## PASIÓN POR LAS FLORES

🌸 "Tanto si estás ampliando tu vasta colección LEGO® Botanical como si este set marca tu inicio en el mundo de los arreglos florales LEGO, es muy probable que las flores te causen la misma fascinación que a nosotros. La fresca combinación de este ramo bien podrías haberla recogido tú en un prado o jardín. Los colores y las variedades complementarias, provenientes de todo el mundo, están cuidadosamente seleccionados para celebrar la biodiversidad de nuestro planeta y la reconfortante belleza de la naturaleza que tanto apreciamos.

¡Que disfrutes construyéndolo!".

# HELECHO HOJA DE CUERO

*(Rumohra adiantiformis)*

✿ El exuberante y frondoso helecho hoja de cuero, autóctono en la mayoría de los climas tropicales del hemisferio sur, goza de una gran popularidad entre los propietarios de jardines de todo el mundo. Si bien no produce flores, su tupido follaje es muy apreciado en la industria de las flores cortadas como decoración complementaria para arreglos florales.

# PERIFOLLO VERDE/ ENCAJE DE LA REINA ANA

*(Anthriscus Sylvestris)*

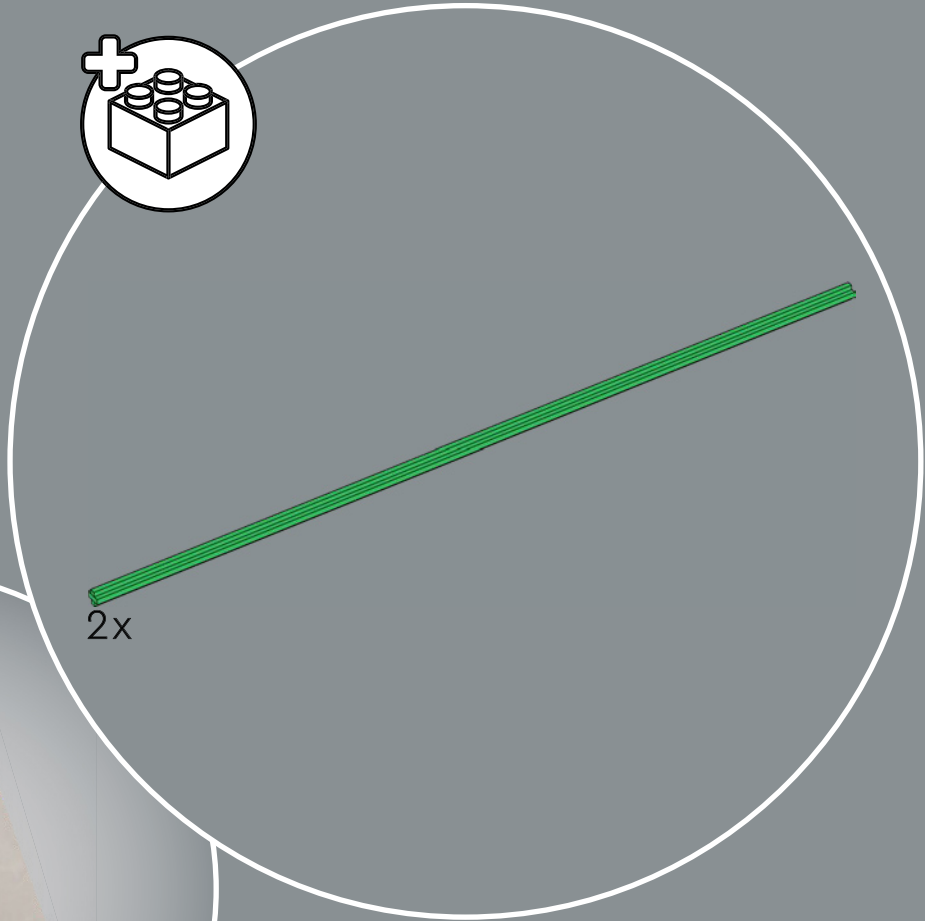

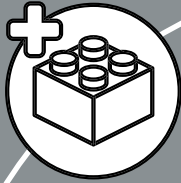

✿ Es común encontrar este vaporoso cúmulo de pequeñas flores blancas en zonas umbrías a lo largo de Europa, Asia y África. Semejante a un espectáculo de fuegos artificiales, su tupida floración es un festín para las abejas, polillas, mariposas y otros insectos que buscan polen en los primeros días de la primavera. ¿Pero sabías que también se utiliza como repelente de mosquitos?

# AMAPOLA AMARILLA

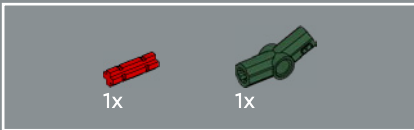

*(Meconopsis cambrica/  
Papaver cambricum)*

✿ Tanto en las islas británicas como por toda Europa occidental, la primavera y el verano no estarían completos sin la presencia de la sutil amapola amarilla en setos, prados y bordes de carreteras. A pesar de la aparente fragilidad de su constitución y sus pétalos, es capaz de sobrevivir en entornos rocosos con muy poca tierra y en las grietas de jardines y aceras adoquinadas.

