STATISTICAL REVIEW

WORLD WAR II

A SUMMARY OF ASF ACTIVITIES

**STATISTICS BRANCH, CONTROL DIVISION
HEADQUARTERS, ARMY SERVICE FORCES, WAR DEPARTMENT**

FOREWORD

The Army Service Forces STATISTICAL REVIEW OF WORLD WAR II is not intended either as a history or an analysis, but rather as a reference book--a summary of ASF activities in statistical terms.

Insofar as available data permit, the period covered is the 45 months from December 1941 through August 1945--the period of active participation of the United States in World War II. Most of the time series were initiated at some point after the beginning of the war, as the need for them became apparent. Relatively few are available for the whole span of 45 months. The series are all intentionally ended at 31 August 1945, the nearest month-end to V-J Day (officially 2 September 1945). It is of course true that many activities were then at their peaks and the trend of their decline is not covered in this document. Some demobilization activities had, in fact, not really begun--thus it will be months before the complete series could be recorded.

Except where otherwise noted, coverage is limited to the Army Service Forces, as distinguished from the Army Air Forces and Army Ground Forces, or the War Department proper. The mission of the Army Service Forces has been stated:

"to develop, design, manufacture, or otherwise procure, transport, store, distribute, issue, maintain, repair, and salvage all military supplies and equipment (other than those peculiar to the Army Air Forces) for the Army and, to some extent, for other United Nations; to provide military personnel for the Army and civilian personnel for administrative duties; to train personnel for service units of the Army Service Forces and for the Army Ground Forces and Army Air Forces upon request; to transport men and supplies by rail and water; to provide necessary services for the Army, including administrative, financial, legal, judicial, internal security, and statistical services; to provide for the shelter, health and welfare of Army personnel; to construct new facilities and to provide fixed communication services to the Army."

For the most part the tables included in the appendixes of this volume present only the more significant summary series. They are largely drawn from the thirty-odd monthly sections of the ASF Monthly Progress Report that has covered the various fields of ASF activity.

PROCUREMENT

ASF DELIVERIES

For the war period (December 1941 through August 1945) procurement deliveries aggregated \$68,828,000,000.* Chart 1 shows the monthly deliveries of ASF procured equipment and supplies from January 1942 through August 1945. Indicated on the chart are those important dates in the overseas operations which particularly influenced the volume of production prior to and after the indicated dates. The steady building up of production prior to the North African Invasion is apparent, reaching the 1942 production peak in December. Subsequently, there was a gradual leveling off, although the impetus of the tremendous production drive for the North African operation carried through December 1943. Upon the attainment of the D-Day goal of establishing U.S. troops in France, another great production drive got under way to sustain the European operations and built up to the production peak of the war just prior to V-E Day.

Although production peaks were inspired, for the most part, by operations in the European Theater during the three years prior to

V-E Day, a substantial portion of the production was flowing steadily to our Pacific forces during that entire period. Production kept pace during the months subsequent to V-E Day until the sudden capitulation of Japan prompted immediate cutbacks and cancellations.

The relative annual deliveries of ASF procurement equipment and supplies from January 1941 through August 1945, and forecast deliveries for September through December 1945 are shown in Chart 2.

COMPOSITION OF PROCUREMENT DELIVERIES

The composition of the total value of procurement deliveries for the war period (1 January 1942 through 31 August 1945) is shown in Chart 3 by technical service. It will be noted that Ordnance deliveries constituted almost 50 percent of the total, while Medical deliveries were only slightly more than one percent. Quartermaster deliveries were second in value to those of the Ordnance Department, since they included subsistence which made up 52.3 percent of the Quartermaster total.

CHART 1

ARMY SERVICE FORCES PROCUREMENT DELIVERIES
WAR PERIOD

In general, deliveries are defined as acceptances by the technical services, without regard to the physical location of the items. All the charts and tables in this volume which present dollar value data on procurement deliveries and forecasts are based on standard dollar weights and not on actual

unit costs at the time of procurement. Thus, the trends in procurement activities may be accurately portrayed without distortion by price fluctuations. The standard dollar weights have been revised from time to time, but compensating adjustments have been made accordingly in all related data.

PROCUREMENT

CHART 2

ANNUAL ASF DELIVERIES
(INCLUDING SUBSISTENCE)

Trends in procurement deliveries during the war years for all services and for each of the technical services is presented graphically in Chart 4. It will be noted that the delivery peaks for each technical service occur at different times and that the production trends for one service are not analogous with any other service. Each technical serv-

COMPOSITION OF PROCUREMENT DELIVERIES
DURING THE WAR PERIOD

Service	Amount (Billions)	Percent of Total
4 Ordnance	\$34.084	49.8
5 Quartermaster	21.140	30.9
7 Engineers	4.809	7.0
6 Signal	3.940	5.8
7 Transportation	2.023	2.9
1 Chemical Warfare	1.708	2.5
3 Medical	0.760	1.1

ice had its own requirements goal and was continually faced with the necessity for shifting its production from one to another of its items, in order to meet the immediate and pressing needs of the oversea commands and to keep pace with new item developments. Production lead time was a decisive factor in retarding or speeding up production and this affected the over-all trend in procurement deliveries.

Tables in Appendix A, pages 75 to 81, present a comprehensive record of procurement deliveries by major item groups for each of the technical services, by months for the years 1942, 1943, 1944 and through August 1945.

There follow comments on charts showing deliveries of a few selected important categories of items.

ARTILLERY DELIVERIES

Of the total of all artillery, valued at more than three billion dollars, delivered from January 1942 through August 1945, slightly less than 11 percent, in dollar value, was heavy artillery. Deliveries of heavy artillery increased steadily from the beginning of 1942 until the peak was reached in the first quarter of 1945. Throughout the war there was no slacking in the production of heavy artillery, which includes all calibers from 4.5" to 240.mm.

CHART 3

TOTAL PROCUREMENT DELIVERIES DURING
THE WAR PERIOD—BY TECHNICAL SERVICE

The increase in deliveries of light and medium artillery was rapid from the beginning of 1942 until the peak of production during the winter of 1942-1943. Thereafter, deliveries were held at a high level through the summer of 1943, until shortages had been filled. Subsequently, production and deliveries were geared to requirements, which were met with uniformity and promptness. These trends are shown in chart 5. (Also see Appendix A, pages 75 and 76.)

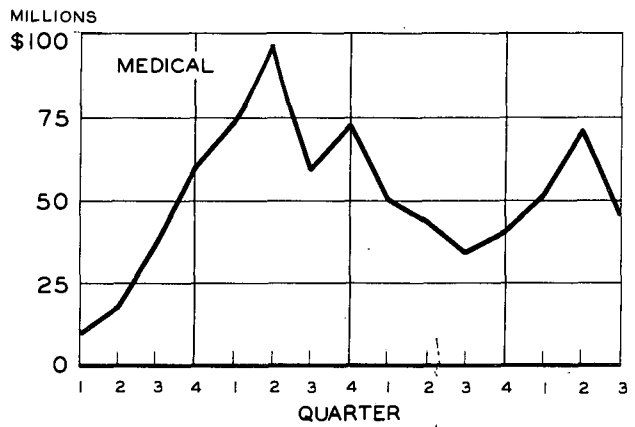

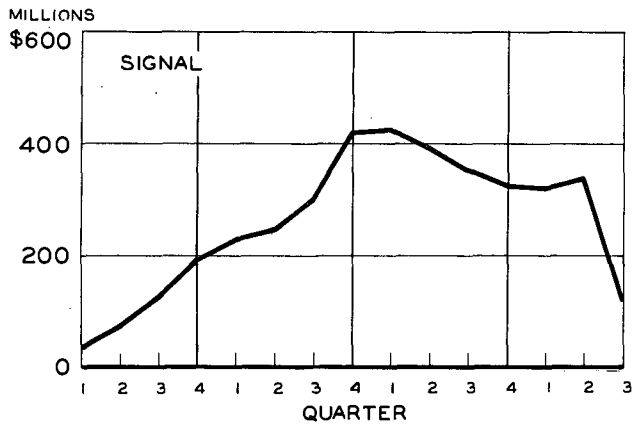

ARTILLERY AMMUNITION DELIVERIES

Trends in deliveries of artillery ammunition are not directly comparable with deliveries of artillery. At the beginning of the war, it was necessary to establish replacement factors for ammunition, based on estimated consumption rather than actual combat experience. As the war progressed, actual field operations provided a firmer basis for the establishment of replacement factors

PROCUREMENT

CHART 4

PROCUREMENT DELIVERY TRENDS-BY TECHNICAL SERVICE WAR PERIOD

PROCUREMENT

and the computation of ammunition requirements. However, new tactical developments, which called for more intense and continued artillery fire for some operations than had previously been employed, necessitated the continual modification of replacement factors and consequent adjustment of production and deliveries. Another factor affecting procurement was the development of many new types and calibers of artillery which dictated shifts in production of ammunition.

Chart 5 shows that the peak of deliveries of all types of artillery ammunition was reached during the winter of 1944-1945, after replacement factors had been well stabilized and gun types and calibers had been fairly well standardized. Deliveries of heavy artillery ammunition constituted about 18 percent of the total deliveries of all types of artillery ammunition. (Appendix A, page 75.)

TANKS

Tank production increased rapidly during the first year of the war, under impetus of meeting the objective of 45,000 tanks in 1942, pronounced by President Roosevelt at the beginning of the year. The objective was met in the combined production of tanks and tank-mounted self-propelled weapons. Most of the 1942 deliveries were of the M-3 type; subsequently the light tank demand was shifted to the M-5 type. Production of the M-4 medium type tank began to take hold in the third quarter of 1942 and reached peak production in the second quarter of 1943. The trends in the deliveries of M-4 tanks and of all tanks are shown in Chart 5. (See also Appendix A, page 76.)

SHOULDER WEAPONS

Production of shoulder weapons was slow in getting under way in the first year of the war, particularly because of the necessity for tooling up enough plants to produce the required quantity of the newly standardized M-1 (Garand). Subsequently, the standardization of the carbine for use by certain designated personnel required additional production facilities and tooling.

The peak of production and deliveries of all types of shoulder weapons was reached in the last quarter of 1943; of the total, 68.4 percent were carbines, and of the remainder 56.4 percent were Garands (M-1). Chart 5 shows quarterly deliveries throughout the war period. "Other" shoulder weapons include the M-1 (Garand), the 1903 (Springfield), the 1917 (modified Lee-Enfield), and the Browning Automatic Rifle. (See also Appendix A, page 75.)

CRAWLER TYPE TRACTORS

Among the items which were in critical supply throughout the entire period of the war were crawler type tractors. From a total of 684 delivered in the first quarter of 1942, deliveries increased steadily until the peak of 8,494 tractors delivered was reached in the fourth quarter of 1944. Tractors are grouped in classes according to draw-bar horsepower, as follows:

Class I	- 91 to 140 DBHP
Class II	- 61 to 90 DBHP
Class III	- 46 to 60 DBHP
Class IV	- 36 to 45 DBHP

Of the total of 69,165 crawler type tractors delivered during the war period, 14.4 percent were Class I tractors, 32.0 percent were Class II, 17.8 percent were Class III and 35.8 percent were Class IV. Tractors in Classes II and III were new items which first went into production in the first quarter of 1943, which may be noted in Chart 5. (See also Appendix A, page 78.)

GAS MASKS

Upon the entry of the United States into the war, the urgency of need for gas masks was immediately apparent in the rapid rise in deliveries from production, which reached the peak in the first quarter of 1943. Thereafter, production and deliveries were geared to requirements for replacement, as initial issue demands were being met promptly. Chart 5 indicates the large amount of deliveries during the year 1943; of the war total of more than 32.2 million masks, the 1943 deliveries constituted 48.3 percent.

SUBSISTENCE

The total of more than \$11.4 billion of food supplies and related items includes only Zone of Interior purchases for shipment overseas and use at posts, camps, and stations. It does not include purchases abroad by theaters and bases for overseas consumption. Included, however, are approximately 90 percent of the U. S. Navy requirements which were purchased by the Army Quartermaster. As shown in Chart 5, subsistence deliveries reached a high level in the fourth quarter of 1944, which level was maintained throughout the balance of the war. (See Appendix A, page 80.)

