

SIX Global Equity Indices

The SIX Global Equity Indices Ensure Broad Coverage with High Comparability to Established Indices.

With the SIX Global Equity Indices, SIX offers investors access to the world's most important equity markets. Thanks to a recognized methodology, the SIX Global Equity Indices are highly comparable with established indices.

The SIX Global Equity Indices consist of indices with a fixed or variable number of components that aim to capture the broadest market representation for a diversified set of large geographic regions, or the most representative companies of geographic or economic agglomerations from medium- to country-level. The SIX Global Equity Indices are calculated in USD, EUR and CHF, with country indices also available in the respective local currency. All indices are available in price, net and gross return variants.

Established Index Methodology

- **SIX World Indices**

The World Indices comprise indices with a variable number of components that aim to provide the broadest market representation for a diversified set of major geographic regions.

The indices are reviewed on a semi-annual basis in June and December and their components weighted by free-float market capitalization. No capping applies.

The SIX World All Country Index selects companies worldwide, with criteria aimed at reaching a free-float market capitalization coverage of at least 90% for Developed Markets countries and 80% for Emerging Markets countries. Buffers are set to limit the fluctuation of components at the lower end of the capitalization spectrum.

Your Advantages at a Glance

- ↳ Global index offering with a comparable risk/ return profile to established indices
- ↳ Everything from a single source – SIX acts as a one-stop provider for index values, index constituents, share prices, reference data and delivery channels (Web API)
- ↳ Reduced administrative effort and increased cost efficiency thanks to a simple license model
- ↳ Can be used for display purposes, benchmarking, active portfolio management and passively managed financial products

The remaining indices in the family are derived from the SIX World All Country Index by filtering its composition to reach the desired geographic coverage.

- **SIX Broad & Blue-Chip Indices**

The SIX Broad & Blue-Chip Indices have a fixed number of components that aim to capture the most represen-

tative companies of geographic or economic agglomerations from regional to country level.

The review frequencies are set individually and the index components are typically weighted by free-float market capitalization, although some indices are offered as price weighted. Depending on the individual index, criteria that capture the companies' size or liquidity may apply, as well as buffers to limit the fluctuation of components at the lower end of the selection spectrum, and capping mechanisms to limit the risk of concentration.

The Delivery Channels of SIX

- **SIX Web API**
Delivery of index values and data on index constituents (intraday delayed, end-of-day), regulatory and tax data
- **SIX Index Data Center and Ultimus**
Composition and weights available for start-of-day/end-of-day
- **SIX ApiD**
Delivery of index values (intraday delayed, end-of-day)
