

$$W(\Theta) = \left(\begin{array}{ccc} 1 & \dots & 0 \\ \vdots & & \vdots \\ \vdots & & \vdots \end{array} \right) \begin{array}{l} n = 0 \\ n = 1 \\ n = 2 \\ \dots \\ n = k \\ n = k + 1 \end{array}$$

The diagram illustrates a block-tridiagonal matrix $W(\Theta)$ with the following components:

- Matrix Structure:** The matrix is represented as a large left parenthesis followed by a grid of blocks and a right parenthesis. The grid has rows and columns indexed by n from 0 to $k+1$.
- Diagonal Blocks:**
 - W^1 (yellow square) is located at row $n=0$, column $n=0$. Its vertical dimension is labeled d_1 .
 - W^2 (white square) is located at row $n=1$, column $n=1$. Its vertical dimension is labeled d_2 .
 - W^k (orange square) is located at row $n=k$, column $n=k$. Its vertical dimension is labeled d_k .
 - W^{k+1} (white square) is located at row $n=k+1$, column $n=k+1$. Its vertical dimension is labeled d_{k+1} .
- Off-Diagonal Connection:** A red curved arrow labeled φ points from the right side of W^1 to the top side of W^k , indicating a non-zero off-diagonal element between these two blocks.
- Indices and Dimensions:**
 - Row indices are $n=0, n=1, n=2, \dots, n=k, n=k+1$.
 - Column indices are $1, \dots, 0$ (from left to right).
 - Vertical dimensions of blocks are d_1, d_2, d_k, d_{k+1} .