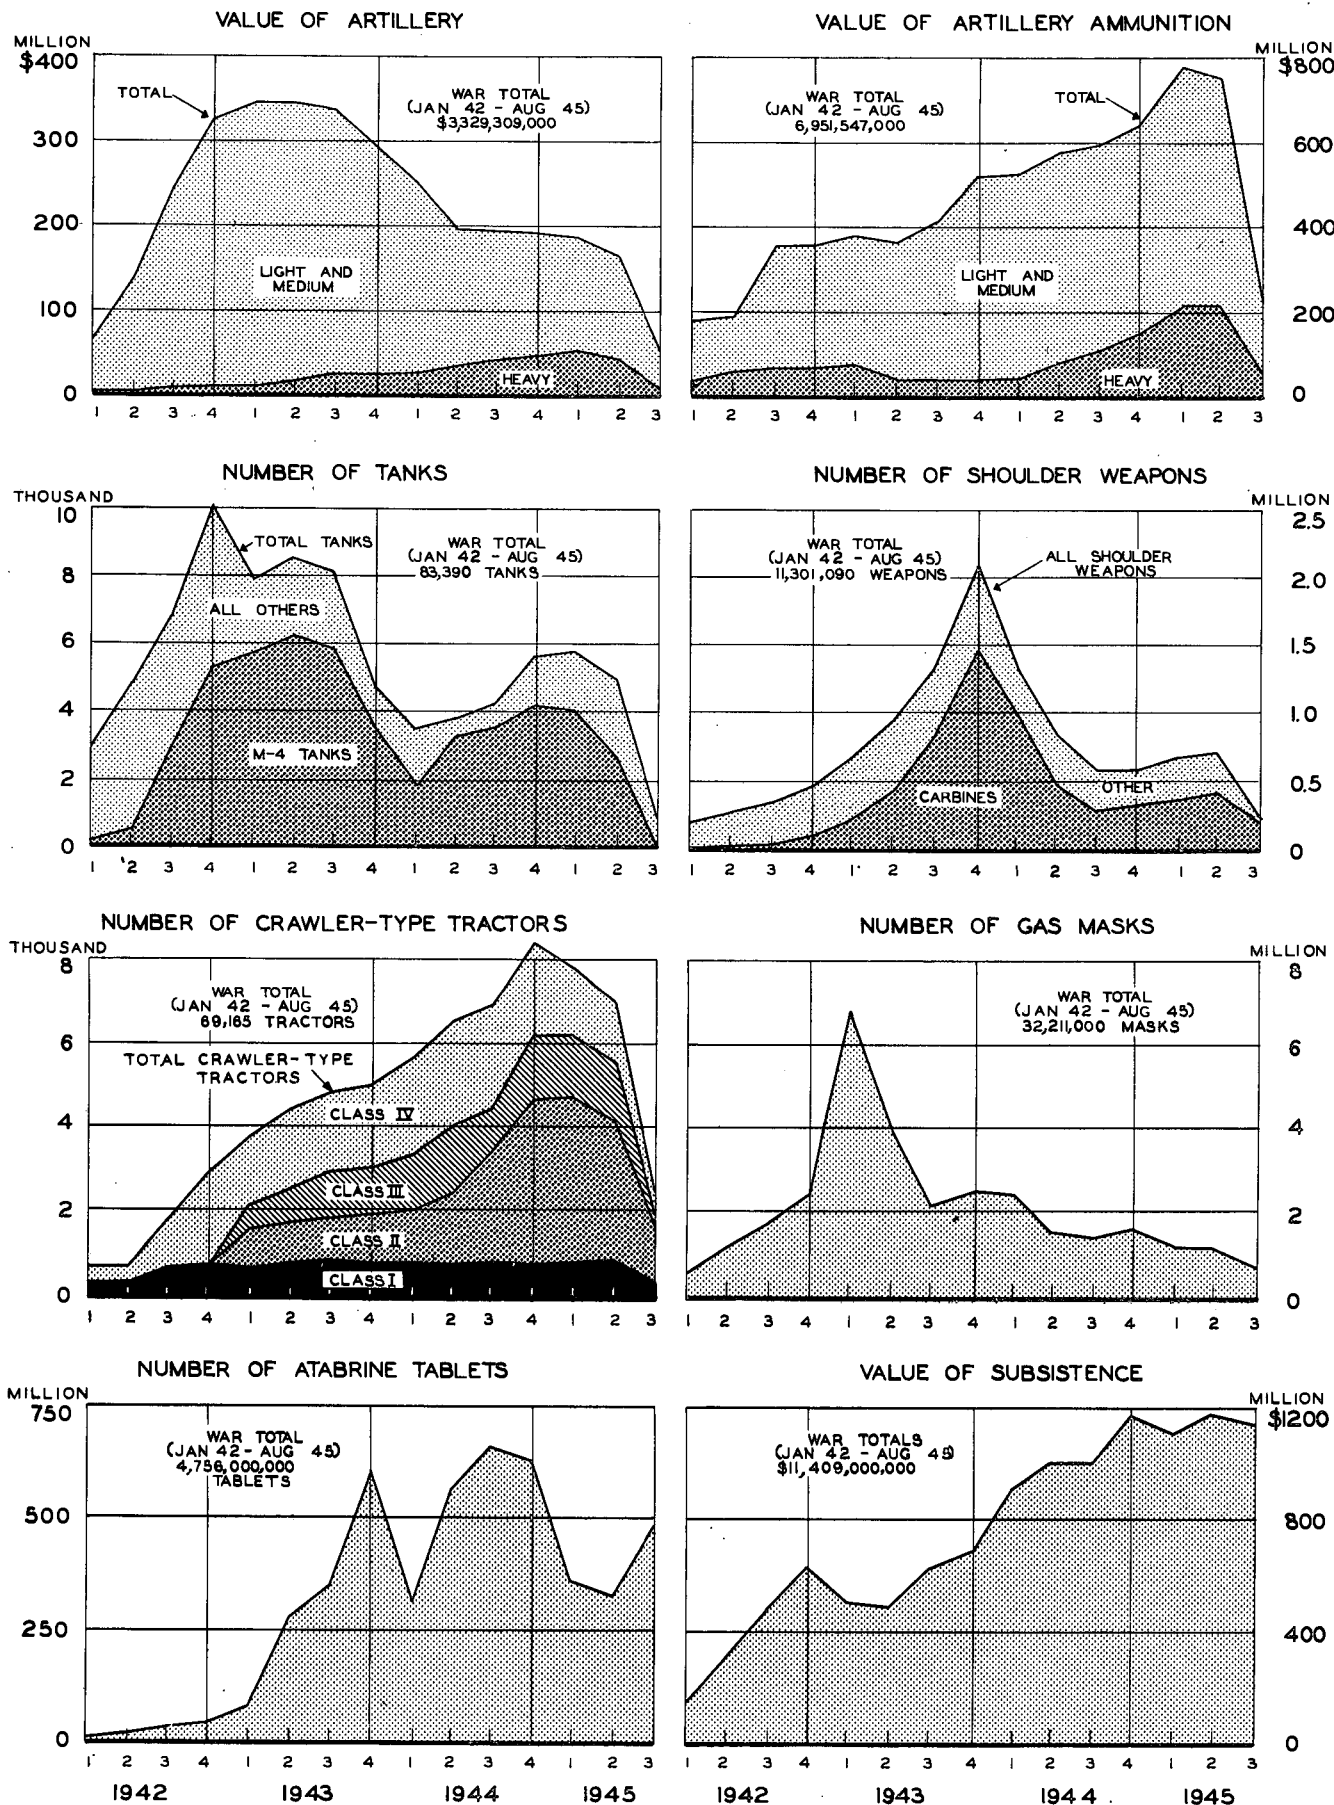

ATABRINE

Since the major source of supply of quinine was cut off at the beginning of the war with Japan, due to the occupation of the Netherlands East Indies by the Japanese, it was necessary to provide for the production of great quantities of atabrine. Production and deliveries kept pace with requirements,

PROCUREMENT

CHART 5

TRENDS IN DELIVERIES OF SELECTED PROCUREMENT ITEMS—QUARTERLY DURING THE WAR PERIOD

PROCUREMENT

which were mostly for our forces in the Pacific, where malarial defense was essential. Chart 5 shows how production was pushed to a high point in the last quarter of 1943 and again reached the peak in the last half of 1944.

ACCURACY OF FORECASTING

The need for accurate forecasting of deliveries of ASF procured materiel has been of great importance throughout the war, so that distribution could be planned in advance. This planning was necessary not only to meet operational and replacement requirements in theaters of operations, but also to provide for the alerting and training of units, in the Zone of Interior. Early in 1943 it was realized that the monthly delivery forecasts made as of the first of the month were generally poor and a campaign was inaugurated among the technical services to improve this forecasting. The results are indicated in Chart 6, which shows how the percent of forecasts made within 10 percent of actual deliveries increased from month to month during 1943.

CHANGES IN SCHEDULES RESULTING FROM V-E AND V-J DAYS

Procurement schedules were at the highest level of the war period during the early months of 1945. As of 31 March 1945, schedules for the calendar year 1945 called for a

CHART 6

* First of month

monthly average delivery rate nearly 20 percent above the monthly average of 1944 deliveries. The 31 March schedules for 1946 provided for a decline from the 1945 rate; nevertheless, the total amount scheduled for 1946 was about 5 percent above 1944 deliveries.

CHART 7

Note:

1. Schedule as of 31 March 1945 adjusted for price change. Percent reduction in 1944 deliveries between 31 March and 31 July was applied to 31 March schedules.
2. Actual deliveries through August 1945 are as reported 31 August 1945. The 30 September report changed these figures slightly.

PROCUREMENT

The initial adjustments in procurement from a two-front war to a one-front war basis were made immediately following the surrender of Germany. During the weeks that followed, the adjustments to a one-front war basis were completed in a continuous process according to plans made long before V-E Day. By the end of July 1945 the schedules for the last five months of 1945 had been reduced to approximately 65 percent of the pre-V-E Day schedules. For the calendar year 1946, procurement schedules were reduced by approximately 35 percent between 31 March and 31 July. Following the sudden surrender of Japan, procurement schedules of all ASF items were re-

duced to zero with the exception of those items for which there was a necessity for continuing procurement. Between 31 July and 31 August procurement schedules for the last four months of 1945 were reduced from \$5.7 billion to about \$1.1 billion. This represented a cut of \$4.6 billion (about 80 percent) for the four-month period. For the year 1946, the schedules were reduced from \$14.8 billion to \$1.7 billion. This was a reduction of \$13.1 billion (about 88 percent).

Chart 7 shows how procurement schedules were changed as a result of V-E Day and V-J Day.

MAINTENANCE

Maintenance activities considered here refer only to fourth and fifth echelon maintenance activities.* The rebuilding and reconditioning of materiel to restore it to serviceable condition for using organizations or for return to stock, of course relieved the necessity for a corresponding amount of new procurement. During the periods for which summary data are available, the nine numbered service commands and the Military District of Washington made serviceable an average of \$298,250,000 worth of materiel per month, and the seven technical services made serviceable a monthly average of \$93,567,000 of materiel. The value of such materiel returned to serviceable condition had a total value equivalent to 27 percent of all procurement (excluding subsistence) for the same period.

TECHNICAL SERVICES

Estimated dollar value of unserviceable materiel returned to service (to using organizations and to stock) by fifth echelon shops and commercial shops under contract increased from \$42,170,000 for January 1944 (first report month) to \$134,501,000 for January 1945, and then decreased irregularly to \$90,744,000 in August 1945. The total value processed for this period was \$1,871,348,000 and it averaged \$93,567,000 per month. The total

work load (on hand 1 January 1944 plus all receipts through August 1945) of unserviceable materiel on hand for processing at technical service fifth-echelon maintenance installations during the 20-month period was valued at more than \$1,976,278,000. Chart 8 shows the volume of fifth-echelon maintenance operations from January 1944 through August 1945.

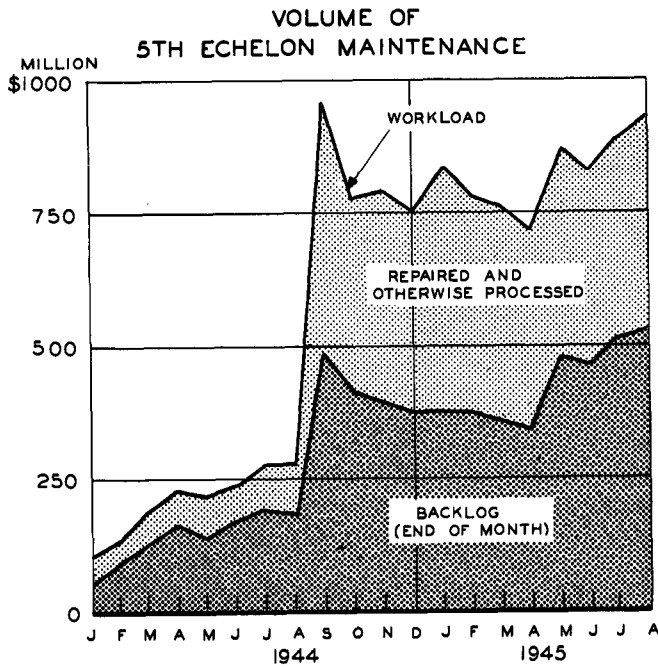

The composition and proportions processed (by repair, salvaging, or cancellation of repair orders) of the work load as distributed among the seven technical services is shown in Chart 9. The total work load for the period from January 1944 through August 1945 was distributed among the technical services in the following proportions:

Ordnance Department	60.7%
Quartermaster Corps	17.0
Signal Corps	15.1
Corps of Engineers	2.9
Chemical Warfare	3.1
Transportation Corps	1.0
Medical Department	0.2

The volume of employment reported for the period from September 1944 through July 1945 indicates that ASF fifth-echelon shops (excluding commercial establishments under contract) employed approximately 24,500 persons per month. Of these 5.5 percent were military personnel, 82.6 percent were civilians, and 11.9 percent were prisoners of war.

Detailed data on technical service shops are shown in Appendix B, page 82.

CHART 8

*Fifth-echelon shops under technical service operation had the primary responsibility of rebuilding unserviceable equipment for return to stock; fourth-echelon shops were occupied primarily with the replacement of parts and assemblies.

CHART 9

DISTRIBUTION OF TECHNICAL SERVICE MAINTENANCE WORKLOAD JAN 44 - AUG 45

MAINTENANCE

CHART 10

SERVICE COMMANDS

Fourth-echelon maintenance (replacing unserviceable parts and assemblies) performed primarily by service command fourth-echelon and combined shops operated on a work load averaging \$332,000,000* per month for the period from September 1944 through August 1945 (no dollar value estimates are available before September 1944). The composition and disposition of the total work load aggregating more than \$3,579,000,000 for the period from September 1944 through July 1945 is given by service command in Chart 10. The total work load for the period was distributed among the service commands (and the Military District of Washington) in the following proportions:

First Service Command.	5.3%
Second Service Command.	14.9
Third Service Command.	13.5
Fourth Service Command.	15.6
Fifth Service Command.	7.0
Sixth Service Command.	3.5
Seventh Service Command.	5.6
Eighth Service Command.	20.8
Ninth Service Command.	13.5
Mil. District of Wash.	0.3

Chart 11 shows by service command the total value of work load for the period from September 1944 through July 1945, together with the total value processed during that period.

CHART 11

**DISTRIBUTION OF SERVICE COMMAND
MAINTENANCE WORKLOAD SEP 44 - JUL 45**

ASF service command shops employed an average of 48,200 employees during the 20-month period from January 1944 through August 1945. Of these 11.2 percent were military personnel, 63.7 percent were civilians, and 25.1 percent were prisoners of war.

Detailed data on service command shops are shown in Appendix B, page 83.

* See footnote on preceding page.

CONSTRUCTION AND REAL ESTATE

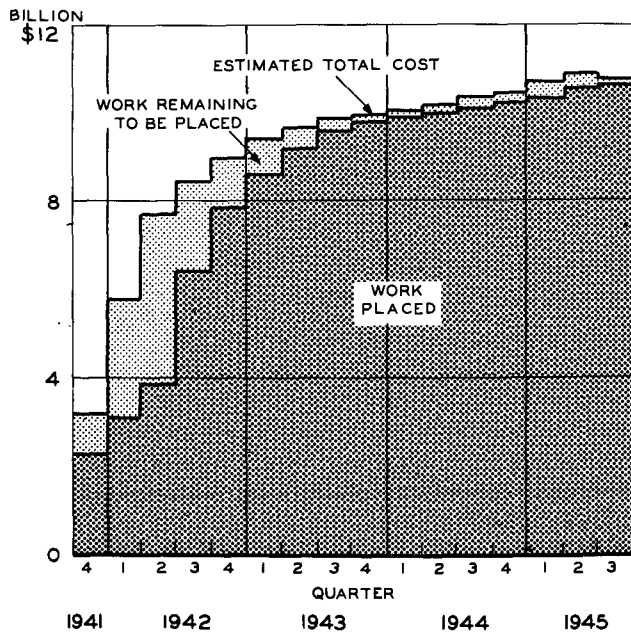

CONSTRUCTION UNDER CORPS OF ENGINEERS

Work Placed Continental U. S.

Prior to the outbreak of the war on 7 December 1941, a construction program had been initiated by the War Department to provide housing and training facilities for the expanding Army. This program was started in July 1940 and was under the supervision of the construction division of the Quartermaster Corps; it was transferred to the Corps of Engineers in December 1941 and carried out under Engineer supervision thereafter. As may be seen in Chart 12, by 31 December 1941 this construction program amounted to about \$3,206,000,000 of which 73.9 percent or \$2,368,000,000 had been put in place.

CHART 12

WAR CONSTRUCTION IN CONTINENTAL U. S.
CUMULATIVE FROM 1 JULY 1940

The total approved cost of the construction program rose from \$3,206,000,000 on 31 December 1941 to almost \$9,000,000,000 by the end of 1942 and work in place rose to almost \$8,000,000,000 by the end of that year. From the end of 1942 to 31 August 1945 the total approved cost of the construction program increased further, from \$9,000,000,000 to about \$10,800,000,000 and work placed increased from \$8,000,000,000 to \$10,700,000,000. The following table presents a breakdown of the amount of work placed on the war construction program from 1 July 1940 through 31 August 1945 by type of installation. These data on a monthly basis for the period from December 1941 through August 1945 are shown in Appendix C, page 84.

WORK PLACED ON WAR CONSTRUCTION PROGRAM 1 July 1940 - 31 August 1945

Type of Installation	Amount (Thousands)	Percent
TOTAL	\$10,670,045	100.0
INDUSTRIAL	3,201,364	30.0
COMMAND	7,468,681	70.0
Air	3,152,025	29.5
Ground	2,822,637	26.5
Storage & Shipping .	1,040,827	9.8
Miscellaneous	453,192	4.2

As may be seen in this table, construction of command installations represented about 70.0 percent of the total program while the remaining 30.0 percent or \$3,200,000,000 represented construction costs of industrial installations owned by the War Department. This latter figure excludes the cost of production machinery and equipment installed in these War Department owned facilities, which amounted to around \$1,800,000,000. Also excluded from these figures are \$3,000,000,000 expended for construction of plants and equipment costs which were sponsored by the War Department but constructed by the Defense Plant Corporation, a subsidiary of the RFC.

The volume of construction put in place monthly during 1941 averaged \$172,475,000 and during 1942 this average increased to about \$463,823,000 a month. The peak month for the volume of work placed on the construction program was attained in July 1942 (Chart 13), with a record amount of \$720,364,000 placed in that month. In subsequent months the volume of work placed monthly declined rapidly, dropping to \$53,955,000 in December 1943. In 1944 the monthly amount of work placed averaged about \$36,737,000. In 1945 the monthly volume of construction placed increased from \$32,836,000 in January 1945 to \$62,480,000 in July 1945 and then dropped off to \$47,852,000 in August with the end of the war. Chart 14 shows by calendar year the volume of construction placed for industrial and command installations and Chart 15 gives a breakdown of the command construction into air installations (those constructed for the AAF) and ground, storage and shipping, and miscellaneous installations, which cover installations of the AGF and ASF.

During the construction program about 23,202 jobs were completed and on 31 August 851 jobs were still unfinished. Data on the number and value of jobs completed monthly from December 1941 through August 1945 may be found in Appendix C, page 85. These jobs

CONSTRUCTION AND REAL ESTATE

CHART 13

VALUE OF WORK PLACED ON WAR CONSTRUCTION PROGRAM CONTINENTAL U. S.

underway on 31 August 1945 were estimated to cost \$232,174,000 but work remaining to be placed on them was estimated at \$113,239,000.

A distribution of the work remaining to be placed, by type of installation, is shown in the table at the top of the first column of the following page, together with a summary of the total estimated cost of the construction program and the percent of work in place at the end of August. During August 1945, following V-J Day, cancellations and curtailments of jobs underway amounted to about \$110,000,000.

