

## Oracle Requests Specific Order

grasp (  )

place (  on  )

grasp (  )

place (  on  )

move ( home )

## Neural Network Predicts Goal Pose

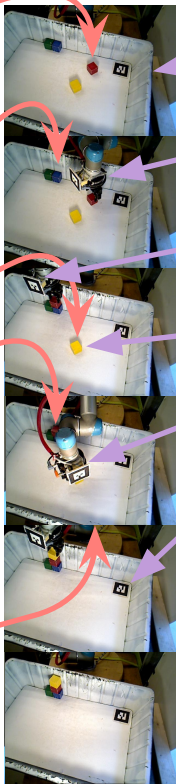

### Input Measurements

- Current Robot Pose
- Initial and Current RGB Images

### Network Must Learn

- Pose constraints due to bin wall
- Color and shape of specific blocks
- Pose of gripper for grasping, reorienting, & placing objects
- How to balance specific blocks
- Object Occlusion
- How to release blocks and leave the scene without toppling the tower

## Robot Moves

## Dataset Challenges

Bin is inside workspace where it can shift

Contact allowed but trial ends at force limit

Orientation matters, asymmetrical gripper

Network has no explicit object model

Robot occludes objects

AR tags are not an input to the network

Sunlight varies greatly

Robot leaves to prove the stack stands

Blocks can be on edge, full 3D gripper motion required
