited availability of raw materials and inflated costs with a significant impact on plastics, which can impair production efficiency and even the ability to deliver products.

Based on the need for production continuity, cost saving and stock surveillance, procurement strategies rely on additional and alternative raw materials to attain flexibility.

UL Solutions assists you with alternative raw material updates for marked connectors and terminal blocks. An already UL Listed or Recognized Component only needs a descriptive report update to comply with applicable requirements.

For Terminal Blocks and Connectors\*, if alternative plastic raw materials are equal to or better than the official ones, UL Solutions provides simplified testing procedures, gaining time and reducing costs for your projects.

**For any question or clarification reach out your UL Solutions sales reference representative or [contact us here.](#)**

\* based on UL 1059 Standard for Terminal Blocks and UL 1977 Standard for Component Connectors for Use in Data, Signal, Control and Power Applications.
