FastRAMP/app

Derisk your FedRAMP® journey

Obtaining FedRAMP authorization demands substantial investments of resources and time. Many cloud service providers (CSPs) struggle to understand the intricacies of the process, how to accurately estimate costs and timelines, and plan for the longevity of their authorization.

These factors can hinder your ability to secure stakeholder buy-in and budget approval, making it daunting to start the FedRAMP process. By entrusting Coalfire with your FedRAMP environment, you can navigate these complexities and effectively achieve FedRAMP authorization.

Our approach

By combining advisory, engineering, and operations, FastRAMP/app helps you plan and execute a seamless journey that includes a comprehensive current-state assessment, environment build, technical operations, and ongoing FedRAMP compliance management.

Our FastRAMP/app approach is borne out of our extensive experience guiding organizations through the FedRAMP process. Our team has intimate knowledge of the controls, processes, and technical implementations required to meet the rigorous FedRAMP standards – and we're ready to help you navigate the journey.

Pre-authorization

We gain a deep understanding from your objectives, cloud services, and application stack. From there, we deploy and configure the necessary security tools, working alongside your team to launch your application using Infrastructure as Code. This strategic approach brings your cloud services to market efficiently.

Then, we develop your FedRAMP documentation and provide support throughout the assessment process to help you obtain your Authority to Operate (ATO).

Operations and maintenance

Once you've achieved authorization, we take on the responsibility of managing, maintaining, and monitoring your environment to ensure continued compliance. We act as an extension of your team, augmenting it with technical and compliance skillsets. Entrusting operations and compliance management to our team enables you to focus on what's important to your business.

Our team supports:

- **Availability:** Our dedicated engineers continuously monitor your system's availability, so you can meet your customers' demands.
- **Continuous monitoring and vulnerability management:** We manage all aspects of FedRAMP-required continuous monitoring, including documentation, development, and submission.
- **Security operations:** We monitor your system's security posture, including log monitoring and configuration review.
- **Incident management:** Our teams respond to alerts related to your system architecture.
- **Maintenance and patching:** We deploy development and staging environments to ensure your application's success and availability to meet rigorous FedRAMP patching requirements.

Why Coalfire

- Work toward achieving a state of continuous compliance by having the technical team who designed your system oversee and manage FedRAMP compliance.
- Reduce operational burden, save time, and optimize OpEx by offloading operations and compliance management to our experts.
- Fully own the security tools, licensing, and infrastructure. With FastRAMP/app, your authorization is truly yours.
- Enhance your team with technical and compliance skillsets without recruiting and onboarding new employees. We have deep experience with the controls, processes, and technical implementations required to meet FedRAMP standards.
- Work with the team who has provided services to more than 70% of FedRAMP-authorized providers, supported more than 200 advisory clients, and completed more than 100 assessments.

Take a holistic approach to FedRAMP.
