

What's changed in the new ACCPC?

Our **longest running certification programme** continues to **evolve** with a continuous focus on a **better learning experience**. We have **changed the sequence** in which the course is delivered in order to **even out the workload during the 3.5 weeks**.

A revised course structure

The order of topic delivery has been revised from a learning point of view to improve the flow and development of knowledge.

Alignment with new documentation

Particular emphasis has been given to the fundamentals of customization and Avaloq first steps.

Increased focus on Avaloq best practice

Rather than just one section on best practice, the concept is now embedded into all the teaching materials.

Expanded coverage of coding and Avaloq Script

SQL Developer, ice Workbench, PL/SQL and Avaloq Script coding are introduced at a much earlier stage and built on throughout the course.

Review of the question pool

Outdated, irrelevant or ambiguous questions have been removed or re-written.

FX starter course

The **Foreign Exchange Management** course provides a business overview of the **Avaloq FX functionality**.

Learn how the FX market works and how to **analyse and process FX transactions**. Understand how Avaloq implements the module and its life cycle in the **Avaloq Banking Suite (ABS)**.

This course is for anyone who is interested in the subject. Don't worry, it's business-centric so not a lot of techy jargon!
