

DIGITAL DRIVER'S LICENSES

What is a Mobile or Digital Driver's Licence (DDL)?

Digital

A DDL is a highly secure version of your driver's license or ID card on your smartphone

Supplemental

A DDL is a convenient digital companion or secure backup to your plastic card – it does not replace it

Enrollment

When DDL becomes available in your state, you can request a DDL when you apply for a new license or renewal

Optional

You decide if you want to get a DDL and when you want to use it

How would you get a DDL on your phone?

Pair the phone number of your device with your DMV driver's license profile

Install the DDL app on your phone and download your secure credential

Launch the app, authenticate with your fingerprint or PIN

Display the license when you need to, and share information only when you want to

When could you use a DDL?

Benefits of a DDL

Convenient

Your phone is always with you. In fact, people are more likely to notice they forgot their phone than their wallet

Reduces fraud

It's easy, fast and far more reliable to verify a DDL is valid – even for out-of-state credentials

Easy to renew or revoke

DMVs can update the DDL remotely and send you timely alerts

Increased privacy

Share only the personal information relevant to the situation you're in

Is it secure?

- A DDL is far less susceptible to fraud than a typical physical DL/ID. It's protected by high-tech security features and strong authentication not available on plastics.
- A DDL provides the highest level of security in credential storage, data transmission and verification.

How is privacy ensured?

- No geolocation tagging
- No tracking of your device or DDL usage
- Not accessible by third parties without your consent
- Your phone always remains in your hands
- You control when to show it
- You control which data to share

What do I do if...

My phone battery is dead?

You won't be able to display your DDL without having power on your device. Present your DL/ID card or have the officer manually look you up.

I'm out of coverage?

Your DDL is encrypted and securely stored on your device. It is always accessible and usable; no cell phone service needed.

My phone is lost or stolen?

The DDL cannot be accessed without your PIN or fingerprint. It can be remotely deactivated and wiped almost instantly from the phone.

I switch to a new device or operator?

DDL will work with virtually any smartphone and network provider. On a new device, download the app and reload your DDL once you're authenticated.
