

Identity Verification Suite for a secure and simple digital onboarding

Need to easily prove your identity when remotely onboarding a service?
Online ID verification allows you to do this whenever and wherever you are.

Login to the service provider's mobile application

1 Identity document capture

Leverage AI to automatically detect your ID.
Benefit from an instant capture and real time quality checks for a smooth user experience.

For electronic documents, use your NFC capable phone to read the chip information.

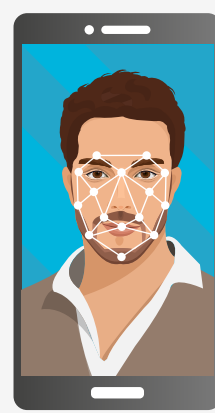

2 Document verification

Thales will check the authenticity of the document to prevent fraud by verifying data integrity, consistency and security elements.

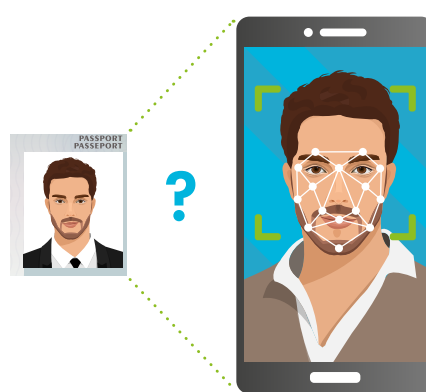

3 Face capture and liveness detection

Adopt facial biometrics: Just take a selfie!
Passive liveness detection requires no user interaction.
It ensures that a real person is physically present, and detects any spoof attack.

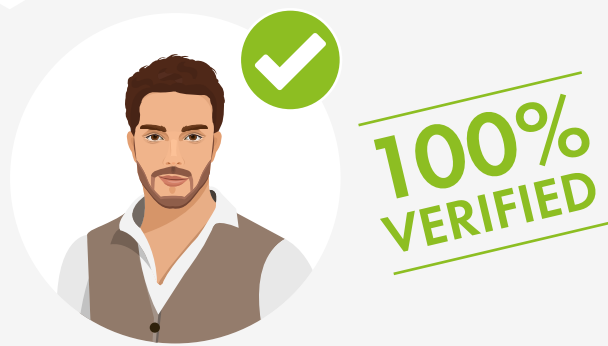

4 Face matching

Benefit from an in-house technology which examines the likelihood that the captured person is the same person as the one on the ID document.

**Your identity is verified:
you are now enrolled
to the service!**

Industries and use cases: Thales ID Verification Suite at work!

AIR TRAVEL

Eliminate the need for repeated document checks, thanks to a seamless traveler journey

AUTOMOTIVE

For car sharing or car rental, remote ID check without face-to-face in-branch validation
