

4 Reasons to Leverage Veeam-powered Backup-as-a-Service for Microsoft 365

When considering the massive amount of data that is housed within Exchange Online, SharePoint Online, OneDrive for Business and Microsoft Teams across your organization, it's easy to see that Microsoft 365 is a vital workload with little to no tolerance for downtime.

There are a myriad of reasons that leveraging an as-a-service solution can bring peace of mind and help fuel your business:

1 Less Complexity

Leveraging a service provider's infrastructure and expertise to protect your Microsoft 365 data saves you the hassle of architecting and implementing your own solution.

With a Veeam Cloud & Service Provider, you're provided **flexibility** to choose your level of management, including a self-service portal or fully managed and storage options ranging from on-premises to the public cloud.

of organizations use a third-party product or BaaS service to backup M365 data

CPT Report 23

When asked their motivation for leveraging a BaaS/DRaaS solution, on average **30%** of organizations cited freeing up internal resources to focus on strategic/internal projects.

2 Save Time

Outsourcing your Microsoft 365 data protection efforts grant your internal resources the freedom to focus on other value-add activities that drive your business forward.

Our global network of Veeam Cloud & Service Providers provide a range of turnkey solutions with **instant provisioning** for quick deployment, and with the confidence of **reliable backup and restores** you can set it and forget it.

3 Accidental (or Deliberate) Data Loss

Microsoft 365 is designed for the everyday user, and oftentimes it's leveraged by entire workforces. However, the accidental deletion of an email or malicious deletion of a critical SharePoint file can cause headaches and legal issues.

A **self-service restore portal** empowers you to access, monitor and manage your Microsoft 365 backups, and **granular restore options** allow you to quickly retrieve your data when you need it.

The third most common cause of outages over the past two years was accidental deletion, overwrite of data or data corruption

4 Security and Compliance

Security and compliance may seem like obvious impetuses for an as-a-service solution; however, Microsoft 365 data is often overlooked. All data is vulnerable to ransomware and subject to compliance requirements, so it's vital to include Microsoft 365 in your comprehensive data protection plan.

Ensure that your compliance requirements are met with **unlimited storage** and **customizable service level agreements (SLAs)** to hold years' worth of data.
