XtRegisterGrabAction − register button and key grabs

void XtRegisterGrabAction(*action_proc***,** *owner_events***,** *event_mask***,** *pointer_mode***,** *keyboard_mode*)
    XtActionProc *action_proc***;**
    Boolean *owner_events***;**
    unsigned int *event_mask***;**
    int *pointer_mode***;**
    int *keyboard_mode***;**

action_proc   Specifies the action procedure to search for in translation tables.

action

event

params

num_params   Specify arguments to **XtGrabButton** or **XtGrabKey**

XtRegisterGrabAction adds the specified *action_proc* to a list known to the translation manager.
