

**Your network powers your business. When you have aging customer premises equipment (CPE) or don't have the cabling systems that your network demands, it can prevent you from taking full advantage of advances in communications technology and applications. It's critical to keep your equipment up to date. If you have to engage and manage multiple vendors to stay current, it can slow down your network—and your business.**

**When you rely on our Edge Solutions, you'll be able to leverage our experience preparing, deploying, managing and maintaining complex technologies. We can help you free up valuable resources so you can spend more time focusing on strategic initiatives. Get the end-to-end CPE support you need, whether you're adding new equipment or managing the maintenance of existing equipment.**

---

## **Site Services – Site Preparation and Structured Cabling Services**

When adding the latest hardware, applications and networking technologies, avoid delays and the headaches that arise from improperly prepared facilities. Our specialists take the complex and detail-heavy logistics off your hands. We handle site surveys and readiness, wiring and complete structured cabling to help limit downtime and keep your employees on task. Our Site Preparation and Structured Cabling Services can dramatically ease your path to the advanced services that drive improved productivity.

Site Preparation Services are designed to fit your business needs. With Verizon's Structured Cabling Services, an engineer certified by Building Industry Consulting Services International (BICSI) will work with you to complete a cabling solution that matches your specifications. Our direct relationships with equipment installers, manufacturers and suppliers enable us to deliver a cabling system that can support your current and future requirements.

---

## **Deployment Services**

After we've helped make sure your facilities are ready, the next

step is deployment. We have the most current technology, strong relationships with leading original equipment manufacturers (OEMs), and the experience to help manage your network deployment projects. With our Deployment Services, we begin by preparing your networking equipment in our state-of-the-art staging facilities, where we'll power up your equipment, inspect it, make necessary configurations, and then package it back up and promptly deliver it to your facilities. In coordination with the network service deployment, we'll dispatch one of our field technicians to help support the installation of your networking equipment.

---

## **Maintenance Services**

Tying up your network personnel with day-to-day equipment maintenance and inventory duties isn't the best use of your time or money. Verizon maintenance plans can cover your network equipment by troubleshooting and, if needed, sending replacement parts and a field technician to complete repairs. And if you're a Unified Communications and Collaboration as a Service (UCCaaS) or Virtual Communications Express customer, our Warranty Service provides next-business-day advance parts replacement for IP phones directly to your doorstep (available to U.S. sites).

---

## **Why Verizon?**

You want a partner with the knowledge and experience to provide a complete solution for your networking equipment. Experience speaks for itself. We have been performing site preparation services, deployment services and maintenance services for networking equipment for decades.