CHART 14

Construction Employment

Employment on the War construction program in the continental United States on 31 December 1941 numbered 465,123 persons, exclusive of military personnel connected with these jobs. By 31 July 1942 the number of persons employed on the construction program had risen to 1,013,964. This was the peak month of employment on the construction program. By the end of 1942, employment had dropped to 650,756 persons and by December 1943 it was less than 100,000. During 1944 construction employment averaged 62,024 persons per month. In January 1945 construction employment numbered 64,920 and rose to 96,004 in July and then dropped to 66,131 persons on 31 August 1945. Employment on this program is shown by months for the period for December 1941 through August 1945 in Appendix C, page 85.

CONSTRUCTION OUTSIDE CONTINENTAL UNITED STATES

In addition to the construction program conducted in the continental United States under the Corps of Engineers, certain construction jobs performed in Alaska, Canada, Central America, Hawaii, and the Caribbean and North Atlantic areas were operated under the supervision of the Corps of Engineers. The total approved cost of these jobs amounted to \$774,320,000 as of 31 August 1945 and work in place came to \$762,322,000. In addition to this, construction performed in the various theaters and departments under jurisdiction of overseas commands was estimated to have cost in excess of a billion dollars.

As may be seen in Chart 16, the bulk of the construction accomplished on these projects outside the United States under the jurisdiction of the Corps of Engineers was performed in 1943. The monthly figures may be found in Appendix C, page 85. In November 1943 the volume of work placed reached a high of about \$75,185,000 for the month, as work was being pushed for completion of the Alcan

CHART 16

VALUE OF WORK PLACED ON WAR CONSTRUCTION
OUTSIDE CONTINENTAL U.S.

Highway and the Canol projects in Alaska and Canada.

REAL ESTATE - FEE ACQUISITION

In the period from 1 July 1940 through 31 August 1945 the War Department acquired fee title to about 39,410,000 acres of land. As may be seen in the table below, about 34,561,000 acres of the land acquired was within the continental United States and 4,849,000 acres were in territories and possessions of the United States, such as Alaska, Hawaii, Panama Canal Zone, Puerto Rico, and the Virgin Islands.

REAL ESTATE FEE ACQUISITION
1 July 1940 - 31 August 1945

(Thousands of Acres)

Type of Acquisition	Total	Cont. U. S.	Out-side Cont. U. S.
TOTAL	39,410	34,561	4,849
Purchase or Condemnation	6,203	6,158	45
Lands	33,165	28,361	4,804
Donation	42	42	*

* Less than 500 acres.

Of the 39,410,000 acres acquired by the War Department, 33,165,000 acres represented public domain or other government-owned lands which were acquired by transfer to the War

CONSTRUCTION AND REAL ESTATE

Department and 42,000 acres represented land donated by states, counties, cities, and other political subdivisions. The remaining 6,203,000 acres represented land acquired from private owners by purchase or through condemnation proceedings.

CHART 17

The acreage acquired by purchase and condemnation in the continental United States represented about 77,600 tracts of land which approximates the number of land owners with whom negotiations for purchase of this land were carried on. Chart 17 shows the cumulative status of the fee acquisition program in terms of tracts authorized for acquisition and those on which final disbursement had been made for the period 30 June 1942 through 31 August 1945. Of the 77,600 tracts authorized for acquisition at the end of August 1945, 71,800 had been completed in full; that is, final disbursement had been made to landowners. Funds authorized for acquisition of real estate amounted to about \$693,444,000 as of 31 August 1945 and final disbursement had been completed on about \$342,790,000. Cumulative data on the number of tracts and funds are shown in Appendix C, page 86.

REAL ESTATE LEASING PROGRAM

Real estate leases acquired by the War Department during the war numbered more than 33,000. However, as may be seen in Chart 18, the number of active leases as of the end of any given month ranged from 9,310 on 30 April

CHART 18

1943 to 19,883 on 31 March 1944. Data are not available prior to April 1943.

Annual rentals for active leases of the War Department from 30 April 1943 through 31 August 1945 remained relatively stable, as is indicated in Chart 19. They ranged from a peak of \$57,838,000 on 31 August 1943 to a low of \$48,653,000 in July 1945. Data on the number and annual rental value of active leases may be found in Appendix C, pages 87 and 88.

CHART 19

CONSTRUCTION AND REAL ESTATE

As may be seen in Chart 20 and the following table, on 31 August 1945 the bulk of the total number of active leases represented leases for land; in terms of annual rentals, storage space accounted for the largest part.

NUMBER AND ANNUAL RENTAL OF ACTIVE WD LEASES
As of 31 August 1945

Command & Type of Space	Number	Annual Rental
TOTAL	16,560	\$48,742,958
Storage	1,927	20,679,136

* Includes Defense Commands, Etc.

CHART 20

ANNUAL RENTAL OF ACTIVE WD LEASES
AS OF 31 AUGUST 1945

REAL ESTATE DISPOSAL

From 1 July 1940 through 31 August 1945 the War Department had determined real estate owned by the War Department estimated to have cost about \$401,444,000 to be surplus to its needs. As may be seen in the accompanying table, of the total amount of surplus WD real estate on 31 August, custody for \$150,487,000 had been removed from the War Department. For the remaining surplus real estate, which amounted to \$250,957,000, the War Department had certified property estimated at about \$141,248,000 to the Surplus Property Administration but custody had not yet been assumed by the disposal agencies. Surplus real estate estimated at \$109,709,000 required further disposition action by the War Department. Disposition action by the War Department is accomplished by certifying property to the Surplus Property Administration or by cancellation of leases, retransferring property to government agencies from which originally acquired, and permanent transfer to other government agencies. Prior to creation of the Surplus Property Administration some properties were sold directly by the War Department.

SURPLUS WAR DEPARTMENT OWNED REAL ESTATE
As of 31 August 1945

Status	Total	Command	Industrial
TOTAL	\$401,444,000	\$288,850,000	\$112,594,000
CUSTODY REMAINS WITH WAR DEPARTMENT	250,957,000	166,042,000	84,915,000
Certified to SPA*	141,248,000	68,085,000	73,163,000
Awaiting Action by War Department	109,709,000	97,957,000	11,752,000
CUSTODY REMOVED FROM WAR DEPARTMENT	150,487,000	122,808,000	27,679,000
Sold	15,569,000	6,646,000	8,923,000
Retransferred to Government Agency	5,986,000	5,986,000	0
Permanent Transfer to Government Agency	75,702,000	63,588,000	12,114,000
Lease Cancelled	52,092,000	46,578,000	5,514,000
Custody Assumed by SPA	1,138,000	10,000	1,128,000

* Custody not assumed by Surplus Property Administration.

CONSTRUCTION AND REAL ESTATE

REPAIRS AND UTILITIES

In July 1943, a cost accounting system was initiated to record the costs of repairs and utilities operations at all Army installations except government-owned, agent-operated installations.

During the period from 1 July 1943 through 31 August 1945, costs for repairs and utilities operations amounted to about \$1,065,217,000. As indicated in the following table, costs for fuel accounted for \$118,285,000 of this total and costs for alterations and minor new construction amounted to \$134,815,000. The remaining \$812,117,000 represented regular maintenance repairs and operations costs including such things as upkeep of buildings, grounds and roads, fire protection, purchase of utilities, operation and upkeep of utilities systems, and other items. Appendix C, page 89, presents monthly costs on operations of the repairs and utilities program for the period from July 1943 through August 1945.

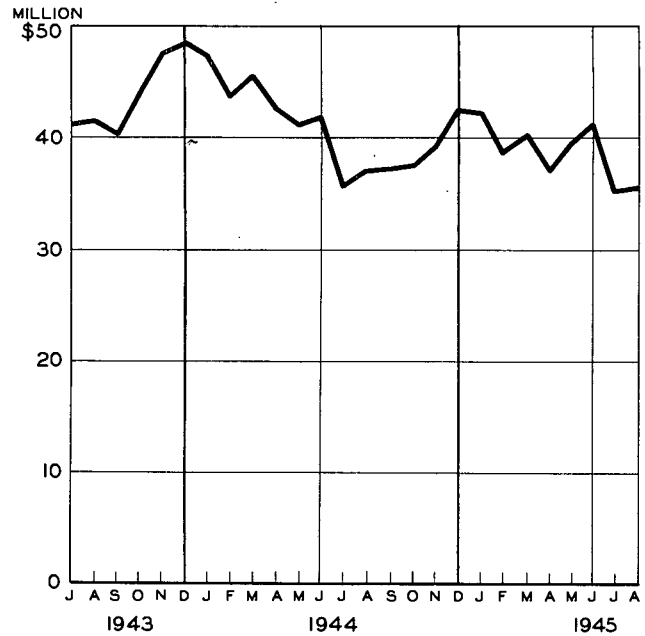

COST OF REPAIRS AND UTILITIES
1 July 1943 - 31 August 1945

(In Thousands)				
Service Command	Total	Maint. Repairs & Op.	Fuel	Alt. & Minor New Constr.
TOTAL	\$1,065,217	\$812,117	\$118,285	\$134,815
I . .	40,299	28,484	7,441	4,374
II . .	95,799	72,655	11,810	11,334
III . .	73,285	54,817	10,289	8,179
IV . .	226,363	176,531	22,344	27,488

MDW . .	17,560	13,226	2,501	1,833

Chart 21 presents the monthly costs for repairs and utilities and indicates that a fairly general decrease was accomplished during the period from 1 July 1943 through 31 August 1945.

CHART 21

COST OF REPAIRS AND UTILITIES

UTILIZATION OF COMMAND INSTALLATIONS

A monthly series of data on utilization of the housing capacity at posts, camps, and stations in the United States was initiated in March 1944. By then more than 40 percent of the Army had been moved overseas and housing capacity was available in excess of requirements. A report on the status and utilization of capacity was basic to the consolidations and dispositions designed to improve the effective use of these installations. Some were retained in an inactive status for future use while others were determined surplus to the entire War Department and were disposed of. Monthly data showing the status and utilization of housing capacity of major command installations of the AGF and ASF may be found in Appendix C, page 90, for the period from March 1944 through August 1945. The decrease in total capacity figures noted in that table resulted from disposing of surplus housing and also to some extent from changes in capacity figures because of different bases of measures and the conversion of housing to other uses.

PROPERTY DISPOSITION

EXCESS AND SURPLUS PROPERTY

During the war, excess stocks of certain equipment and supply were accumulated as a result of changing needs for items and the turn of developments in overseas operations. Upon determination of stocks as excess, efforts were made to redistribute the property within the War Department or to transfer it to other government agencies or war contractors. In the event that no need was found for the excess stocks, they were then declared surplus to the needs of the War Department and were reported to the disposal agencies designated by the Surplus Property Administration for disposal.

Disposition of excess and surplus property of the War Department during the period from 1 June 1944 through 31 August 1945 is shown by service in the adjoining table. Of the total dispositions (\$4,572,245,000) effected during this period, surplus property reported to disposal agencies accounted for \$3,955,454,000. Dispositions of ASF excess and surplus property came to \$1,549,915,000 of which \$1,087,270,000 represented surpluses reported to disposal agencies.

Monthly data on the amounts of excess property redistributed and transferred (including transfers to Navy, sales to war contractors, and other miscellaneous disposals) and of surpluses reported to disposal agencies are shown in Appendix D, pages 91 to 93.

CHART 23

DISPOSITION OF EXCESS AND SURPLUS PROPERTY
ARMY AIR FORCES

Charts 22, 23, and 24 show the monthly records for disposition of excess and surplus property. In Chart 24 it will be noted that dispositions of ASF excess and surplus property in August 1945 were more than four times as large as in any previous month. ASF dispositions during August consisted of redistributions of property within the War Department amounting to \$14,714,000; transfers of excesses to other government agencies and war contractors amounting to \$21,480,000; and surpluses reported to disposal agencies amounting to \$510,848,000.

PROPERTY DISPOSITION

CHART 24

DISPOSITION OF EXCESS AND SURPLUS PROPERTY
ARMY SERVICE FORCES

During the period from 1 June 1944 through 31 August 1945 excess and surplus property estimated to have cost \$5,224,067,000 was made available for disposition. As may be seen in the following table, disposition had been effected for all but \$651,822,000 as of 31 August 1945. A monthly record of the backlog of excess and surplus property awaiting disposition action by the War Department may be found in Appendix D, page 94.

EXCESS AND SURPLUS PROPERTY
1 June 1944 - 31 August 1945

(In Thousands)

Service	Made Available	Disposi- tion	Awaiting Disposi- tion

TC	46,904	33,570	13,334
Sv. Com. .	88,309	83,655	4,654

In addition to the excess and surplus property awaiting disposition action by the War Department on 31 August referred to above, surplus property amounting to \$1,972,339,000 which had been reported to disposal agencies was still in the Army's hands awaiting delivery orders from the disposal agencies. ASF property accounted for \$790,977,000 of this total amount awaiting disposal agency action on 31 August. Chart 25 shows for the ASF the total amount of property that had been reported to disposal agencies, the amounts that had been transferred to or on order of the disposal agencies, and the amount awaiting action by disposal agencies. A record of the backlog of surplus WD property which was awaiting action by disposal agencies is shown by month in Appendix D, page 94.

Transportation	535	442	93

CONTRACT TERMINATION INVENTORIES

Upon termination of war contracts, the War Department is charged with responsibility for clearing inventories from contractors' plants within 60 days after receipt of clearance requests. From 1 June 1944 through 31 August 1945 the War Department received clearance requests for about \$710,419,000 of contractor-owned termination inventories. As may be seen in the following table, all but \$131,017,000 of the total had been cleared by 31 August 1945. The major portion of the dispositions effected represented property retained by the contractors. Data on the value of inventories received and cleared, and on amounts awaiting clearance are presented in Appendix D, pages 95 and 96.

CONTRACT TERMINATION INVENTORIES
1 June 1944 - 31 August 1945

Item	(In Thousands)		
	War Dept	AAF	ASF
RECEIPTS	\$710,419	\$284,727	\$425,692
DISPOSITIONS	579,402	236,052	343,350
Retained or Sold by Con.	353,197	157,988	195,209
Serviceable	128,429	27,904	100,525
Scrap	224,768	130,084	94,684
Title Taken by Govt	226,205	78,064	148,141
ON HAND-31 AUG	131,017	48,675	82,342

Of the total number of requests completed by the War Department, 89.5 percent were completed within the 60-day period allowed under the Contract Settlement Act. For the AAF this percentage was 88.6 percent and for the ASF 90.9 percent. Charts 26 and 27 show the total number of clearances completed monthly together with the number requiring more than 60 days to complete. Data showing the number of requests received and completed monthly are shown in Appendix D, pages 96 and 97.

CHART 28

RECEIPTS FROM SALVAGE SALES

PROPERTY DISPOSITION

SALVAGE SALES

During the period from 1 January 1944 through 31 August 1945, receipts from sales of War Department scrap property amounted to \$160,625,000. As indicated in Chart 28, the bulk of these receipts represented sales of

scrap by the ASF. Total receipts of the ASF came to \$140,448,000 of which \$107,808,000 represented receipts from sales of scrap by the technical services and \$32,640,000 sales by the service commands. Monthly data on receipts from sales of scrap may be found in Appendix D, page 97.

DEPOT OPERATIONS

The work of the systems of technical service depots required to supply global operations during World War II is here treated as two fields, depot supply operations and depot storage operations.

The term Depot Supply Operations is used to cover the broad field of distribution and stock control involving the requisitioning of materiel by the using unit, processing and shipment by the responsible technical service, and maintenance of adequate stock control. At the depot level the depot stock control division is responsible for these operations which may be described as the "paper work" incidental to effective supply. Inasmuch as the duties and responsibilities of depot stock control divisions consisted principally of processing documents, they were measured in terms of a documentary unit. The unit of measure selected for this purpose was the "requisition line item", a single entry on a requisition, representing a request from a using unit (post, camp, station, or overseas theater) for a given quantity of a single stock item to be shipped at a specified time. By following this unit through the processing steps in the depot (or technical service depot system) a measure was obtained of the efficiency and dispatch with which demands were met. Completion of requisition processing reflected the physical movement of materiel to troops in the United States and overseas.

The functions of receiving, shipping, and warehousing were physically performed at the depot level by depot storage divisions. The efficiency with which these activities were conducted was measured in terms of tonnage handled in and out of the depot and utilization of storage space and personnel.

DEPOTS OPERATED BY TECHNICAL SERVICES

Date	Number of Depots
31 December 1941	55
31 December 1942	126
31 December 1943	127
31 December 1944	127
31 August 1945	127

In the following pages are presented the more significant data relating to these two broad categories of supply activity.

