

SBDB SeatBag

This bag *REQUIRES* the *WaterBack* (SBWB) to attach to your Vision bike. It will not attach to your bike without the *SeatBack* core: the *WaterBack*.

To mount your *SeatBag*, follow these instructions:

1. Check the *WaterBack*. This unit is designed to attach to the Vision *WaterBack*. Make sure your *WaterBack* is installed correctly on the seat.

2. Attach the hook & loop straps. At the top of the *SeatBag* are two straps with hook & loop material stitched to them. Pull these open, and thread them through the two buckles on the back of the *SeatBack*. Pull the straps down until the buckle is against the *SeatBag*, and press the hook & loop material together.

3. Attach the lower straps. Unbuckle the two straps that hold the *SeatBag* flap closed. Thread these behind the lower seat cross rail and re-buckle them. Your *SeatBag* is now attached.

There is a shoulder strap included with your *SeatBag*. Be sure to detach this at both ends and store it safely inside one of the *SeatBag* pockets before riding. The two external mesh pockets can be used to carry water bottles, and there is an internal pocket that will carry a 2 liter "wide" style water bladder. We stock these (WBLTR) if you need extra water capacity on your rides.
