

## Safety Services - Pre-Start Health & Safety Review (PHSR)

*"Compliance with Safety Standards Reduces the Risk of Injuries and Increases Productivity"*

In today's fast paced business world, maintaining a safe production environment is essential to protecting your company's bottom line, your employee's health and safety along with your company's reputation and assets while meeting your production, quality and delivery demands.

Whether you are installing new or modifying existing equipment or processes, or taking a proactive approach to workplace safety, a Pre-start Health and Safety Review (PHSR), Safety Audit and Risk Assessment will help you to meet your machine and process safety challenges.

Our Professional Engineers can ensure that you comply with both the Occupational Health and Safety Act and Regulations for Industrial Establishments (Regulation 851), as well as making sure that your existing equipment or process complies with current codes and standards.

### Can-Technologies can provide the following services:

- Carry out an On-site 'Safety in the Workplace' presentation and perform an initial Machine or System Safety Evaluation to determine if a Pre-Start Health and Safety Review (PHSR) is required
- Perform a full Machine or System Safety Audit
- Conduct a detailed Risk Assessment and submit a Preliminary Report with recommendations to bring the Machine or System into compliance
- Design, Install and Commission any applicable Safety solution to meet current regulations
- Carry out a full PHSR and provide full Documentation along with Sign-Off by a Professional Engineer
- Provide Safety Training
- Provide On-going Maintenance Audits to ensure Machines or Systems meets current and applicable safety regulations and standards