DEPOT SUPPLY OPERATIONS

The total volume of requisition line items available for processing (including those on hand at the beginning and those received during the period) averaged 6,400,000

per month for the period for which data were collected (October 1943 through August 1945). It must be borne in mind in considering these and other data that the requisition line item is not a uniform unit of measure. A line item may call for shipment of any stock item in any given quantity; for example the same requisition might contain line items ranging in relative weight from one screwdriver to several Diesel engines. The unit cannot be considered uniform even as to the amount of paper work required to process, because in the transition from the requisition to the shipping document many line items can be handled in their entirety whereas a line item calling for 500 carloads of flour, for example, would require as many shipping documents. The use of the unit was justifiable, however, under the pressure of wartime conditions, since it provided a more or less rough measure of supply efficiency and was relatively simple to tabulate.

CHART 29

NUMBER OF LINE ITEMS ON HAND FOR PROCESSING
BY TECHNICAL SERVICE SUPPLY SYSTEMS

* Prior data not available

In Chart 29 the absolute numbers of requisition line items available for processing in technical service depots are plotted by months for the period for which data are available. (See also pages 99-105 of Appendix E for data by technical service.) These data include some duplication since line items extracted by one depot appear in the counts both for that depot and for the one to which they are extracted.) The number of line items for shipment to overseas theaters is shown separately. Again, these figures are not an indication of the relative

DEPOT OPERATIONS

weight of overseas supply. Overseas requisitions were generally consolidated at theater headquarters and line items thereon, representing the needs of an entire theater, called for consistently greater quantities than did line items on Zone-of-Interior requisitions representing the demands of a single post, camp, or station.

Global offensive operations were contingent on speedy and efficient supply. Prompt compliance with theater requisitions was a primary objective of all technical service supply systems. In 1944, with the publication of Technical Manual M-411, "Procedures for Supply of Overseas Theaters," detailed and standardized regulations were established for processing overseas requisitions. Later, similar "Procedures for Processing Domestic Requisitions" were established with the publication of Technical Manual M-414. In August 1944, arrangements were made to obtain a breakdown of data between overseas and domestic requisition line items.

One of the measures used to indicate the efficiency of the supply system was the spot availability of materiel to meet the demands represented by requisition line items. As shown by Chart 30, about 15 percent of all line items were usually not immediately available for shipment; for overseas line items this ratio was a little higher. Immediate availability meant that the item could be shipped at once from the depot which initially received the requisition line item. The materiel might be and often was available in another depot, but "extracting" the item from the initial depot to another occasioned some delay and for the purpose of checking supply

CHART 30

LINE ITEMS NOT IMMEDIATELY AVAILABLE
AS PERCENT OF THOSE PROCESSED
BY STOCK CONTROL DIVISIONS

CHART 31

WAREHOUSE REFUSALS AS PERCENT OF
TOTAL LINE ITEMS ORDERED FOR SHIPMENT

effectiveness such items were considered as not immediately available. The number of line items not available within the entire technical service depot system was indicated by the number of line items placed on back-order. (See page 98).

In processing line items through the depot, the Stock Control Division determined availability from stock records and ordered the line item for shipment by placing the line item on the order copy of the War Department shipping document. The order copy of the War Department shipping document was then transmitted to the Storage Division for picking, packaging, marking, and otherwise preparing for shipment. At this point, if stock was not physically available in the warehouse or could not be located by the Storage Division the result was a "warehouse refusal" and the line item was checked back to the Stock Control Division for reprocessing. At the same time an inventory of the stock item was made to reconcile stock records with the physical stock position.

Beginning with August 1944, warehouse refusals were tabulated by each depot and used as part of a concerted effort to keep stock records in agreement with physical inventories. The success of this effort is reflected in Chart 31 which shows warehouse refusals as a percent of the total number of line items offered for shipment each month. In August 1944, the first month for which these data were collected, almost 6 percent of all line items offered for shipment resulted in warehouse refusals. Each month thereafter there was improvement and by August 1945 only 1.2 percent of line items of-

DEPOT OPERATIONS

ferred for shipment were resulting in warehouse refusals.

According to depot supply procedures, line items were held on back order only in the event of national unavailability; i.e., the item was not available for shipment from any point in the entire supply system. Numerous exceptions to this procedure occurred for various reasons of convenience, but in general the number of line items on back order may be regarded as a statement of the number of requisition line items which could not be supplied as of any given date.

CHART 32

LINE ITEMS HELD ON BACK ORDER

The absolute number of line items on back order is shown in Chart 32 as of the end of each month from October 1943 through August 1945. These data are shown by technical service on Pages 99-105 of Appendix E. At the end of October 1943, the first month for which such data were compiled, more than 1,250,000 requisition line items were being held on back order by all technical service depots. This backlog was steadily reduced throughout the following months as supply overtook demand, and by 31 August 1945 only 273,000 requisition line items were being held on back order in the entire ASF depot system.

Shipping schedules established by ports of embarkation included a "limiting date" shown on port extract requisitions to depots, by which time line items were to be set up ready for shipment. This date provided a ready measure of the performance of depots in complying with established schedules.

CHART 33

LINE ITEMS OFFERED FOR SHIPMENT
AFTER EXPIRATION OF TIME LIMITS
AS PERCENT OF TOTAL OFFERED FOR SHIPMENT

Procedures for processing domestic requisitions did not provide a similar date, so for reporting purposes only arbitrary time limits were established for measuring depot performance.

In Chart 33 the number of line items offered for shipment after expiration of such time limits is shown as a percent of the total number offered for shipment during the month. These data are shown by technical service on pages 99-105 of Appendix E. It will be noted that the proportion of line items offered late had a definite tendency to increase from month to month. Certain factors causing late offerings were not within the control of the individual depot or the technical service concerned. For example, late offerings were often occasioned by late receipt of the requisition or extract. In August 1945 more than 19 percent of all requisition line items and 36.9 percent of all extracted line items arrived late at depots. Delayed transportation releases or Office of Defense Transportation permits were also beyond the control of the depot and were the deciding factor in a number of late offerings (41,075 or about 2 percent in August of 1945).

DEPOT STORAGE OPERATIONS

Number and Distribution of Depots

As of 31 August 1945, the technical services of the Army Service Forces were operating 127 depots. Of these, 11 were ASF (jointly occupied by two or more technical services) depots operated by the Quartermaster Corps and 10 were holding and reconsign-

DEPOT OPERATIONS

ment points operated by the Transportation Corps, most of which were also used for storage of Transportation supplies. The number of depots operated by each technical service is shown in the following table.

TOTAL	127
Ordnance	47
Quartermaster	28
Engineers	15
Transportation	11
Signal	8
Medical	7
Chemical Warfare	6
Adjutant General	5

These depots are strategically located throughout the United States, with the greatest concentrations backing up the ports or located near the most important manufacturing districts. They are found in 30 of the 48 states. The greatest concentration was in California (18 depots), followed in order by New York (11 depots), Ohio (10 depots), and Pennsylvania (7 depots). The states of Massachusetts, New Jersey, Illinois and Washington had 6 depots each.

Storage Space at Depots

Storage space is of two distinct types, covered and open. The warehouse and shed (covered) space is presented in Chart 34 and Appendix E, page 106. By the summer of 1942, construction of this type of space had, for all practical purposes, been completed. Except for a slight recession during the summer of 1944, the trend in occupancy was constant-

CHART 34

WAREHOUSE AND SHED STORAGE SPACE
AT DEPOTS - (END OF MONTH)

CHART 35

OPEN STORAGE SPACE
AT DEPOTS

ly upward from the beginning of the war. By V-J Day, covered space for general supplies was 75 percent occupied; this approaches the practical working capacity of 80 to 85 percent.

The critical type of storage area is always the covered space. Open hardstanding areas can be quickly and cheaply constructed, and, as shown in Chart 35, large unimproved areas are used for the storage of supplies. Occupancy of open areas increased throughout the war, but new construction kept well ahead of the demand. On 31 August, open hardstanding areas were 54 percent occupied. (Appendix E, page 107). There was an additional 26,000,000 square feet of unimproved open area occupied. (Chart 35).

On 31 August, 6 percent of the goods in covered areas and 8 percent of those in open areas were nonissuable to the Army. For the most part these were surpluses.

Igloos and magazines for the storage of high explosives reached a capacity of about 30,000,000 square feet by mid-1943, and the capacity has increased very slightly since that date. With the end of hostilities in Europe, ammunition which normally by-passed the depots, going direct to ports, was diverted into depots, and large quantities already shipped were returned to the depots. This required the preparation of emergency open storage sites for ammunition. In the four-month period from 30 April to 31 August 1945, the amount of ammunition in storage more than doubled. (Charts 36 and page 107 of Appendix E.)

DEPOT OPERATIONS

CHART 36

On 31 August, igloo and magazine space was 85 percent occupied, and open ammunition sites were 80 percent occupied.

Materials Handled at Depots

The trend of tonnage received at and shipped from depots is illustrated in Chart 37, and a detailed tabulation is presented in Appendix E, page 108. Depot receipts increased almost continuously throughout the war, reaching a peak of 3,140,000 tons during May 1945, but with production sharply cur-

CHART 37

CHART 38

*All supplies other than high explosives.

tailed, receipts dropped off rapidly after V-E Day. Depot shipments followed a somewhat more erratic course, but rose to a peak during July and August 1944 of 2,380,000 tons per month. This was the only time that total shipments exceeded total receipts, thus resulting in a small net withdrawal from storage (Chart 37). Shipments also dropped very sharply after V-E Day.

The trend of receipts and shipments of general supplies at depots is only available

CHART 39

DEPOT OPERATIONS

beginning with the fourth quarter of 1943 (Chart 38). The two lines representing receipts and shipments run almost parallel, and at no time did shipments exceed receipts. In other words, there were net gains in stored tonnage of general supplies at depots throughout the war period.

In contrast to the general supply depots, the ammunition depots served their normal function as a reservoir to be drawn upon when needed, and throughout most of the year 1944 there were net withdrawals of ammunition from stored stocks (Chart 39). After the end of hostilities in Europe, shipments of ammunition from depots declined drastically, whereas receipts at first increased, causing very large additions to stored tonnage.

CHAPT 40

MILLION TONS DEPOT RECEIPTS BY SOURCE

Depot receipts from procurement reached a peak of 2,190,000 tons in May 1945, and by August had declined to 1,330,000 tons. During the same period returns to depots of goods previously issued were slowly rising; they amounted to 440,000 tons by August (Chart 40).

Shipments to ports by depots reached a peak of 1,620,000 tons in August 1944, and almost touched this high point again in January 1945. (Chart 41). These do not, of course, include all shipments to ports, since large quantities of supplies went direct from manufacturing facilities to ports of embarkation, completely by-passing the depot system. A more detailed analysis of depot receipts and shipments is found on page 109 of Appendix E.

CHART 41

DEPOT SHIPMENTS TO PORTS

Personnel and Equipment

The securing of adequate personnel and equipment to handle the constantly increasing load at depots was a problem throughout the war period. Mechanization of storage operations, using the palletized load, solved the problem. The number of fork lift trucks at depots increased from 900 to 6,200 in the three-year period from September 1942 to August 1945. A campaign was pushed to keep these fork lift trucks in service, and the

CHART 42

INDEXES OF TONS HANDLED AND EQUIPMENT USED
(4TH QUARTER 1943 = 100)

* For receiving and shipping employees.

DEPOT OPERATIONS

percent out of service dropped from 9 percent during the last quarter of 1943 to 3 percent at the close of the war. (See Appendix E, page 110)

The number of storage employees at depots was cut from 113,000 in June 1943 to 91,000 in September 1943, and this lower level was well maintained throughout the rest of the war period. (Appendix E, page 111. The number of receiving and shipping employees at depots was consistently reduced, even while the total tonnage handled was increasing. There were 51,000 receiving and shipping employees in October 1943, when depots handled 3,500,000 tons, in and out. In the peak

month of May 1945, when depots handled 5,300,000 tons of materiel, the number of receiving and shipping employees had been reduced to 35,000. The result of this increased efficiency is shown in Chart 42. The number of tons handled per man-day of receiving and shipping employee more than doubled in 18 months. The figure was 2.9 tons per man in October 1943 and 6.1 tons per man per day in May and June 1945. The very sharp decrease in tonnage handled after V-E Day caused a downward trend in the ton-handling ratio, although in August 1945 it was still 5.6 tons per man per day. The improvement would be even more striking if data were available for months prior to October 1943.

RATION SUPPLYS OVERSEAS

TYPES A AND B RATION SUPPLY OVERSEAS

In January 1942 a War Department letter "Supply of Overseas Departments, Theaters and Separate Bases" established the broad outline of overseas supply procedure and defined responsibilities of the key agencies through which the procedure was to function; i.e., the field force and overseas commanders, ports of embarkation, technical services and Zone of Interior depots. Under this system the supply of subsistence and fuel was automatic, that is by periodic shipments of quantities determined on the basis of the number of troops at the overseas base and the prescribed level of reserves in terms of days of supply.

A War Department letter of 11 July 1942 prescribed minimum levels with a maximum level to provide an "operating level" or cushion for consumption between supply convoys, or in the event of an interruption in supply. In general, the system of automatic supply of subsistence worked successfully throughout the war supplemented on occasion by requisitions from the overseas theater. The system was based on monthly reports from each theater indicating the status of supply, and thus had some of the elements of supply by requisition since it was based on actual rather than anticipated shortages. At the same time it did not wholly answer the purpose of the requisition method to fill specific needs as they arise, first because it operated periodically, irrespective of emergency demands and second because it replenished overseas stocks only up to a predetermined level which was not always sufficient for extraordinary needs.

Appendix F, pages 112 and 113, the supply status of types A and B rations*(basic rations for troops) is compared with established minimum and maximum levels for the more important theaters at the end of each month. All data are shown in terms of balanced theater days of supply. A balanced theater day of supply represents the quantity of rations required to supply theater strength

* TYPE A RATION is a balanced ration, including perishable items, for use through regular mess units.

TYPE B RATION is a balanced ration, issued to troops in the field for use through regular mess units; usually consists of non-perishable items but may include perishable items when available locally or when shipping conditions permit.

with a balanced diet for one calendar day. Thus, the actual quantity represented by a day of supply varied for any given theater with variations in theater strength and with changes in the menu provided, and also varied between theaters. Excluded from the data shown in Appendix F are supplies on hand of unbalanced components of types A and B rations.

It will be noted that authorized theater levels were generally reduced as supply lines became less liable to interruption and shipping facilities became more adequate.

In the tables in Appendix F, the supply status is reflected by a comparison of the days of supply actually on hand in the theater at the end of the quarter with minimum and maximum levels. The system of supply provided for an additional number of days to be placed in the "pipe-line of supply" (that is, enroute to the theater) over and above the maximum theater level. This was a special level including authorized projects, approved requisitions for quantities beyond authorized theater levels and shipping time to the theater. The effect of the special level was to establish the maximum theater level as the target for quantities expected to be on hand in the theater at any given point of time.

During the initial phases of building up oversea theater strength, supply of rations often outstripped maximum authorized levels as shipments were made against projected theater strength. This was particularly true, for example, in the European Theater through October of 1943 when the number of days of supply on hand was far above the authorized maximum level. After October 1943 stocks on hand were in line with authorized levels except for the period April-August 1943 when days of supply on hand fell below the minimum level for the European Theater because other types of material were in higher shipping priorities.

For operating purposes the supply status of any given theater was regarded as generally satisfactory if the balanced days of supply on hand were above the minimum authorized level and did not exceed the maximum level by unwarranted amounts. Supply of rations to overseas theaters was maintained in reasonably close alignment with authorized levels throughout the war.

NOTE: The dollar value of deliveries of all subsistence is discussed in the Procurement Chapter, and recorded in Appendix A, page 80.

TRANSPORTATION

INLAND TRANSPORTATION

Troop Movements

The railroads handled more than 95 percent of the troops transported within the U.S. during World War II. Almost 33,000,000 men were included in organized troop movements of 40 men or more. (See Appendix G, page 114). The average length of haul for these organized moves was about 1,000 miles per man. In addition there were many million troop moves in groups of less than 40, and as individuals.

CHART 43

TROOPS MOVED BY RAIL*

* In organized groups of 40 or more.

As will be noted in Chart 43, there were two peaks in the army movement of troops within continental U. S. The first occurred in April 1943 (1,040,000 troops). This peak was associated with large inductions into the Army, a very heavy training schedule, and increasing shipments of troops overseas. Internal troop movements then dropped to about 500,000 in April 1945. The second peak was the last month of the war (August 1945). Of the 1,170,000 troops moved that month, about 490,000 were returning from overseas.

