ee) **Swift Flow lanes**

Service Provider shall convert existing lanes into swift flow lane concept at fee plazas with high traffic volume. (As per Annexure-6) This involves shifting RFID reader location and related activities to the current Electronic Toll Collection (ETC) system setup as per the indicative layout outlined in Annexure-5. The primary goals of these swift lanes are to facilitate uninterrupted traffic flow for active FASTag vehicles, presently validated at Payaxis, and to expedite the validation process.

i. **Features:**

- RFID reader will be relocated to a distance of around 10-12 meters (may be decided by Service Provider) before the payaxis. It will be mounted on a single arm pole with a minimum height of 5.5 meters.
- Vehicle Separator, equipped with IR/Laser sensors, will be installed approximately 2 meters ahead of the RFID reader pole. This setup is crucial for vehicle detection, separation, and identifying vehicle directions to streamline toll operations rapidly. Any necessity for loop installation near the vehicle separator is at the sole discretion of the Service Provider.
- A presence loop shall be installed near pay axis area to trigger LPIC/ANPR camera.
- Ensuring effective vehicle detection and separation, particularly in tailgating scenarios, with a minimum distance of 10 cm or more.

ii. **Objective**

The primary objective of implementing the swift flow lane is to enhance the traffic throughput within that specific lane. To achieve this, the automatic barrier gate in the swift flow lane shall remain open in normal condition to allow continuous movement of vehicles affixed with active FASTag, eliminating the need to stop at the toll booth for FASTag validation.

A crucial function of this system is the automatic barrier gate, which will promptly lower whenever a vehicle with an inactive/invalid FASTag or without any FASTag attempts to enter the swift flow lane. This mechanism ensures that only vehicles with active FASTag can freely pass through without any interruption, maintaining the swift flow.

To manage the queue of vehicles and ensure seamless operations, the Vehicle Separator shall play a vital role. It is responsible for detecting, separating, and identifying vehicles within the lane. This allows for efficient queue management and helps in promptly lowering the barrier gate for vehicles without active FASTag, preventing any disruptions to the continuous flow of traffic in the swift flow lane. The combination of an open barrier for active FASTag vehicles and a closed barrier for inactive or non-FASTag vehicles, along with the assistance of the Vehicle Separator, contributes to the overall objective of enhancing traffic throughput in the designated lane.

Additionally, the Service Provider shall ensure to provide three (03) sets of six (06) transverse bar markings both before and after the bullnose in the Swift Flow Lanes. Moreover, the Service Provider shall be responsible for placing Chevron Markings ahead of the bullnose in Swift Flow Lanes.
