

MiFID II Reference Data

The MiFID II / MiFIR regulatory framework has been introduced to bring greater transparency, safety and more resilience to the financial markets. The regulation brings enormous complexity for firms throughout the industry in terms of generating, collecting and processing financial data.

As a leading global provider of reference data and with a long history with regulations, we have developed complete data sets relevant for Investor Protection and Transparency, Transaction and Reference Data Reporting obligations stated in the various regulatory technical standards (RTS).

SIX provides more than 530 data fields - discover a flavor of our offering below.

MiFID II Reference Data

For Investor Protection

Ask us how we can help

To help financial institutions with MiFID II, SIX has engaged clients with interviews, workshops and formed the SIX MiFID II Working Group with specialists from international financial institutions.

We can therefore deliver accurate and high quality reference, listing, and market data for all asset types over all instrument life cycles, including corporate actions, concentrating on Transparency, Transaction and Reference Data Reporting as well as Investor Protection.

Contact a SIX sales representative and find out how we can help you with MiFID II compliance: sales.global@six-financial-information.com