The Transportation Corps operated 44 Army Reservation Bureaus, with 48 branch offices located in railway stations in key cities throughout the United States. These bureaus assisted in the movement of officers, enlisted men and civilian employees of the War Department traveling under competent orders, and assisted military personnel traveling on leave of absence or furlough. Dur-

ing the 29 months for which records are available (Apr. 1943 - Aug. 1945), these bureaus handled 5,500,000 requests for reservations. They succeeded in obtaining reservations for 96 percent of the requests.

The War Department owned a reserve pool of about 11,000 buses on 31 August 1945. The majority of these buses were in official use by the War Department, but about one-third were used for transporting workers to and from employment at facilities vital to the war effort. Many of these buses were leased to private contractors for operation. The allocation of these buses was handled by the Army Transportation Corps.

Freight Handled

Army freight (as measured by rail freight ton-miles) increased from 900 million ton-miles in December 1941 to 7,930 million ton-miles in June 1945, after which it fell off sharply. (Chart 44) At its peak, army freight shipments accounted for about 12.5 percent of total rail shipments within the U. S.

The army shipped 293 million tons of freight by rail 214 billion ton-miles, making an average length of haul per ton of 730 miles. In addition about 1,000,000 tons were shipped by rail express, 26,500,000 tons by motor truck, and somewhat more than 4,000,000 tons via inland waterways. (Appendix G, Page 115).

Every effort was made to use the transportation capacity of the country at its high-

CHART 44

WAR DEPARTMENT FREIGHT MOVED BY RAIL

TRANSPORTATION

est efficiency. Freight cars were loaded to capacity wherever possible, and an illustrated monthly bulletin was published by the Transportation Corps calling attention to violations of proper loading procedures.

The freight car situation became critical in the fall of 1944, and for the period February-April 1945 there were serious car shortages. As a car saving means, the Army Service Forces put on a vigorous campaign to avoid waste in the time taken to load and unload cars. Although demurrage does not begin until after the first 48 hours, the goal of the Army Service Forces was to release cars within 24 hours. The proportion of cars released within 24 hours was increased from 62 percent in July and August 1944 to 71 percent in April 1945. (Appendix G, Page 117)

Another car-saving activity operated by the Army Transportation Corps was the Army-Navy Consolidated car service. This agency

CHART 45

consolidated less than carload shipments at important points, dispatched them through as solid cars, and then redistributed them near the destination points. As a great deal of this movement was west-bound, it was possible to use 46,000 refrigerator cars which would normally return empty in this service. This operation not only saved cars; but of much greater importance to the Army and Navy was the saving in time, and the improved control of their shipments. Incidentally, a great

deal of money in rail rates was also saved. The peak of consolidated car activity was reached in May 1945, when 109,000 tons were dispatched. (Appendix G, page 117)

PORT ACTIVITIES

Troops and Other Passengers Handled

The ports of embarkation processed, inbound and outbound, 10,400,000 troops and other passengers during the war. The trend is shown in Chart 45. The outbound movement predominated through April 1945. Beginning with May troops returning from overseas outnumbered those going overseas, and by the end of the war the greatly accelerated return of troops from overseas was already evident. The last month of the war (August) was the busiest war month at ports in the handling of passengers, when 582,000 men were processed.

The war record of the eight ports which handled passengers is as follows:

Port	Total	Outbound	Inbound
TOTAL	10,352,146	7,293,354	3,058,792
New York	4,332,829	3,172,778	1,160,051
San Francisco	2,173,514	1,669,709	503,805
Hampton Roads	1,210,842	725,880	484,962
Boston	1,161,555	740,705	420,850
Seattle	820,315	593,821	226,494
New Orleans	277,540	166,696	110,844
Los Angeles	261,146	188,270	72,876
Charleston	114,405	35,495	78,910

At the close of the war the ports operated twelve staging areas with a capacity of 134,000 in-transit troops. (Appendix G, page 118) At the time when outbound troops were in the ascendancy, staging areas had a capacity almost double that at the close of the war, the peak month being May 1943, when 24 staging areas had a capacity of almost 249,000 men.

Cargo Handled

The ports of embarkation were not only the place where ships picked up troops and cargo for overseas shipment. The theater commands were independent of the major continental U. S. (Air, Ground, and Service) forces, and the ports were the connecting link of the Army Service Forces in their dealing with these independent overseas commands. The ports processed the paper work involved in supplying the troops overseas, whether such supply was automatic, semi-automatic or on a requisition basis. Nearly all the knowledge in the ASF concerning overseas supply matters was obtained by or through the ports. The ports not only provided staging areas for the processing of troops, but also operated

TRANSPORTATION

ten Holding and Reconsignment Points for temporary storage of cargo destined for overseas (in addition to the storage space at the ports). An indication of the size and complexity of the ports' job is the fact that they employed more than 180,000 people during the peak war activity.

The ports handled 135,000,000 measurement tons of cargo during the war. The record of the ten cargo handling ports was as follows:

Port	Total Thous M/T	Outbound Thous M/T	Inbound Thous M/T
TOTAL . .	134,929	126,788	8,141
New York . . .	39,668	37,800	1,868
San Francisco	25,132	23,685	1,448
Seattle . .	14,085	11,885	2,200
Hampton Roads	13,300	12,522	778
Boston	9,864	9,398	466
Los Angeles .	9,023	8,645	379
New Orleans .	7,737	7,241	496
Baltimore . .	6,791	6,504	287
Philadelphia .	5,961	5,893	68
Charleston . .	3,368	3,216	152

The tonnage of supplies going through the ports increased steadily throughout the war until March, 1945 (Chart 46), when about 6,130,000 measurement tons were handled. Subsequent war months showed a moderate decline. In the last few months of the war cargo was being returned from overseas at the rate of about 700,000 tons per month.

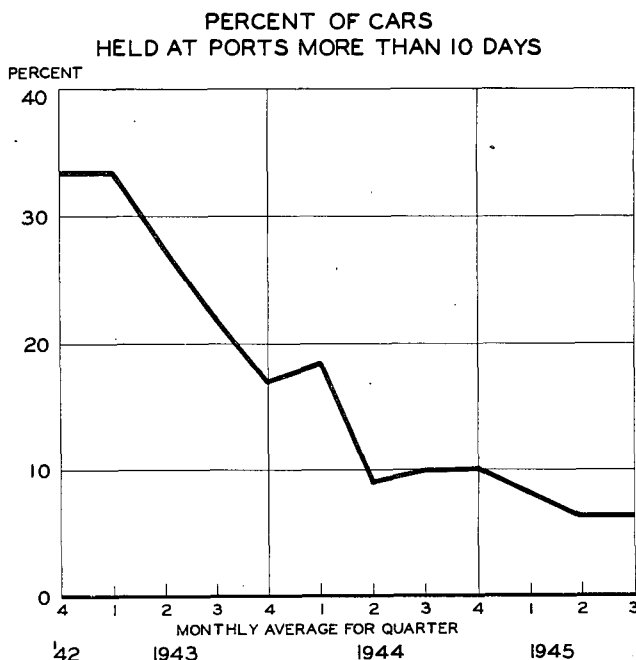

CHART 46

During World War I the transportation system of the country got into the worst snarl in history. There was congestion at ports, in rail yards and on the railroads. The confusion was so great that the government was forced to take over the entire rail system, and this only alleviated but did not cure the situation. The basic difficulty was a lack of coordination in scheduling of shipments. Supplies were sent to the ports regardless of whether there happened to be any ships there to take them away, and the railroads refused to abandon their usual competitive practices.

It was determined that this experience would not be repeated in World War II. The railroads continued to operate under their own private management, and there was not a single day of port congestion. The only difficulty the railroads had was caused by most

CHART 47

unfavorable weather, and this was of very short duration. The desired coordination was brought about by a system of permits set up by the Office of Defense Transportation and supervised for army freight by the Traffic Control Division of the Army Transportation Corps. The situation at ports was watched constantly and some of the more important data are shown in Appendix G, page 119.

At no time were the export cars on hand at ports greater than 50 percent of the capacity for such cars, and at the end of the War it was 23 percent. It was established as a goal that no car would be held at the port more than 10 days, and the almost constant progress towards this goal throughout the War period is illustrated in Chart 47. The percent of cars held more than 10 days at ports

TRANSPORTATION

dropped from 48 in July 1942 to 5 during July 1945. Another indicator of port congestion is the amount of time it would take to unload all cars at the then current rate of unloading, commonly referred to as the days "bank". It was informally agreed that this "bank" should not exceed 7 days. As shown in Chart 48, the days "bank" was very seldom above 7 days and positive progress was made throughout the war in reducing it. At the end of August 1945 there was a 3.3 days "bank" on hand at the ports, and this despite the fact the termination of the war cancelled many shipments already enroute to port. (Special procedures were set up and used on both V-E and V-J days to turn around all embargoed freight enroute to ports).

CHART 48
DAYS BANK OF EXPORT FREIGHT
AT U.S. PORTS

The army shipped about 42 percent of all the export freight shipped during the War, and the Navy about 13 percent, making 55 percent for the armed forces. The British took about 22 percent, the Russians 8 percent, and the balance of 15 percent was for other lend-lease, and commercial. Further details will be found in Appendix G, page 120.

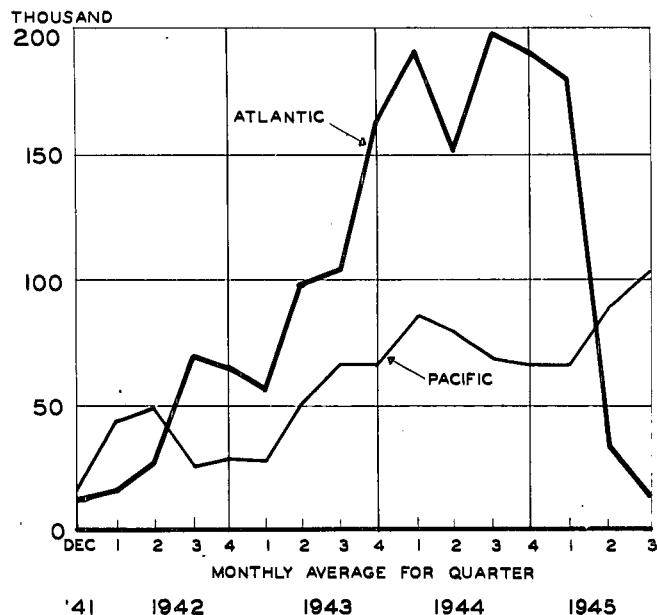

OCEAN TRAFFIC

Embarkations

Of the total 7,290,000 embarkations during the war, 6,900,000 or 95 percent were troops. Other passengers included 250,000 Navy men, 110,000 civilians, 20,000 prisoners of war and 10,000 allied military personnel.

There were 4,620,000 men sent to Atlantic theaters and 2,670,000 to Pacific theaters. The effect of V-E Day on embarkations to Atlantic theaters is illustrated in Chart 49. The beginning of redeployment to the Pacific

CHART 49
PASSENGERS EMBARKED TO
ATLANTIC AND PACIFIC THEATERS

is shown in increased troop movements to that area.

As shown in Appendix G, page 121 the European theater received the most men, about 3,340,000. Pacific Ocean Areas, the Southwest Pacific Theater, and the Mediterranean Theater all received an almost identical number of troops, 1,100,000 each; or all put together, about the same as the European Theater.

Of the total troops sent overseas, about 27 percent were Infantry troops, 15 percent Air Corps, 10 percent Engineers, 7 percent Field Artillery, and others in smaller proportions. A detailed breakdown is given in Appendix G, pages 123 through 127.

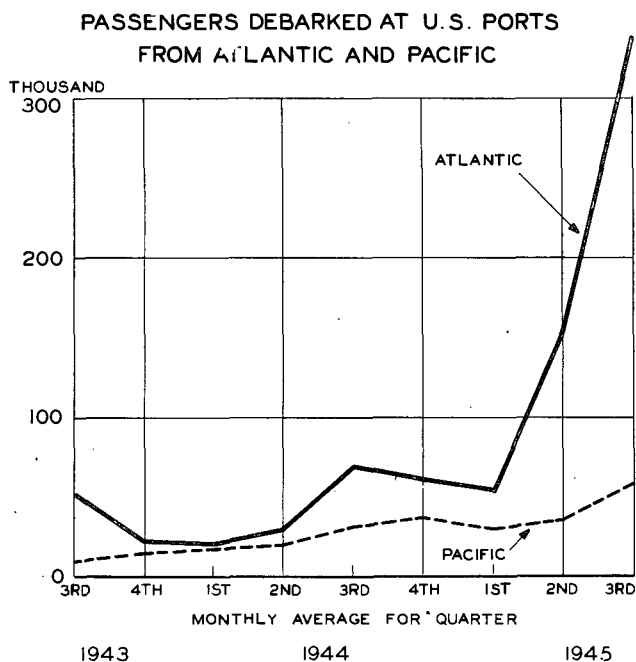

Debarications

As shown in Chart 50, debarications were at a low level until V-E Day, after which returning troops from Atlantic Theaters increased very rapidly. Returning troops made up 73 percent of the debarkees. Total passengers debarbed for the War (through V-J Day) was 3,060,000. Besides the troops (2,250,000 men) there were 450,000 prisoners of War, 170,000 Navy men, 120,000 civilians, and 75,000 others, mostly allied military personnel. Further details will be found in Appendix G, pages 127 and 128.

In the first fifteen weeks after R (Redeployment) Day ending 25 August, the European and Mediterranean Theaters reported debarications of 1,040,000 troops, of which 885,000 were returned to the United States, and about 155,000 were shipped direct from Europe to Pacific Theaters.

TRANSPORTATION

CHART 50

Cargo Shipped Overseas

Of the 127,000,000 measurement tons of cargo shipped overseas by the Army during the War, 78,000,000 went to Atlantic Theaters, and 49,000,000 went to Pacific Theaters. About 36 percent of the total, (45,000,000 tons) went to the European Theater, about 28,000,000 tons (22 percent) went to the Mediterranean Theater, Pacific Ocean Areas and the Southwest Pacific Theaters, each received about 18,000,000 tons, or about 14 percent each. Monthly figures for all theaters are shown in Appendix G, pages 131 and 132.

CHART 51

Cargo shipments to Atlantic theaters reached their peak in March 1945, whereas those to the Pacific continued to increase through June 1945. After these dates cargo shipments to both areas dropped sharply (Chart 51).

On the measurement tonnage basis, Quartermaster supplies were the most important shipped overseas, accounting for 27 percent of the total. The more important services follow in this order; Ordnance 24 percent, Air Corps 15 percent, and Corps of Engineers 14 percent. Detailed data by services are given in Appendix G, pages 129 and 130.

The army shipped 11,500,000 short tons of high explosives overseas during the War; 9,500,000 tons of this was for the use of the Army, and the other 2,000,000 tons was lend-leased to allied nations. (Chart 52 and Appendix G, page 135.)

A little more than 85,000 airplanes were dispatched overseas during the war, of which 48,000 (56 percent) went by sea, and the remainder, 37,000, were flown over under their own power. All the medium and heavy bombers were flown over. Both the light bombers and

CHART 52

transports were about half shipped by sea and half flown under their own power. Nearly all the fighters and all the gliders went by sea. The trends are shown in Chart 53, and more detailed data are presented in Appendix G, pages 136 and 137.

Cargo Received from Overseas

The ports processed 8,140,000 measurement tons of cargo returned during the war, of

TRANSPORTATION

which a little more than half (4,170,000 tons) originated in the Atlantic Theaters, with 3,970,000 tons returned from Pacific theaters.

CHART 53

AAF PLANES DISPATCHED OVERSEAS

The heavy volume of returns from Pacific theaters during 1944 (Chart 54) for the most part came from Alaska, which had become an inactive theater. The effect of V-E day on cargo returned from Atlantic theaters was evident in the eight-fold increase from the first to the third quarters of 1945. Detailed data by theaters, services and ports are given in Appendix G, Pages 138 through 143.

CHART 54

CARGO RECEIVED FROM OVERSEAS THEATERS

For the first fifteen weeks after R-Day ended 25 August 1945, the European and Mediterranean theaters unloaded 1,282,000 long tons of cargo, of which 706,000 tons were returned to the United States, and 576,000 tons were shipped direct from Europe to Pacific Theaters.

SHIPPING SITUATION

At no time during the war did the United Nations have enough ships to fulfill their commitments. Sinkings of merchant ships exceeded construction during the first half of 1942 (Chart 55). By the summer of 1944 the submarine menace was hardly more than a nuisance, and yet with the increased number of troops overseas, and the stepped up military operations, in spite of construction exceeding 1,000,000 deadweight tons per month (Chart 55), the quantity of shipping available never caught up with the demand. This was true even after V-E day, for a ship could make three round trips on the Atlantic run to one on the Pacific run, and the speed of redeployment was directly dependent on the amount of shipping available. Therefore, every expedient possible was employed to improve utilization of shipping.

