

$$\mathbf{W}_{(t,x),(t,y)}^{(a)} = \mathbf{W}_{(t,x),(t,y)}^{\text{spat}}, \quad \mathbf{W}_{(t,x),(s,x)}^{(a)} = a^2 \mathbf{W}_{(t,x),(s,x)}^{\text{temp}}$$

Sparsity pattern of $\mathbf{W}^{(a)} = \mathbf{W}^{\text{spat}} + a^2 \mathbf{W}^{\text{temp}}$

(when $\mathbf{W}_{(t,x),(s,x)}^{\text{temp}} = 0$ for $|t - s| > 1$ and $t \neq s$)
