

ANYONE CAN AUTOMATE TESTING TOOL FOR RETAILERS BY INFOSYS

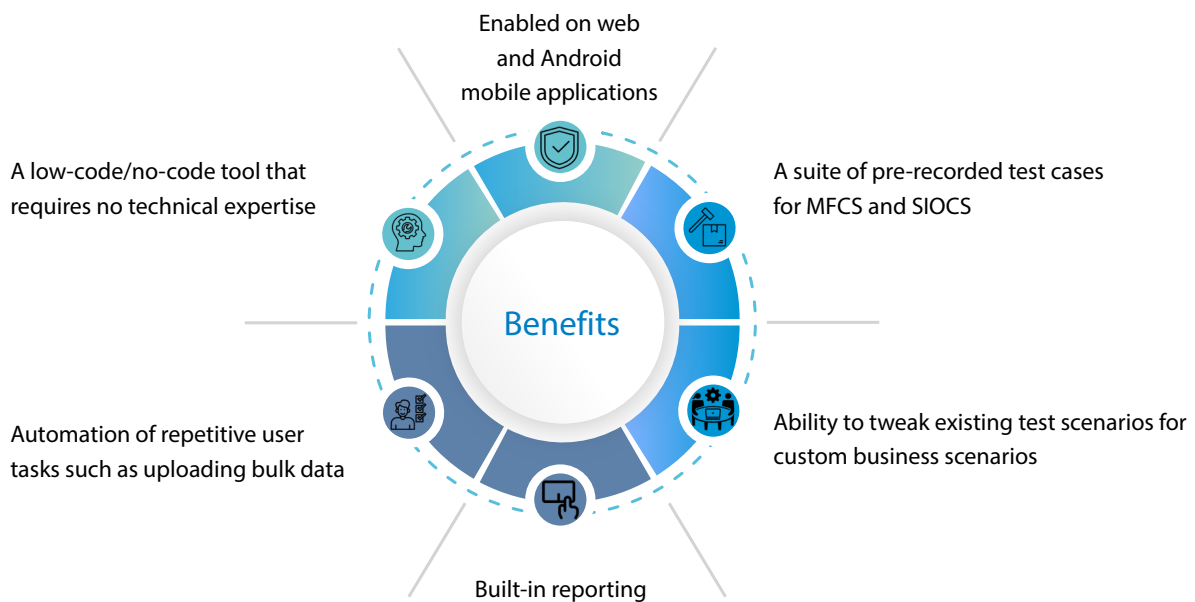

Retailers rely heavily on various applications to ensure smooth operations. To keep the IT landscape of retailers secure and up-to-date, Oracle releases several patch updates throughout the year. Each patch update must be tested and then deployed to production. This calls for extensive test planning and resourcing to ensure seamless deployments that do not disrupt business operations.

Testing Automation Solution

This solution is a low-code testing automation tool that can be easily adopted to run regression test scenarios. Equipped with several pre-recorded test cases that can be deployed out of the box, this tool allows retailers to validate patches quickly and efficiently.

Anyone Can Automate Testing Tool offers retailers several benefits such as:

Success Stories

American women's apparel retailer achieves 87% productivity gains

A leading US-based women's apparel retailer was using a cloud-based workforce management application to forecast labor requirements and provision staff across their network of over 150 stores based on expected sales. The application also handles the processing of wages. It required manual data entry of certain input parameters, amounting to nearly 300 rows of data for each store. It would take nearly six days to complete this process. The client deployed the AnyOne Can Automate Testing tool and used a bot to automate the above process. It has helped them forecast labor requirements and ensure optimal staffing within 8 hours, saving more than 87% time.

Retailer accelerates transaction error processing by 70%

A leading retailer in North America specializing in counterculture-related clothing, accessories, and licensed music faced a large volume of ReSA errors on sales transactions due to marginal differences between tender amounts and calculated retail value in their order management system. The number of errors ranged from 600-1200 per day and needed manual resolution involving several steps. The client leveraged Infosys Anyone Can Automate Testing Tool by Infosys to automate the resolution, resulting in 70% time savings.

American discount retailer automates stockout reconciliation

A leading US-based discount retailer faced delays in reconciling their stockouts at the end of the month. The presence of unused stock counts needed to be deleted manually as open stock counts could result in month-end activity failure. The retailer leveraged Infosys Anyone Can Automate Testing Tool to automate the deletion of unused stock counts. It led to smoother month-end activities with 70% time saved.