Construction, Losses and Inventory of Dry Cargo Ships

The United Nations constructed about 48,400,000 deadweight tons of dry cargo ships (ocean going ships of 1600 gross tons or more) from December 1941 through August 1945. Of this about 80 percent was constructed in the United States. At the end of the War the United Nations had 68,000,000 tons of shipping available to it, of which 58 percent (about 39,200,000 tons) was available to the United States. (Appendix G, page 144)

In addition to the dry cargo vessels, the United Nations had, at the end of the War, 22,300,000 deadweight tons of tankers, of which 14,900,000 tons (67 percent) was available to the United States. However, as shipment of cargo via tanker was at no time a significant responsibility of the Army, all data and comment in this section refer to dry cargo vessels only.

Of the 48,000,000 tons of dry cargo shipping constructed during the War, about one-third, 16,000,000 tons, was lost; leaving a net gain for the War of 32,000,000 tons. Most of the losses were caused by enemy submarines, but all losses, including marine disasters are included in the above figure.

The losses were especially severe during the early months of the War. Through April 1942, losses exceeded gains through new construction for every month (Chart 55). The average loss for the year 1942 was 746,000 deadweight tons per month.

TRANSPORTATION

CHART 55

Vessels in Army Service

Most vessels under the control of the United States were pooled, and allocated by the War Shipping Administration (WSA). Although a single pool of all United Nations shipping was never formed, there was very close coordination between Britain and the United States in the utilization of shipping.

The army, as such, owned, or bareboat chartered very few ships, most ships under Army control being allocated to it by the WSA. On an outbound voyage, a ship might be allocated to the Army, and on completion of discharge, revert to the WSA for other allocation. Therefore the number of ships in Army service fluctuated from day to day. The data presented in Chart 56 and Appendix G, page 145 are inventories as of the last day of the month.

The number of ships in Army Service reached a peak of 1,765 in December 1944. This was also the month of highest cargo capacity, 17,700,000 measurement tons. The troop capacity of army ships was rapidly increasing during the closing months of the war, being 666,000 on 31 August, 1945.

At the time of the European invasion, a great number of Army ships were retained in the theater by the theater commander for local use. The number increased from 75 in April 1944 to 325 in June 1944. As ports on the continent were opened, the need for transshipment from England became less, and by the end of August 1945, there were only 13 army

ships retained in Atlantic Theaters for local use. This heavy drain on army shipping at the time of the invasion brought about an especially critical shortage of shipping for other purposes.

The Pacific Theaters, where the Army was doing considerable island hopping and rolling

CHART 56

TRANSPORTATION

up the bases from the rear; about one ship in local service was required for every two ships in trans-Pacific service. (Appendix G, page 145).

Overseas Port Performance

As a device to encourage improvement of ship utilization records and speed of unloading ships at overseas ports in the several theaters, records of performance were circulated to the theaters monthly.

During the month of April, 1945, which was the last full month of operations as a two-front war, the major theaters ranked in rate of ship unloading as shown in the following table. This table illustrates the tremendous advantage of unloading ships where there are ample facilities.

Theater	Measurement Tons per Ship per Day Unloaded
<u>ALL</u>	986
India-Burma	2,917
Middle Pacific	1,529
European	1,367
Mediterranean	1,184
Alaskan	672
Western Pacific	387

Comparing the Pacific areas; the Middle Pacific, which was an inactive theater with some good ports, unloaded at more than four times the rate of the Western Pacific, which had practically no good ports. But the India-Burma theater, which was inactive and had ample unloading facilities did twice as good a job as the Middle Pacific. Monthly trends for theaters are shown in Appendix G, page 146.

INTERNATIONAL AID

The end of the war brought to a close the military Lend-Lease program of the War Department. On 21 August instructions were forwarded to stop shipment of all military Lend-Lease items even at port or aboard ship, if the latter course were practicable.

TOTAL VALUE - 11 MARCH 1941 to 21 AUGUST 1945

Delay in the processing of documents, particularly in regard to theater transfers overseas, makes an exact statement of the value of War Department Lend-Lease impossible at this time, but the total is within a range of from 22 to 24 billion dollars; of this the ASF supplied 15 to 16 billion dollars worth, and the balance was made up of Air Forces materiel. The War Department's share was about half the total Lend-Lease of all agencies combined.

CHART 57

RECIPIENTS OF WAR DEPARTMENT MILITARY LEND LEASE

11 MARCH 1941 - 21 AUGUST 1945

The United Kingdom received about 62 percent of all War Department military Lend-Lease (Chart 57 and Appendix H, page 149). The USSR was second in importance, with 25 percent, and the remaining 13 percent was divided as follows: 5 percent was for France; 4 percent for China; and 4 percent for all other countries combined. Probably 90 percent or more of the War Department Lend-Lease effort was used in aid to our allies for the defeat of Germany.

The distribution of ASF Lend-Lease by technical service is presented in Chart 58 and shown in detail in Appendix H, page 148. Nearly three-fourths (72 percent) represented Ordnance items. Other services accounted for the following percentages: Quartermaster, 9 percent; Signal, 7 percent; Engineers, 5 per-

cent; Transportation, 4 percent; Chemical Warfare, 2 percent; and Medical, 1 percent.

CHART 58

ASF LEND - LEASE TRANSFER BY TECHNICAL SERVICE

11 MARCH 1941 - 21 AUGUST 1945

The trend of Lend-Lease transfers is indicated in Chart 59. Peak activity occurred during the latter half of 1943 and the first half of 1944.

CHART 59

TREND OF ASF LEND-LEASE TRANSFERS

INTERNATIONAL AID

The termination of Lend-Lease was very sudden, and certain non-armament items already in the supply "pipe-line" were permitted to continue to destination (amounting to about \$50,000,000 to the USSR and \$200,000 to the UK). These shipments, although originated as Lend-Lease supplies, were separately financed, and are not a part of the Lend-Lease accounts summarized here.

SUMMARY OF IMPORTANT ITEMS

The status of assignment, shipment, and repossession of important items was summarized monthly in Section 2G of the MPR (INTERNATIONAL AID). The final issue of Section 2G is dated August-September 1945. A financial summary of the items shown in this volume indicates shipments with a net value of \$8,049,367,000. The following paragraphs summarize the material in this report.

There were sixteen items with a value in excess of \$100,000,000, as shown in the following table. All but one were Ordnance items, the exception being steam locomotives of the 2-10-0 wheel arrangement, supplied by the Transportation Corps. In money value, tanks were of the greatest importance, followed very closely by trucks. Most of the tanks went to the UK, and most of the trucks to the USSR.

The single item with the greatest dollar value supplied foreign governments by the Signal Corps was wire. The most important general class of goods was radio sets, most of which went to the UK.

For the Corps of Engineers, the single item with the greatest dollar value was airplane landing mats. However, construction machinery, especially tractors, was the most important general classification of Engineer supplies. The proportions of Engineer equipment going to the UK (68 percent) and USSR (30 percent) were somewhat higher than the all-service averages of 62 and 25 percent, respectively.

Incendiary bombs were by far the largest contribution of the Chemical Warfare Service to Lend-Lease countries. The UK received 87 percent of Chemical Warfare deliveries.

Clothing was the most important Quartermaster contribution, although wool blankets was the largest single item. The UK received 50 percent and the French Forces 28 percent of the reported Quartermaster equipment.

The Transportation Corps was the only technical service which did not have the UK as the principal customer for its equipment. The USSR led with 59 percent of the Transportation total, the balance (41 percent) being shipped to the UK.

LEND-LEASE ITEMS IN EXCESS OF \$100,000,000

CIVILIAN SUPPLY

BASIS OF ARMY PARTICIPATION IN CIVILIAN SUPPLY

Military necessity required that the Army provide such essential supplies to civilian populations in theaters of operation as may be necessary to prevent disease and unrest that would be prejudicial to the accomplishment of the military mission. In addition, in November 1943, President Roosevelt directed that the Army assume the initial burden of shipping and distributing relief supplies not only in connection with active military operations but in the event of a German collapse.

Accordingly, military authorities of the United States, United Kingdom, and Canada combined to provide essential civilian supplies for the Mediterranean and Northwestern-European areas as a matter of military necessity, to implement the operations undertaken in those zones.

By letter of May 21, 1945, President Truman recognized that, except for occupied areas, military necessity for furnishing civilian supplies for Northwest and Mediterranean Europe was drawing to a close. Accordingly, with minor exceptions, Army responsibility had been terminated in all liberated areas (including Italy) with August shipments. Issues within the theater, however, continued to be an Army responsibility through October.

With the progressive relinquishment of military responsibility, starting with France on June 1, 1945, the liberated governments with paying capacity continued to secure needed supplies through the mechanism of national import programs, with the Foreign Economic Administration serving as the U. S. procuring agency. The United Nations Relief and Rehabilitation Administration provides supplies to countries that are unable to pay.

Prior to August 1945 the Army had unilateral civilian supply responsibility for the Philippines and a small part of the Netherlands East Indies. In accordance with the above mentioned policy, such responsibility with minor exceptions was terminated with August shipments. Since August, the Army has had responsibility in the Pacific for Japan and the United States Zone in Korea.

QUANTITY AND VALUE OF WAR DEPARTMENT CIVILIAN SUPPLIES

During the period from July 1943 to the end of the war, the United States shipped about 6,800,000 long tons of civilian supplies overseas, valued at slightly less than \$1,000,000,000. A very small proportion was

sent to Pacific areas--by value about 6 percent and by volume only 3 percent of the total. (Chart 60 and Appendix J, page 150) These figures represent shipments from U.S. ports and do not take into account theater transfers of civilian supply stocks from one area to another or transfers to and from regular military stocks.

CHART 60

CIVILIAN SUPPLY SHIPMENTS - BY AREA
JUL 1943 - AUG 1945

The trend of civilian supply shipments is shown in Chart 61. The peak came in the second quarter of 1945, but the policy of turning over civilian supply responsibility in liberated areas to other agencies brought about a rapid decline in this activity after V-J Day.

The principal commodities involved in civilian supply are shown in the following

CHART 61

TREND OF CIVILIAN SUPPLY SHIPMENTS

CIVILIAN SUPPLY

table. It will be noted that foodstuffs make up 63 percent and coal 34 percent of the total tonnage shipped. These two items account for 73 percent and 6 percent, respectively, of the total dollar value. All petroleum

products have been excluded from the table because they were shipped as military supplies and issued to civilians from pooled United States - United Kingdom stocks in the theaters.

U.S. SHIPMENTS OF CIVILIAN SUPPLIES TO ALL AREAS July 1943 Through August 1945

(Long Tons)

ADMINISTRATION

ARMY POSTAL SERVICE

Two innovations in handling of mail for personnel overseas were introduced during the war period. V-Mail was introduced in June 1942 and was used increasingly until May 1944 when 64,000,000 letters were handled. From that time V-Mail declined in popularity until by August 1945 only 14,000,000 V-letters were handled. A total of 1,251,000,000 V-letters were dispatched to and received from overseas. This total was divided almost equally between outgoing and incoming letters. The second innovation, use of air transport for dispatch of conventional letter mail to overseas personnel, was probably the most important cause of the unpopularity of V-Mail. It may be noted that as use of air increased, the volume of V-Mail decreased. Chart 62 shows the relative increase in air movements of letter mail as well as the total volume handled. Chart 63 shows the estimated weight of parcel post and postal supplies dispatched overseas by the Army Postal Service. Detailed statistics, by months, on Army postal activity are shown in pages 151 and 152 in appendix K.

CHART 62

GENERAL PRISONERS

The problem of confinement of general prisoners increased steadily during the war period. General prisoner strength rose from 1,496 at the beginning of the war to 33,552 on 31 August. Chart 64 shows the general prisoner census by type of confinement. Pages

CHART 63

the Office of the Judge Advocate General. Chart 65 depicts the rates at which cases have been reviewed for legal sufficiency and clemency. Statistics on review of courts martial records are contained in page 156, Appendix K.

There is a limited amount of information available about the number and type of claims

CHART 66

ADMINISTRATIVE SETTLEMENT OF CLAIMS BY TYPE OF CLAIM

processed by the Judge Advocate General's Office, the ASF Service Commands, and the AAF Technical Service Commands prior to mid-1943. Available records indicate that there were 105,000 claims processed by the agencies since that date, 81,000 of which were processed by the Office of the Judge Advocate General and the Service Commands of the ASF. Page 156, Appendix K, shows the monthly statistics on claims activity within each of the three types of processing offices. Chart 66 shows the frequency of each of the several types of claims, based upon a representative quantity of 73,282 claims processed by the Office of the Judge Advocate General and the ASF Service Commands for which detailed records are available.

PRISONERS OF WAR

The number of Americans officially reported in enemy hands as prisoners of war reached a peak of 91,000 in May 1945. Most of these prisoners were in the hands of the authorities of Germany, with the remainder under Japanese control. The number reported in the custody of the Italians was never large. Page 157, Appendix K, shows the total number of prisoners officially acknowledged to be in the hands of the enemy at the end of each month during the war.

Detention and administration of enemy prisoners of war within the continental United States began in April 1942 when one Japanese prisoner arrived, and increased slowly until April 1943 when 5,007 prisoners were on hand. The rate of arrivals increased sharply from that time until May 1945 when 425,206 prisoners were located in the United States; this number included 371,018 Germans, 50,273 Italians, and 3,915 Japanese. The monthly prisoner census is shown on Page 158, and the accessions, losses, and strength by nationality are shown on pages 158 and 159, Appendix K.

In April 1944, certain volunteer Italian prisoners of war were organized into Italian service units to permit more efficient employment of this type of personnel. These units were organized along the lines of units of the U. S. Army and functioned in the same manner, under their own officers. These units were activated both in the continental United States and overseas, and performed a multitude of duties of all types at Ports, Depots, Arsenals and Posts, Camps or stations. The number of such units and the number of personnel comprising such units in the continental United States varied within small limits from the inception of the plan to the end of the war. There were about 190 units at a strength of about 1,000 officers and 32,000 enlisted men.

Every effort was made to assure useful employment of the maximum number of prisoners

ADMINISTRATION

available. Efficiency on this score increased steadily until at the close of the war more than 90 percent of the possible total man-months were spent in useful labor. Pages 160 and 161, Appendix K, contain details of employment of prisoners of war by months.

SECURITY

The total security program was large and varied. During the war period, 2,344,521 individual loyalty investigations were conducted. Early in 1942 the ASF assumed supervision and coordination of a large number of plant protection activities. In September 1943, 11,966 facilities were being supervised. An auxiliary military police force, numbering 250,715 men at its peak in July 1943, was supervised and inspected. In addition, reproduction facilities were investigated and classified and approved for reproduction of classified printed material. A measure of the security work performed is shown on pages 162 and 163, Appendix K.

SAFETY

Prior to January 1944 there was only limited consolidation of records of injury to military or civilian personnel. At that time the Office of the Provost Marshal General began assembling such data as were then currently available and publishing such consolidated information in a Monthly Progress Report. Coverage was gradually extended until, by the end of the war, a comprehensive set of statistics on injuries within the continental United States, by months, were being reported

The available data from January 1943 to the end of the war are reported in pages 164 and 165, Appendix K.

ARMY EXCHANGE SERVICE

The Army Exchange Service grew from a \$17,000,000-a-month business in December 1941 to one grossing \$75,000,000 by December 1943. The total gross sales from December 1941 to August 1945 amounted to \$2,427,910,000. The peak number of exchanges operated in the continental United States was 755, reached in January 1944. Appendix K, page 166, shows detailed data on the number of exchanges, dollar value of sales, and percent of net profit.

