Moon Cactus  
The Moon Cactus glows red because it lacks chlorophyll and must be grafted onto other cacti for it to grow.

Le cactus fraise  
Le cactus fraise est rougeâtre, car il ne produit pas de chlorophylle. Il doit être greffé sur d'autres cactus pour pouvoir se développer.

Cactus bola de rubí  
El cactus bola de rubí es de color rojo brillante debido a que no puede producir clorofila y, por tal motivo, es necesario injertarlo en otra cactácea para que sobreviva.
