SAMSUNG

Software Customization Services

Build bespoke device software to your exact needs

Software Customization Services enhance your capabilities in mobility by putting custom devices at the core of your tactical ecosystem.

Revolutionize your device experience by fine-tuning your devices at the most granular level to best serve your every need.

You can even extend the lifecycle of your devices with up-to-date security and feature optimization.
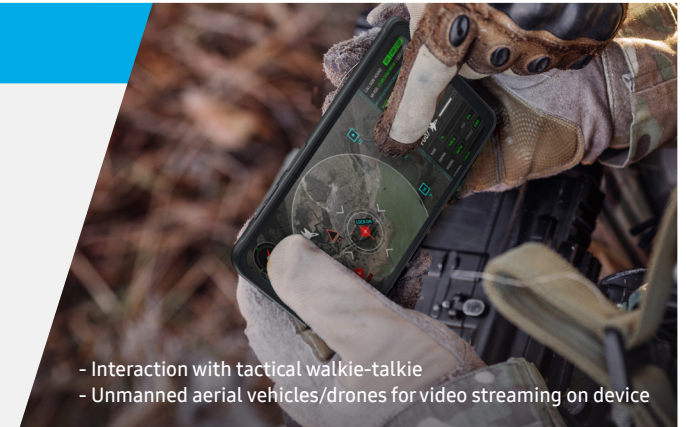

What will be yours?

Bespoke software and binary customization on off-the-shelf devices

Custom Fit for Tactical & Classified Use

Place devices at the core of your tactical ecosystem and maximize mobility

- Customize mobile devices to work with tactical peripherals when connected
- Adjust device software to access private & highly classified networks
- Recognize and set policies for each connected peripheral with USB connection management

- Interaction with tactical walkie-talkie
- Unmanned aerial vehicles/drones for video streaming on device

Design Your Own Device Experience

Revolutionize device experience by fine tuning devices for every need

- Context-based and automated device control extending beyond the device
- Configurable touch sensitivity
- In-depth UX customization on off-the-shelf devices only available with SCS (Software Customization Services)

- Automatic device turn-on when vehicle door opens (Allowing rear seat passengers to control air conditioner, lights and play music)

Enhanced Maintenance & Security

Extend the lifecycle of your customized and off-the-shelf devices

- Maintenance releases on customized software
- Extended & more frequent security maintenance releases for commercial off-the-shelf devices (up to 5 years)

- Ongoing security patch for enterprise devices
- Extend security patch for CL(i.e. inventory check) device