ARMY MOTION PICTURE SERVICE

The AMPS started the war with 369 theaters with a total seating capacity of 260,647 at 230 posts. By February 1944 it had expanded to 1,186 theaters on 629 posts, with a seating capacity of 788,123. Yearly and total attendance is shown below:

<u>Year</u>	<u>Attendance</u>
<u>TOTAL</u>	<u>632,426,000</u>
1942	104,143,000
1943	224,548,000
1944	205,345,000
1945	98,390,000

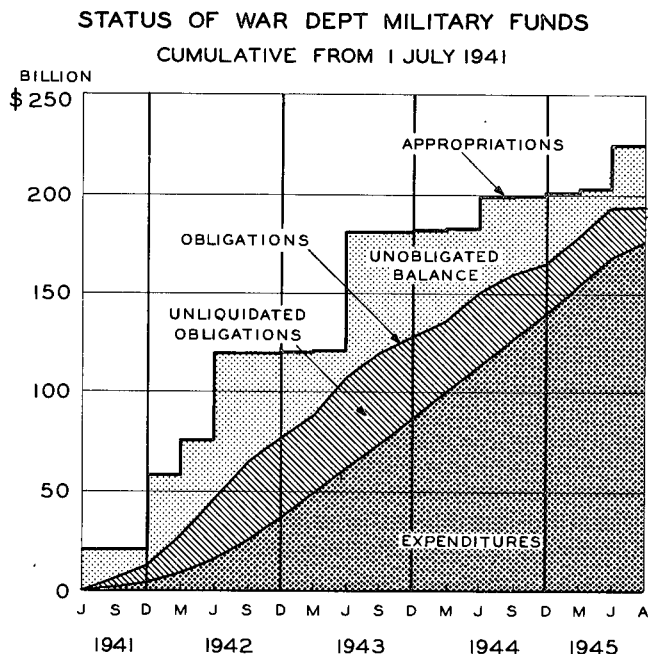

Page 166, Appendix K, shows the available capacity at the end of each month and the total attendance during each month of the war

FISCAL

WAR DEPARTMENT FUNDS

Total military funds appropriated to the War Department during the period from 1 July 1941 to 31 August 1945 amounted to about \$225,000,000,000 (See Chart 67). During the fiscal year ending 30 June 1941, total appropriations had been only \$17,000,000,000, but in the following year, under the stimulus of the Pearl Harbor attack, they were about \$76,000,000,000. New amounts appropriated in subsequent years did not again reach this peak but the reappropriation of very large unobligated amounts carried over from earlier fiscal years continued to insure adequate funds for later budget programs.

CHART 67

War Department obligations during the fiscal year 1941 were at a monthly rate slightly in excess of \$1,000,000,000. After Pearl Harbor this rate increased to reach a peak of \$6,700,000,000 during the quarter ending 30 September 1942. During the latter part of the war, as deliveries against old obligations increased, there was a tendency for a moderate decline in new obligations, and during the quarter ending 31 December 1944 they fell to less than \$2,000,000,000 a month.

World War II obligations of military funds by the War Department (from 1 July 1941 to 31 August 1945) totaled \$194,000,000,000. If obligations of the fiscal year 1941, during which a preparedness program was initiated, are included, the total for the War Per-

iod amounts to \$207,000,000,000. (Appendix L, page 167).

In contrast with the extremely rapid growth of obligations during the early part of the war, War Department expenditures increased somewhat more slowly, keeping pace with the steady expansion of materiel deliveries and the growth of Army strength. During the fiscal year 1941, expenditures averaged less than \$350,000,000 per month. This increased to about \$2,000,000,000 during the latter half of the fiscal year ending 30 June 1942, reached \$4,300,000,000 during the year ending 30 June 1944, and was at a peak of about \$5,000,000,000 during the quarter ending 30 June 1945.

For the entire War Period from 1 July 1941 to 31 August 1945 expenditures of military funds were \$176,000,000,000. Including the fiscal year ending 30 June 1941, the total was \$180,000,000,000. Of the latter amount, \$118,900,000,000 was for procurement of materiel including subsistence. (Appendix L, pages 167 through 171).

ASF OBLIGATIONS AND EXPENDITURES

Out of the total of \$194,000,000,000 of War Department obligations, World War II obligations against ASF appropriations accounted for \$127,000,000,000. (Including the fiscal year 1941, ASF obligations were approximately \$134,000,000,000.) The rate of ASF obligations increased from less than \$600,000,000 per month in the fiscal year ending 30 June 1941 to almost \$4,000,000,000 during the six months ending 30 September 1942. No further increase took place and there was some tendency for a decline until the winter of 1945 when, following the German December offensive, monthly obligations reached the record peak of more than \$4,000,000,000 during the quarter ending 31 March 1945. (Appendix L, page 167).

Expenditures under ASF appropriations for World War II (1 July 1941 to 31 August 1945) were \$119,000,000,000 or 67.6 percent of the corresponding War Department total. From a monthly average of about \$250,000,000 during the year ending 30 June 1941, they increased to a maximum of \$3,600,000,000 per month in the quarter ending 30 June 1945. Chart 68 on the next page emphasizes the tremendous growth of ASF activities by presenting expenditures for the fiscal year ending 30 June 1945 for each major ASF appropriation as a percent of total expenditures for all ASF appropriations combined during the fiscal year ending 30 June 1941.

During the later year expenditures under four individual appropriations exceeded the

FISCAL

CHART 68

ASF EXPENDITURES FISCAL YEAR 1945 INDIVIDUAL APPROPRIATIONS AS PERCENT OF ALL FISCAL YEAR 1941 APPROPRIATIONS COMBINED

combined total for all ASF appropriations during the fiscal year ending 30 June 1941. For two other appropriations they were more than half the combined total of the earlier year. (Appendix L, pages 167 and 168.)

FISCAL SERVICES FOR WAR SUPPLIES

To facilitate war procurement the Army Service Forces from time to time established fiscal programs designed to be of assistance to war suppliers. Two such programs were employed to provide needy suppliers with working capital. Under one of these, almost \$7,000,000,000 was disbursed as advance payments on war contracts while under the other guarantees of loans by commercial institutions to war suppliers (frequently subcontractors not eligible for advance payments) amounted to \$7,800,000,000. By 31 August 1945, however, recoupments and repayments had reduced the amounts still outstanding under each of these programs to a sum of less than \$1,000,000,000. (Appendix L, page 172.)

Attention was also directed to the promptness with which War Department bills were paid. In December 1941 the oldest unpaid transportation bill had been on hand 42 days. By June 1943 this had been reduced to 11 days and thereafter no transportation bill on hand at the end of any month was more than 20 days old. In November 1944 War Department procuring offices reported that 12,800 unpaid commercial bills had been on hand more than 60 days (2.8 percent of the preceding month's

clearances); disbursing offices reported an additional 4,200 such bills on hand (0.5 percent of October 1944 clearances). At the close of August 1945 these numbers had been reduced to 1,500 60-day bills in procuring offices (0.3 percent of preceding month's clearances) and only 189 in disbursing offices (0.02 percent of July clearances). (Appendix L, page 173.)

FISCAL SERVICES FOR MILITARY PERSONNEL

A major ASF responsibility had to do with the administration of a number of fiscal programs for the benefit of military personnel. Among these were the payment of dependency benefit allowances, the issuance of war savings bonds, and the issuance of government life insurance and handling of premiums. (Appendix L, pages 173 and 174.)

Under the dependency benefit program a peak of 7,860,000 accounts were in effect during June 1945. Disbursements during this month totaled \$480,000,000 of which about \$270,000,000 was for family allowances and \$210,000,000 for voluntary pay allotments. Cumulative disbursements on account of family allowances for World War II (to 31 August) amounted to \$6,500,000,000. Approximately \$2,500,000,000 of this amount was contributed out of the pay of enlisted men and the balance was contributed by the government. Chart 69 shows the growth of family allowance disbursements from September 1942 through August 1945.

Total issuances of War Savings Bonds under the War Bond Program amounted to almost \$1,900,000,000 for the war period, including

CHART 69

DISBURSEMENTS FOR FAMILY ALLOWANCES

FISCAL

about \$750,000,000 of bonds issued to civilians. Issuances reached a peak of more than \$90,000,000 in July 1944 when sales to military subscribers amounted to \$54,000,000.

The number of government life insurance allotments in effect increased steadily throughout the war from a figure of 2,300,000

allotments in effect in August 1942 when reporting of this activity was initiated. In June 1945, 10,100,000 accounts, with a total value estimated to be in excess of \$90 billion, were reported in effect and the monthly premium transferred by the Office of the Fiscal Director to the Veterans Administration at the time was \$56,000,000.

RENEGOTIATION

In order to limit wartime profits, Congress passed the Renegotiation Act of 1942, effective 28 April 1942. This act as amended excluded all contracts and subcontracts upon which final payment had been made prior to 28 April 1942. The act applied to all cases where the contractor's fiscal year ended between 28 April 1942 and 30 June 1943. The Renegotiation Act of 1943 as amended applies to fiscal years of contractors ending after 30 June 1943.

The table below shows the case assignments by fiscal years from 28 April 1942 to 7 September 1945 within the War Department and the final disposition or present status of the cases. The cases disposed of by settlements and agreements are those in which refunds of excessive profits have been determined with the full concurrence of the contractors. The unilateral determinations are those cases in which excessive profits have been determined to exist and refunds ordered without the concurrence of the contractors concerned. Clearances and cancellations are the cases in which no excessive profits have been found.

A study of the percentages in the table brings to light a trend which undoubtedly may be attributed to the renegotiation acts. The relative number of cases in which excess profits exist has been gradually decreasing. This is probably caused by efforts on the part of contractors to hold their profits to reasonable levels by voluntary refunds or by

changes of prices through readjustment of their contracts. It is believed that the latter effect of the acts has saved the government large sums of money whose exact size cannot be estimated.

During the period from 28 April 1942 to 31 August 1945, \$9,639,000,000 of excessive profits were recovered by the WDPAB. Of this amount \$5,106,000,000 was recovered by statutory renegotiation under provisions of the acts of 1942 and 1943, and the remainder by other means. Recoveries within ASF amounted to \$4,655,000,000 of which \$3,157,000,000 was recovered by statutory renegotiation.

The cost of renegotiation within the War Department for the period from 28 April 1942 to 31 August 1945 was about \$20,500,000. Of this cost \$17,500,000 or 85.4 percent has been spent on salaries; the remainder covers rent, travel expenses, telephone and telegraph, and miscellaneous items. This cost is only 0.4 percent of the total excessive profits recovered by statutory renegotiation and 0.2 percent of total recoveries.

On the basis of studies of a large sample of cases, it has been estimated that approximately 70 percent of the excessive profits determined under statutory renegotiation would have been returned to the government as taxes in the absence of the program, but the remaining 30 percent would have remained in the hands of the contractors.

CONTRACT TERMINATION

The termination of contracts and the settlement thereof is an activity that had very small beginnings early in the war period, increased in tempo as production began to exceed expenditures, reached a small peak shortly after the collapse of Germany, and finally attained major volume immediately following the surrender of Japan. During the war period, more than 128,000 contracts were terminated, with the value of the cancelled portions totaling more than \$43 billion. More than half the contracts terminated during the war were terminated in August 1945. The commitment value of the August terminations was about one-third of the total commitment value of contracts terminated.

terminated, in total and broken down by services and by months from January 1944 to August 1945.

The settlement of terminated contracts follows along generally parallel to, but several months behind, the terminations. Thus the total number of settlements consummated during the war period was only 51,260 as compared with 128,000 terminations. If the Aug-

CHART 70

The total cancelled commitment value of all terminations is about equally distributed between the AAF and the technical services of the ASF. Chart 70 portrays the fluctuations in terminations, as measured by the commitment value for the period from January 1944 to August 1945. In terms of number of terminations, however, the ASF accounted for almost 85 percent of the total. Pages 175 to 179, Appendix N, contain detailed data on the number and cancelled value of all contracts

CHART 71

**SUMMARY OF CONTRACT TERMINATIONS
WAR PERIOD
BY NUMBER**

BY COMMITMENT VALUE

CONTRACT TERMINATION

ust 1945 terminations are excluded, however, total settlements of 51,000 compare with total terminations of 59,000. The distribution of settlements is about the same as that of terminations; about 83 percent of the number and 61 percent of the commitment value were settled by the ASF technical services, and the remainders by the Army Air Forces. Pages 180 to 184, Appendix N show monthly settlements since January 1944 and totals for all services and the AAF. Chart 71 shows the total number of contracts terminated and settled during the war period and the 31 August backlog. Chart 72 shows the commitment value of contract terminations settled by months from January 1944 to August 1945.

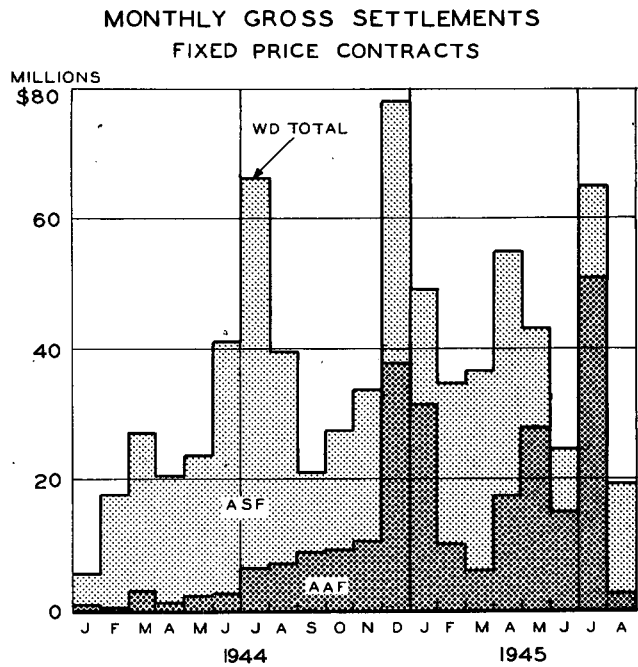

CHART 72

Variations in the amount of work in progress are direct reflections of the volume of initiations and settlements. Consequently, the load has remained fairly constant, even evidencing a decrease for the six months prior to V-E Day, but soaring as a result of end-of-war terminations. Pages 185 to 189 in Appendix N show the history of the backlog from January 1944 to the end of hostilities.

Claims filed by contractors followed the general pattern of terminations and settlements, approximately midway between the two. The number and total value of claims filed increased gradually up to the end of the war. Since there is a natural delay between the termination of a contract and the filing of a claim; there was no extreme peak at the end of the period of reporting (August 1945); such peak as might develop would be expected during September and October of that year. The settlement of claims followed a

CHART 73

course parallel to the trend but behind the filing of claims. Total claims filed during the war period numbered 19,435 while settlements numbered 16,392. The corresponding values were \$1,035,000 and \$914,000, respectively. Settlements under the 16,392 claims settled totaled \$796,000, representing about 87 percent of the claimed value, with a net settlement of \$715,000. The difference between the net settlement and the gross settlement represented the value of Government owned material or other assets transferred to and used by the claimants. Pages 190 to 196

CHART 74

* Cases with claims only.

CONTRACT TERMINATION

in Appendix N indicate the relevant statistics on claims by months and services as well as totals for the period from January 1944 to August 1945. Chart 73 shows the monthly settlements graphically for AAF, ASF, and the War Department total.

The length of time required to process and settle terminations with claims decreased from an average of slightly in excess of five months in January 1944 to a little more than two months by the end of the war. Chart 74 indicates the average time required to complete terminations with claim and also that portion of the total terminations having claims of over \$10,000 each, and shows how the trends have varied from January 1944 to August 1945.

It is inherent in the operation of settling terminated contracts that the larger contracts require more time than the smaller ones. This is true regardless of the means used to measure size, whether it be commitment value, size of claim, or other means. Chart 75 shows the variation in time required to settle contracts with claims of various sizes of commitment values. Data are based upon average times of May, June, and July 1945 settlements.

CHART 75

AVERAGE SETTLEMENT TIME ASF FIXED PRICE TERMINATIONS WITH CLAIM MAY - JULY 1945

PERSONNEL

ARMY STRENGTH

As war became imminent the strength of the Army increased rapidly from only 268,000 in June 1940 to 1,686,000 in December 1941. At the outbreak of war, there were only 193,000 officers and men overseas, including some 82,000 in the Pacific Theater. As indicated in Appendix P, page 197, the strength continued to rise until it reached a peak of 8,291,000 in May 1945, although the peak strength overseas (5,455,000) was reached a month earlier. The proportion of the total strength of the Army that was overseas reached a peak of 66.2 percent in March 1945.

Total Army strength began a steady decline in June 1945, and by the end of August had declined 3.2 percent, to 8,023,000. Strength overseas had declined 14.5 percent, to 4,623,000. Chart 76 indicates the relative strength of the continental and overseas personnel.

Since the need for officers was relatively greater than that for enlisted men,

the officer personnel increased at a more rapid rate than did the total strength. Officer strength (including warrant officers, flight officers, nurses, etc.) increased from 18,000 in June 1940 to 124,000 in December 1941 and then to a peak of 898,000 in August 1945. It should be noted that one of the reasons for the continued increase in strength even after demobilization had begun was that officers remained in the reported strength while they were on terminal leave. The percentage of officers to the total strength increased from 6.7 in June 1940 to 11.2 in August 1945. (See Appendix P, pages 197 through 202, for tabulation of total Army strength by type of personnel; overseas strength by theater and command; overseas strength by type of personnel; continental U. S. strength by major command; and continental U. S. strength by type of personnel.)

