Special Slope Conditioning – (Alberta Only – excluding the City of Edmonton)

ITEM
443.1

Service Description

Provides for the additional slope conditioning required to condition one (1) 4-wire voice-grade Local Channel to the attenuation requirement (Parameters: End-to-end maximum loss of 10 dB; and attenuation between 500 - 2800 Hz does not exceed +3 dB to -1 dB, relative to 1000 Hz.) specified by the Customer.

The end-to-end connection so conditioned is used by the Customer as a dedicated connection for alternate use of voice and data communications between its premises and the premises of its private line subscribers, or between two of its premises. The dedicated connection provided in association with this Tariff Item does not allow access to the Company's PSTN.
