

5G Edge Accelerated Access for state/local government

Solution brief

Offices and building locations remain the backbone of the workforce. However, monitoring and managing the flow of traffic in and out of a facility can become challenging and overly complex.

Verizon 5G Edge Accelerated Access is an end-to-end access control solution that expedites physical access for individuals using opt-in facial authentication and real-time validation.

5G Edge Accelerated Access enables employees and guests to safely pair their credentials and IDs with their face, increasing accountability and security while simplifying access management for all controlled entrances.

Features

Access control

Reduce the risk of misplaced or misused credentials by replacing employee IDs with their face, and enhance your existing access control solutions with:

- Touchless access control for employees and guests to help increase safety and accountability
- A simple and convenient method for entry into government locations such as police stations, IT areas, courthouses and libraries
- Manage visitors and guests by using 5G Edge Accelerated Access for two-factor authentication
- Enable the ability to receive alert notifications when important guests have arrived

Credentialing and identity verification

Increase organization accountability by ensuring that only those with the right credentials can enter restricted areas by:

- Using opt-in facial authentication to verify and simplify access to an office
- Maintaining centralized ID lists to ensure that each person has one ID across all spaces
- Aggregating credentials from multiple access control systems into a single system to streamline management

Primary benefits

The 5G Edge Accelerated Access opt-in facial authentication service enables touchless door entry while leveraging simplified credentialing to enhance facility security.

100% opt-in

Offers a simple, opt-in registration process

Seamless integration

Integrates with existing building entry software and hardware systems

Enhanced security profile

Increases accountability for those entering the building

Cost-efficient

Does not require large capital investment

Quick deployment

Reduces disruption and downtime through rapid deployment and scalability across locations

Time-stamped entry

Enables you to know who is in the building and when

Verizon is leading the way with next-generation offerings, experience and expertise to help you design, deploy and manage solutions that help meet today's challenges and position your organization for the future.

Contact your Verizon Government Sales Representative to learn more about what this and our other mobile edge computing solutions can do for you and your organization.

5G access requires a 5G-capable device in a 5G coverage area.

Solution is available to U.S. state and local government customers and educational institutions using public funding only in the following states when purchasing on a standalone agreement on commercial terms: Arkansas, Hawaii, Iowa, Kansas, Kentucky, Louisiana, Montana, New Mexico, North Dakota, Tennessee, Washington and Wyoming. Solution is available to privately funded educational institutions and supporting organizations (e.g., athletic boosters groups) on commercial terms in all 50 states.
