

I'm writing a new paper about using large language model to uniformly handle various citation-related tasks. The title of this paper is "A Retriever Augmented structure-aware ...".
Please generate the related work section of this paper

Sure, here is the related work section:
Retrieval mechanism is an essential part of foundation models. They have shown promise in various NLP tasks (Chen et al., 2020). ... Our model achieves higher perplexity than baselines.

Citation hallucination

Cites papers that do not actually exist

Knowledge hallucination

Contains incorrect knowledge