El elemento con forma de hoja de palma se introdujo en los años 90 para el tema LEGO® Pirates. Se le ha encontrado un nuevo uso recreando el helecho hoja de cuero.

El apodo *encaje de la reina Ana* se remonta varios siglos atrás, cuando se decía que las plantas florecían al paso de Ana, la reina de Gran Bretaña (1702-1707), y sus damas de honor, deseosas de fundirse con la belleza de sus vestidos de encaje.

8

# ACIANO

*(Centaurea cyanus)*

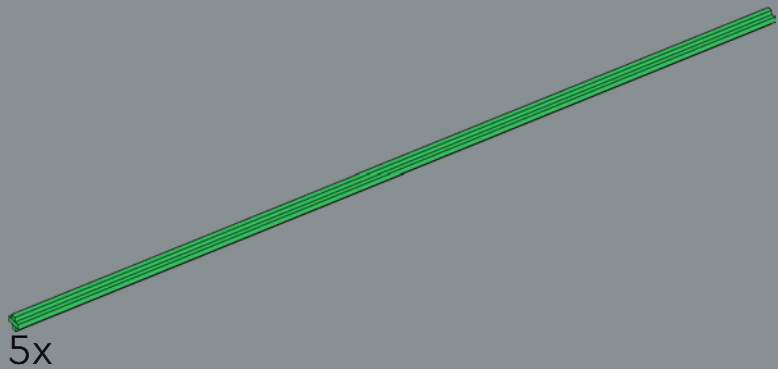

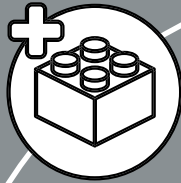

✿ Ligeros como el papel, los acianos decoran prados y jardines con sus brillantes tonalidades de blanco, rosa y azul desde el inicio y hasta mediados del verano, particularmente en Europa, Norteamérica y Asia. Su delicada fragancia y su néctar atraen a mariposas y abejas, por lo que son un complemento ideal para tu jardín o huerto de verduras.

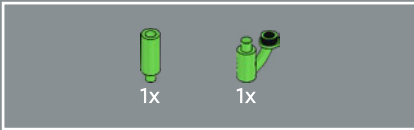

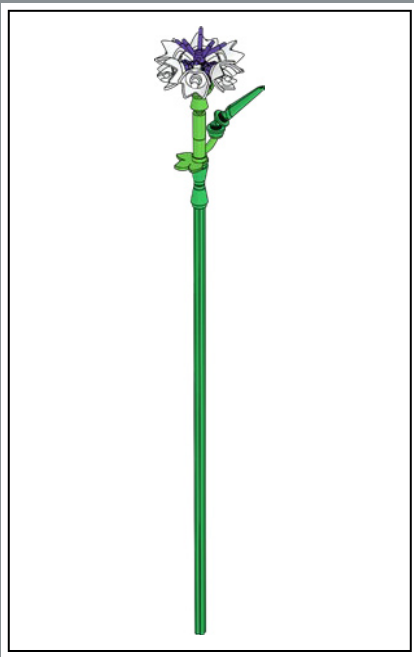

# LAVANDA

*(Lavandula)*

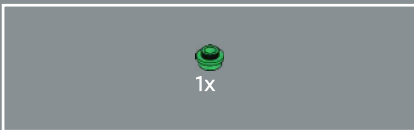

✿ Un arbusto perenne con brotes de colores violeta y un relajante aroma, la siempre vistosa lavanda es tan práctica como atractiva. Originaria del Mediterráneo, Oriente Medio y el norte de África, se utiliza ampliamente como hierba aromática para cocinar, para la destilación de aceites esenciales para cosméticos y en la fitoterapia.

The LEGO Group está trabajando en la construcción de un futuro más sostenible para los niños. En la actualidad, más de 80 elementos LEGO® (como árboles, hojas y arbustos) se fabrican a partir de plástico de origen vegetal producido con caña de azúcar procedente de fuentes sostenibles, lo que da nombre a nuestra iniciativa: Plantas con Plantas. Estos elementos representan los primeros pasos de una misión de mayor envergadura cuyo objetivo es que los ladrillos LEGO se fabriquen a partir de fuentes sostenibles antes de 2030.

