

Cradlepoint for Business Internet

Keep your business connected and secure with T-Mobile Business Internet and the Cradlepoint E320 enterprise router. Get reliable fixed wireless internet virtually anywhere on our nationwide network with the integrated capabilities you need to run your business applications with confidence.

Connectivity that scales with your business

Take advantage of our nationwide reach for connectivity where you need it. And with the Cradlepoint E320 router pre-configured by T-Mobile, you can roll out new sites without requiring IT staff there to meet them. This provides the flexibility and agility required to rapidly expand your business.

Enterprise-grade solution

Robust features and flexible configurations address a variety of use cases for your business from primary connectivity to failover protection.

Highly secure

The built-in security features of the Cradlepoint E320 router, such as integrated firewall and intrusion detection/protection, help provide the security you need to help protect your business and endpoints.

Accelerated time to service

Cloud-driven pre-configuration by T-Mobile system engineers reduces the burden on your IT staff and enables zero-touch deployment of connectivity across hundreds—or even thousands—of sites.

OpEx instead of CapEx

A fixed monthly charge eliminates the need for a hefty upfront hardware purchase and makes budgeting simple.

Notable features of the Cradlepoint E320 router

- All-In-One primary connectivity solution includes routing, security and Wi-Fi.
- Embedded 5G for high-bandwidth, low-latency performance (also 4G LTE capable).
- Enterprise-grade security including stateful firewall, intrusion detection/prevention, and port security.
- Integrates into virtually any existing networking and SD-WAN environment.
- Zero-touch deployment to enable rollout at scale without IT staff needed on-site.

Connectivity that meets your needs.

Don't let the limitations of legacy providers hold you back. The robust integrated features of the Cradlepoint E320 router combined with the nationwide availability of T-Mobile Business Internet provide solutions for a variety of common business use cases.

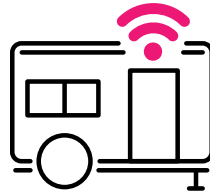

All-in-one connectivity

Primary fixed wireless access for branches or stores that require dedicated routing and high availability across numerous locations

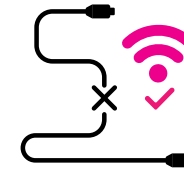

Connected digital environments

Dependable and agile wireless networking for organizations that are required to bring their own network

Day one connectivity

Out-of-the-box 5G or 4G LTE connectivity or redundancy when wireline service is unavailable or cost-prohibitive

Wireless failover for business continuity

Augmentation of a primary wired broadband link with fixed wireless failover for highly resilient hybrid connectivity
