

INFOSYS ACTIMIZE DIGITAL SUITE

Abstract

This case study focusses on the use of Infosys Actimize digital suite for an implementation at a leading building society headquartered in the UK having operations related to Retail banking. The institution wanted to consolidate and migrate their customer screening Solution to a cloud platform in order to future proof the service in terms of scalability and operating costs. The solution was built for screening consolidation where time to market was key to meet the increased screening service demands.

Infosys Solution

Infosys has simplified Actimize adoption with in-house solutions and frameworks to

Shorten the Actimize implementation journey; **Monitor** health after go-live

Cloud infrastructure provisioning & Deployment

In order to speed up the Actimize cloud environment setup –

Infosys Actimize Cloud Services Orchestrator was used to create infrastructure components through scripts. Various infrastructure resources were created in an automated manner in a lesser time frame following the execution of these scripts.

The orchestrator is cloud Agnostic and was plugged into the CI-CD pipeline. It was used to achieve

- Standardization,
- Recovery and resiliency using this module

Infosys Actimize Deployment manager was used to automate deployment of Actimize WLF components in the cloud environments. It greatly reduced deployment issues and failed deployments

Product configuration

WLF configuration timeframe was shortened across multiple environments using Infosys Actimize configuration framework which uses automated one click setup process. It achieved

- Significant effort savings
- Complex configurations rolled up in a single script
- Reduced error propagation & misconfiguration across environments

Data loading

Infosys Actimize Batch data manager standardized data loading and validating into UDM. Its data transformer and validator helped

- transform non-standard source data formats
- Improve data quality using validation rules as per Actimize standards

Application health monitoring

Infosys Actimize application diagnostics was used to monitor the health of Actimize WLF components (DB and App instances) on the cloud platform. Key RAG indicators helped in reducing application support effort by

- Automated monitoring of instances
- Health dashboards presenting Realtime status

Business Drivers

- To consolidate screening platforms on a strategic, future proof cloud platform
- Meet ever increasing screening services demand as new products & customers are onboarded
- Reduce operational costs using strategic vendor partnership to manage screening platform

Value Realization

- Shift Left of the program by 4-8 weeks for the MVP deployment
- Achieved data standards as per Actimize
- Enabled
