Executive Cybersecurity Services

Highlights

- Receive guidance from experienced CISOs
- Uplevel the cybersecurity knowledge of senior leaders
- Prepare to manage an incident at the executive level
- Develop strategic communications plans to keep relevant stakeholders informed
- Understand cyber threat trends to improve risk mitigation efforts
- Obtain a holistic picture of the relevant cyber threats to your organization
- Rapidly reduce risk-reduction backlog

Balance cyber risk with rapid business transformation

While CISOs are well-versed in cybersecurity, the understanding of this topic by other senior leaders is often lacking. Communications with CxO level executives are often ineffective due to a disconnect between the material presented on unique threats and risks to the organization, along with meaningful metrics, key performance indicators (KPIs), and expected outcomes. Even the most experienced CISOs benefit from outside perspectives and assistance with high priority projects and breach management to ensure mission success.

KPIs and Metrics	Communications	Breach Management
Develop meaningful KPIs and metrics to effectively brief and educate senior leaders and the board on risk and cyber defense effectiveness	Advance communication approaches to provide executive audiences and boards with the information they need to make risk-based decisions	Develop and fine tune Incident Response and Crisis Communication playbooks to prepare for a worst-case scenario and level up capabilities during a breach

Mandiant Executive Cybersecurity Services provide frontline expertise, tailored mentorship, and hands-on guidance for CISOs and senior leaders to achieve risk-reduction goals, communicate with non-security executives and board members, and prepare for cybersecurity incidents.

Mandiant Executive Cybersecurity Services help CISOs and other senior leaders achieve their risk-reduction and cyber defense readiness goals. These services include, but are not limited to, cyber threat profile development to understand business risks, and potential breach impacts and executive tabletop exercises that walk leaders through their IR plans in preparation for a real event. Mandiant also offers virtual CISO/vCISO and CISO advisory services to fill temporary gaps in security leadership, provide mentorship, and orchestrate customized training to existing security and intelligence teams.

Since 2004, Mandiant has worked with executives to advise them on incident readiness, response, and remediation and to increase communication effectiveness with senior leaders. Since every business is unique, Mandiant provides customized plans to achieve individual security program and overall business goals.

Here are some examples of executive services that Mandiant has delivered for organizations around the globe.

Prime executives for cybersecurity imperatives

- Gain knowledge of critical cybersecurity concepts including international cyber law, the evolving role of government in cybersecurity operations, and the use of cyber threat intelligence to further limit business and organizational risk

- Fill gaps and enhance existing security program effectiveness by bolstering your CISO's capabilities with seasoned vCISO mentorship

- Educate and inform business stakeholders on the latest attacker trends and potential incoming threats to help improve risk mitigation efforts and drive security investments

Ready executives for a breach

- Evaluate your organization's cyber incident response and crisis communications plans from an executive viewpoint

- Assess your organization's proficiency in breach response activities and decision making by walking through real-world scenarios in a roundtable environment

- Develop comprehensive cybersecurity crisis communications playbooks that guide effective communication workflows, drive strategic response measures and keep relevant stakeholders informed

Achieve cybersecurity initiatives faster

- Quickly reduce risk-reduction backlog with workflow prioritization guidance and hands-on execution

- Realize the most critical security program capabilities you can achieve immediately with assistance from frontline cybersecurity experts

- Develop process maturity improvement plans to ensure repeatability across your digital transformation journey
