2002 Products

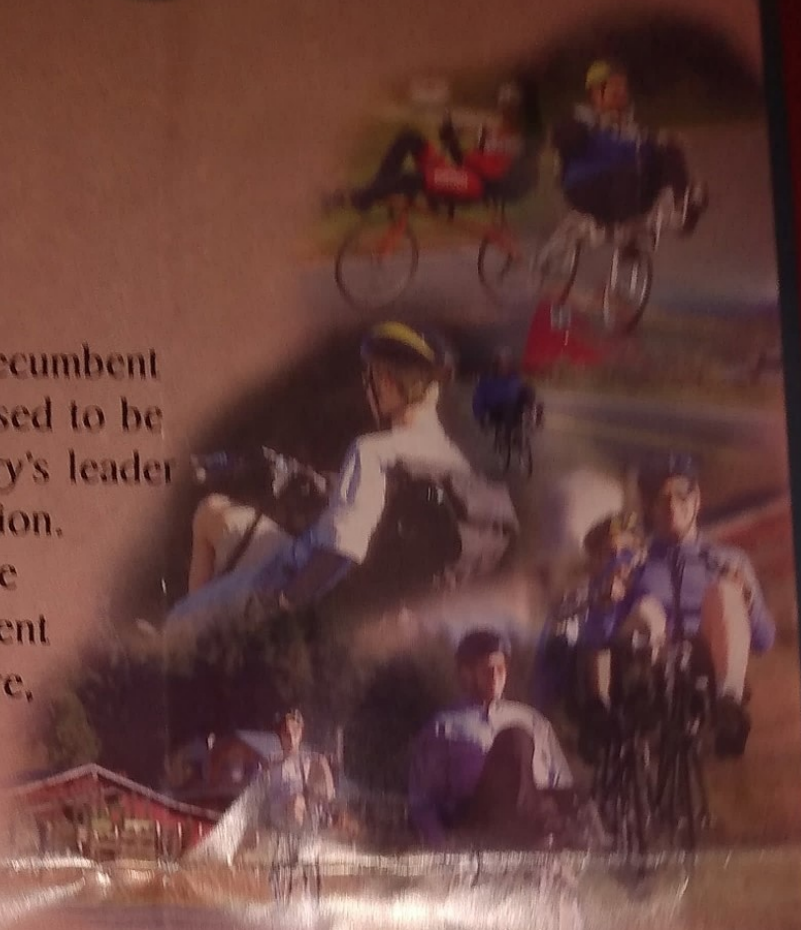

**Comfort...
without
Compromise**

New for 2002

Vision Recumbent Bicycles is pleased to introduce its product lineup for 2002. We are very excited this year about our new products and features. Here is an overview of what you can find for 2002 from America's premier recumbent manufacturer—Vision Recumbent Bicycles.

Instant Sizing.

All of our 2002 recumbent bikes (excluding the tandems) feature the improved Quick-Adjust system. With this system, fitting the bike to your leg length has never been easier. To adjust the bike for the rider's leg length, simply flip open a single quick-release lever and move the crank position. Tighten the quick-release lever and you are ready to ride. There is an index tab built into every boom to keep the pedals aligned, and the system keeps the drivetrain working perfectly with no chain adjustments needed. If you are the only rider using the bike, and want to eliminate the slight added weight of the system, it is removable.

...easier. To adjust the bike for the rider's leg length, simply flip open a single quick-release lever and move the crank position. Tighten the quick-release lever and you are ready to ride. There is an index tab built into every boom to keep the pedals aligned, and the system keeps the drivetrain working perfectly with no chain adjustments needed. If you are the only rider using the bike, and want to eliminate the slight added weight of the system, it is removable.

New Frame design.

All of our single bikes now feature our AirLight 2" tubing on an elevated chainstay frameset. We've increased torsional rigidity of the bikes while improving chain clearance. These bikes all maintain the seat height of the earlier models.

26" Sabers.

The entire R60 line of bikes have been redesigned to accept 650C (571) wheels, and the rear wheels are standard dishing. This allows for the use of a wide range of aftermarket aerodynamic wheelsets and improved tire availability.

Thoroughbreds.

Perhaps the biggest change for 2002 is the all new Thoroughbred line of upright bikes. Taking our experience with comfortable designs, and being willing to look "outside the box" has led to the development of these bikes. Comfortable and efficient, the Thoroughbreds are the perfect bikes for riders who want a more comfortable ride while maintaining the familiar feel and look of an upright bike.

70 Thoroughbreds

- Upright bikes with the comfort of recumbents.
- The top tube and seat are low, for easy mounting and safe riding.
- The rider's weight is shifted off the hands for comfort and safety.
- With a head-up riding position, you can enjoy the view.
- Excellent aerodynamics make for a fast ride.
