

## Software Specs

Create a Snake game where a player navigates a snake across a grid to consume food, growing in size while avoiding self-collision and wall hits. Implement basic elements like a moving snake, randomly placed food, and game-over logic. Ensure smooth controls for direction changes and visually distinguish between the snake, food, and game area. Optionally, introduce features to enhance gameplay, such as difficulty levels and score tracking.

## Team Roles

Product Manager  
(PM)

Scrum Master  
(SC)

Developer  
(Dev)

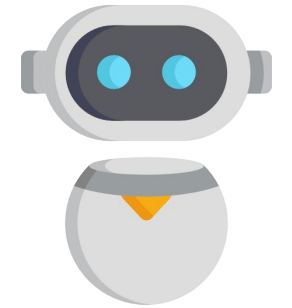

Senior Developer  
(SeDev)

Tester

You are acting as the **Product Owner**, you are familiar with product design and software development life cycle ....

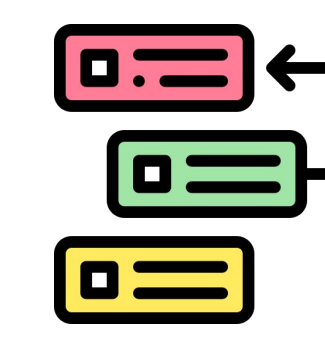

*Role Play*

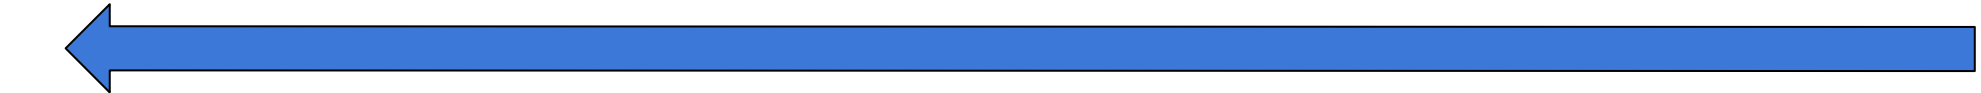

**LLM as Agent**

PM

"I've created a list of features for this software. Let's break them down into tasks and put them in the backlog. We will have a sprint kickoff and begin working on this product."

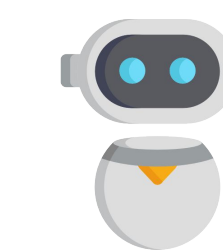

PM

"Following the sprint review section, we must continue with the remaining tasks in the backlog. Let's proceed to the next sprint."

PM

"We've completed 4 features for this product, However, there are a few tasks in the backlog that require adjustment. Let us replan and proceed to the next sprint."

PM

"No further sprint is required because all of the backlog requirements have been met. Enjoy the game !"
