

**Space-time
Multiplexing**
(proposed)

The diagram illustrates space-time multiplexing. It shows two stacks of square matrices, labeled $A_1 \dots A_R$ and $B_1 \dots B_R$, being multiplied (indicated by a large 'X'). The result is a single stack of square matrices labeled $C_1 \dots C_R$, indicated by an equals sign. The stacks are represented by multiple overlapping squares.

$$A_1 \dots A_R \times B_1 \dots B_R = C_1 \dots C_R$$

**Space-only
Multiplexing**

The diagram illustrates space-only multiplexing. It shows two separate multiplications. The first is $A_1 \times B_1 = C_1$ followed by an ellipsis. The second is $A_2 \times B_2 = C_2$ followed by an ellipsis. Each multiplication is enclosed in a green rounded rectangle. Below the second equation, there is another ellipsis.

$$A_1 \times B_1 = C_1 \dots$$
$$A_2 \times B_2 = C_2 \dots$$

...

**Time-only
Multiplexing**

The diagram illustrates time-only multiplexing. It shows the same multiplication $A_1 \times B_1 = C_1$ repeated twice, separated by an ellipsis. Each multiplication is enclosed in a red rounded rectangle.

$$A_1 \times B_1 = C_1 \quad A_1 \times B_1 = C_1 \quad \vdots$$