# LUPINO

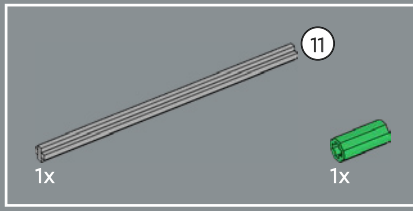

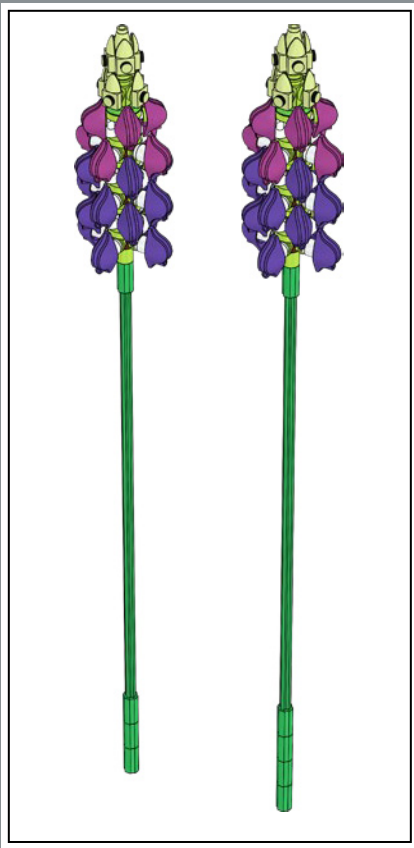

*(Lupinus)*

🌸 Originarios de Norteamérica, los lupinos son capaces de vivir en estado salvaje también en Europa y alrededor del Mediterráneo. Sus iridiscentes puntas se alzan para atraer la atención de los polinizadores (y la nuestra) a lo largo y ancho de las praderas de Norteamérica, al lado de las carreteras y en jardines de todo el mundo.

## ESPUELA DE CABALLERO

(*Consolida ajacis*)

✿ La espuela de caballero nos regala vistosos mares de flores silvestres en un amplísimo espectro de tonalidades azules que se apoderan de prados y jardines de todo el hemisferio norte. Su ciclo anual comienza a inicios de la primavera y, al igual que sus parientes cercanos de hoja perenne del género *Delphinium*, aportan altura y un vaporoso y elegante toque de color a tu ramo.

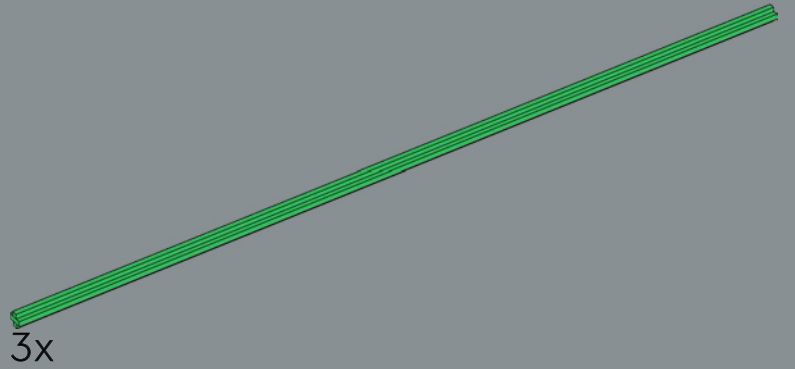

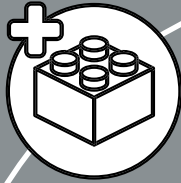

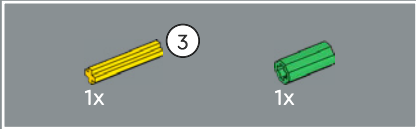

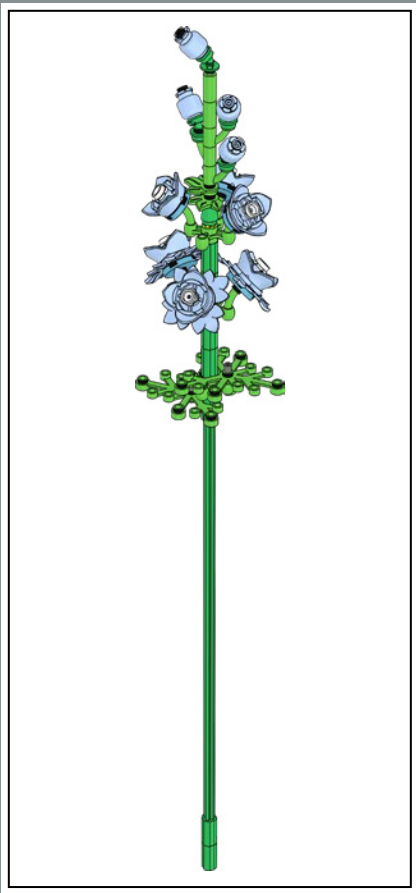

## GERBERA

(*Gerbera jamesonii*)

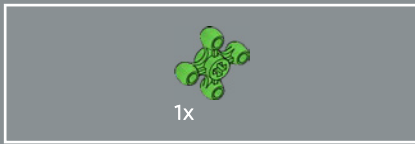

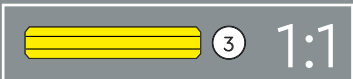

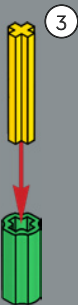

✿ Prima del girasol, la lustrosa gerbera viene en tonalidades tan variadas como las del arcoíris. Originaria del sur de África, también se la conoce como *margarita africana* o *margarita del Transvaal*. Con su delicado aroma y una majestuosa corona elevada bordeada por pétalos suaves como el terciopelo, es capaz de llenar de luz cualquier jardín, prado o ramo.