ACCESSIONS

Enlisted Men

Accessions of enlisted men are of three types -- enlistments, inductions, and calls

CHART 76

TOTAL ARMY STRENGTH, CONTINENTAL U.S. AND OVERSEAS

PERSONNEL

from the Enlisted Reserve Corps. Enlistments are further broken down into enlistments in the Regular Army and enlistments in the Army of the United States. Enlistments in the Regular Army were stopped in December 1941 and thereafter there were enlistments only in the AUS. However, enlistments in the Regular Army were opened again in August 1945, but only an estimated 100 men enlisted during August. Chart 77 indicates by month the number of accessions of enlisted men.

Of the 8,391,500 accessions from December 1941 through August 1945, 7,173,000 were inductions, 723,000 were enlistments, and 496,000 were calls from the Enlisted Reserve Corps. As is indicated in Appendix P, Page 206, enlistments were negligible after 1942.

There were more than 3,815,000 accessions of enlisted men during 1942. This was some 1,155,000 in excess of the total for the next largest year, 1943.

Commissioned Male Officers

Pages 203, 204, and 205 of Appendix P indicate the components and the large number of sources from which male officers were procured. Of the 762,000 total, 644,000 were commissioned officers in the Army of the United States, 281,000 of these were OCS graduates, and 198,000 were aviation cadets. The next largest source was the Officer Reserve Corps (114,000).

Warrant Officers and Flight Officers

Accessions of warrant officers and flight officers are tabulated in detail on page 206 of Appendix P. Total accessions of

warrant officers numbered 31,039 while those of flight officers numbered 54,661. The largest year for warrant officers was 1943 when 13,432 were appointed; 1944, with 31,421 appointments, was the largest year for flight officers.

Female Army Personnel

Page 208 of Appendix P shows accessions in the seven categories of female Army personnel. Of the total of 240,628 accessions, almost 80 percent or 188,000 were in the Women's Army Corps, and 50,000 of the remaining 52,000 were in the Army Nurse Corps.

SEPARATIONS

Before demobilization began, there were no wholesale separations. The great majority were separated for medical reasons, to accept commissions, or by death. After 12 May 1945, however, demobilization required separating personnel at an ever increasing rate. At the close of the period covered by this review (31 August) demobilization had just begun.

Prior to 1 May 1945, some 1,507,000 enlisted personnel and 72,000 officers (including warrant and flight officers, WAC, nurses, etc.) had been returned to civilian life. Between 1 May and 31 August an additional 630,000 officers and enlisted personnel had been separated. Thus the grand total, exclusive of casualties, from 1 December 1941 through 31 August 1945 is 2,209,000.

Of the total battle deaths (194,868) 23,953 or 12.3 percent were male officers.

CHART 77

PERSONNEL

Since the percentage of male officers to Army strength was 10.7 on 30 April 1945, it is apparent that deaths of officers were slightly higher in proportion than those of enlisted men. Similarly, there were 15,604 nonbattle deaths of officers, as compared with only 47,461 for enlisted men. The major cause for this disproportionate ratio is deaths due to aircraft accidents.

A much larger number of those separated were discharged in order to accept commissions. These separations included some 669,000 enlisted men and 7,500 enlisted women. (See Appendix P, pages 206, 207, and 209 for data on separations of officers, warrant officers, flight officers, and enlisted men, by cause; page 210 for separations of female Army personnel by type of personnel and page 218 for separations of enlisted women, by cause; and page 211 for data on battle casualties, by type of casualty.)

ASF PERSONNEL

ASF personnel may be divided into two categories -- operating (both military and civilian) and nonoperating (military only). Chart 78 shows the breakdown of the operating and nonoperating personnel by month. No reports were available on nonoperating personnel prior to June 1943.

Nonoperating Personnel

Nonoperating personnel is the type that is assigned or attached to ASF but does no constructive work. It consists mainly of personnel in the "pipe line", i.e., in training, in hospitals, and in staging areas. It can be seen that one of the big jobs of the ASF is handling and training these troops.

Operating Personnel

The operating personnel consists of persons engaged in operating the many installations and functions of the ASF. As is shown in Chart 78, it is composed of both civilian and military personnel, with the civilian strength greater than the military. It was the policy to use civilians in lieu of military personnel whenever the type of work permitted. The peak civilian employment of 1,022,758 was reached in June 1943, while the peak military operating strength of slightly more than half that number (554,287) was reached the following month.

Pages 212 to 213 in Appendix P show the strength of the military and civilian personnel and 217 shows accessions and separations of authorized types of civilian employees. The large personnel turnover should be noted.

For additional data concerning operating and nonoperating personnel see Appendix pages 214 to 216.

CHART 78

*No reports on non-operating strength prior to June, 1943.

PERSONNEL

WOMEN'S ARMY CORPS

Recruiting for the Women's Army Auxiliary Corps began in July 1942. In September 1943 the organization was changed to the Women's Army Corps, and at that time 41,177 of the 55,200 enlisted personnel reenlisted, the remainder being returned to civilian life. The peak strength of the WAC was reached in April 1945 with a total of 99,288, including 5,746 officers and warrant officers. By 31 August strength had declined to 90,779; this was an 8.6-percent drop or about two and one

half times as large as the decline in overall Army strength.

The first contingent of WAC's to be sent overseas went in January 1943. This group of 200 was augmented until more than 17,000 were overseas in July 1945. This number represented 18.0 percent of the total WAC strength. (See appendix pages 202, 208, 210, and 218 for detailed data on WAC strength, accessions, and separations, and page 200 for strength overseas.)

ASF MILITARY TRAINING

The training of personnel assigned to the ASF was accomplished by means of unit and individual training at ASF training centers (ASFTC), unit training other than at ASFTC, schools, the Army Specialized Training Program (ASTP), and Special Training Units. Chart 79 indicates the relative strength of these types of training activities for the period from January 1943 to the end of the war. It may be noted that training activity as measured by the number of persons in training increased until September 1943, at which time slightly more than 700,000 individuals were receiving some form of instruction at an ASF installation or school under ASF control. Page 219, Appendix Q, contains the numerical data to supplement the chart.

CHART 79

The bulk of the training was accomplished at replacement training centers (RTC's) and unit training centers (UTC's) during the early part of the war. In April 1944 all the RTC's and some of the UTC's were redesignated ASF training centers. These training centers continued to train both individuals and units. Page 220, Appendix Q, shows the statistical history of the trainee strength of these types of units. In Chart 80 is shown the disposition of the output of RTC's, UTC's, and ASFTC's by major channel. Pages 221 and 222 Appendix Q, contain detailed data on this subject.

Supplementary to and apart from the units in training at ASFTC's and UTC's are the units in training at posts, camps, or stations other than training centers. About

half the units in training, as measured by the enlisted strength were at this type of installation. Page 223 in Appendix Q indicates the strength and number of units in training regardless of location. Also shown are relevant statistics on number and strength of units which had completed training and were committed, inspected, and shipped overseas.

CHART 80

There were three types of schools employed in the training of ASF personnel--service, civilian, and officer candidate. In the first type, instruction is performed by Army personnel, at Army installations, using Army material for instructional purposes. Most of the school strength is concentrated in this type. The second type involves training at a civilian educational institution, in courses specially designed for the ASF. Instructional personnel and material used are those organically a part of the institution. Officer candidate schools are a specialized type of service schools in which selected enlisted men and warrant officer are trained for commissioning as officers. Enrollment at all three types of schools is shown in Chart 81 and numerically on Pages 224 and 225 in Appendix Q.

The Army Specialized Training Program was instituted in April 1943 to permit enlisted men who had been enrolled at advanced institutions of learning prior to induction or enlistment to advance or complete their courses of study in certain selected fields in which there was an over-all or imminent shortage. Page 226, Appendix Q, contains statistics showing the growth and decline of

ASF MILITARY TRAINING

CHART 81

the ASTP from its inception to the end of the war.

A detailed breakdown of the numbers of members of the Women's Army Corps receiving

training of various types is contained in Page 227, Appendix Q.

Special Training Units (STU's) were organized in June 1943 to impart as far as possible the equivalent of at least a fourth-grade education to illiterates and other persons with little education. At one time (in May 1945) more than one out of every six inductees were being sent to STU's. The average for the whole program to the end of the war is about one out of every ten. Almost 86 percent of the inductees enrolled in special training units completed the course successfully, while the 14 percent who were unable to qualify were discharged from the Army. Page 228, Appendix Q, shows detailed statistics, by month, on the number of men undergoing training in special training units.

Visual training aids numbering 409 training films and 592 film strips were produced during the period from January 1942 to August 1945, with peak production centered in 1943. Activity in the production of field manualr was centered in 1943 and 1944, while the production of technical manuals did not reach a peak until April 1945. Altogether 3,257 manuals were published between January 1939 and August 1945, of which 2,553 were published after December 1942. Page 229, Appendix Q, shows the monthly production of training aids.

HEALTH

The Medical Department is committed, in the regulations, to the conservation of manpower of the military forces. This is accomplished by the establishment and application of precise physical standards for induction and enlistment, the maintenance of the physical well-being of troops through the application of the most modern principles of preventive medicine, and the provision of the best in care and treatment for those who are disabled by sickness, injury, or wounds. Channels for evacuation of the sick and wounded are established for the methodical disposition of patients so as to insure retention of effectives and relieve the fighting forces of noneffectives. Transportation for patients is provided and the Medical Department is responsible for the administration of military hospitals, dispensaries, hospital trains, and other facilities adjunct to the provision of a complete medical service.

PHYSICAL EXAMINATIONS AT INDUCTION

Physical standards for determining acceptability for military service are given in Mobilization Regulations 1-9 (for inductees and enlisted men generally) and in Army Regulations (for officers, nurses, warrant officers, and Aviation Cadets, principally). These instructions have been modified and amended upon occasion.

In the mobilization period and during the war, 21,000,000 physical examinations were conducted for induction of enlisted men. During the calendar year 1943, 5,191,400 registrants were examined at induction stations. As a result, 3,307,600 were declared available for induction by either the Army or the Navy and 1,883,800 were rejected for service in either Arm. Thus the combined rejection rate for the United States for the year was 36.3 percent of all examined; the variation by service command was from 31.1 percent in the Seventh Service Command to 46.2 percent in the Fourth.

The causes of rejection were detailed in three categories: administrative, which included men who, although acceptable for limited service, were nevertheless rejected because of quota limitations, as well as unskilled illiterates, criminals, men dishonorably discharge from the service, and undesirables from a moral viewpoint; mental defectives which included psychiatrics (psychoses, psychoneuroses, and personality inadequacies) as well as those mentally deficient, among them illiterates unable to pass specially designed aptitude tests; and third, physical defects. This last category showed an over-all rejection rate of 20.38 percent of all persons examined, with variations by

service command from 18.25 percent in the Second to 22.09 percent in the Ninth Service Command.

The following table shows for white and colored registrants the rejection rates by cause and the principal disqualifying defects found in all persons rejected for physical reasons.

NUMBER REJECTED PER 1000 EXAMINED, BY CAUSE OF REJECTION SELECTEES AT INDUCTION STATIONS 1943

Cause	Total	White	Colored
TOTAL	362.9	330.0	532.2
ADMINISTRATIVE . . .	17.4	17.5	16.8
MENTAL	141.7	110.1	304.5
PHYSICAL	203.8	202.4	210.9
Cardiovascular	29.6	27.3	41.6
Musculoskeletal	29.4	29.9	26.3
Ear, Nose, Throat . . .	21.0	24.0	5.8
Eyes	19.5	19.8	18.3
Hernia	14.6	14.8	13.2
Neurological	13.4	12.2	19.4
Pulmonary Tuberculosis	11.5	11.5	11.3
Genitourinary	10.7	10.7	11.0
Feet	9.7	8.0	18.0
Respiratory (except TB)	9.3	9.4	8.9
Gastrointestinal	6.6	7.3	3.3
Venereal Disease	5.2	3.0	17.0
Teeth	1.1	1.2	0.9
All Other	22.2	23.3	15.9

During the period from September 1942 to January 1943 when the Army was inducting registrants in the age group 18 years to 46 years, rejection rates by age have greatest coverage. Chart 82 shows the percent of those examined in each of certain age groups which was accepted for either general service or limited service.

It is important to note that under more rigid standards applicable in 1940 and 1941, absence of teeth was the second most important cause for disqualification of white registrants, at a rate of 27.2 per 1,000 examined, although substandard visual acuity was, as in 1943, the fourth most important cause. Defects leading to a classification of limited service (rejected for service in 1940 and 1941) show principal causes for white registrants as 56.9 per 1,000 for poor teeth, 40.1 for poor eyes, and 20.8 for hernia. Among Negroes the leading causes were venereal disease, 143.3 per 1,000; hernia, 18.5; teeth, 18.4; and eyes, 16.8

HEALTH

CHART 82

Acceptance of men with these defects after December 1942 required certain rehabilitation by the Army; procurement of spectacles and restoration of teeth were programs of considerable magnitude, while treatment of men inducted with venereal disease required special clinics. In connection with this last category, all statistics relating to venereal disease contracted while in service must be corrected for this "Existed Prior to Service" group.

Data relating to separation also suggest that the existence of this "limited service" group, created a major morale problem and an administrative problem in staffing units for overseas service. The following table shows the principal defects found in men inducted for limited service.

**DEFECTS FOUND IN MEN INDUCTED
FOR LIMITED SERVICE**
Occurrence Rates Per 1,000 Inducted
January - 1 May 1944

Chief Defect	Occurrence Rate
Substandard Visual Acuity . . .	490.4
Hernia (Inguinal, Undescended)*.	213.2
Eye Defects (Excl. Visual Acuity)	115.1
Ankylosis & Limitation of Motion	35.1
Ear Abnormalities	30.7
Deformities	28.5
Feet Affections	21.7
Amputations	11.0
Nose and Sinus Abnormalities . .	10.2
All Other Diseases and Defects .	44.1

* Became acceptable 11 November 1943. It is probable that induction boards reclassified a number of such men out of the IV-F group and sent them up for induction early in 1944; this may lead to overstatement of this occurrence rate.

ADMISSIONS TO HOSPITALS

Continental United States

The maintenance of the health of troops in the United States is best indicated by the behavior of admission rates for disease. The tabular data in Appendix R (pages 230 to 232) cover the war months. Chart 83 traces the course of admission rates, with certain diagnostic breakdowns, from January 1940 through September 1945. In the first winter after mobilization began an epidemic of respiratory diseases occurred, causing unusually high rates. Continued inductions operated to sustain a level of morbidity somewhat higher than the experience of the previous decade, yet the continual process of selection and seasoning of troops has resulted in admission rates which, except for the summer of 1943, have been growing steadily more favorable since the fall of 1941. The sharp peak in the summer of 1943 does not represent an increase in morbidity, but rather arises from administrative action which provided for release of men through hospitals by the method of the disability discharge. This policy was abruptly altered in November of that year. It is likewise evident that morbidity in December was artificially low. The understatement results from the reluctance of personnel to report at sick call and thus jeopardize leave or pass privileges during the Christmas and New Year season.

Charts 84 through 88 present the facts for selected diseases which are significant components of the total rate or which present problems of prevention or treatment or both.

Neuropsychiatric admission rates have been more dependent, perhaps, upon War Department policy regarding suitability for service and discharges than upon any real variations in incidence. The bulge in the last half of 1943 is directly related to the publication of WD Circular 161, 1943, and the

HEALTH

CHART 83

ADMISSION RATES TO HOSPITAL AND QUARTERS
DISEASE AND NONBATTLE INJURY - CONTINENTAL U.S.

discharge data closely parallel the admissions. Despite the stress upon the screening at induction of men suspected of tendency to succumb to psychiatric disorders, admissions for this cause continued relatively high throughout the war. (Chart 84)

Pneumonia (Chart 85) shows a decreasing incidence since January 1943 when allowance is made for the typical seasonal pattern of this complaint. Tuberculosis admission rates depict a case-finding story rather than a true measure of incidence. In early 1943 a

CONTINENTAL UNITED STATES**

radio-graphic survey of men inducted previously without X-Ray was directed, and suspected cases were likewise examined. X-Ray examination of chests upon separation is also a directed procedure; hence, coincident with demobilization (commenced on R-Day, 12 May

1945), cases were discovered that would otherwise have been unnoticed. (Chart 86) The data for venereal disease indicate generally rising rates for cases contracted during service since the spring of 1943. By contrast, the advances in therapy have very much reduced the loss of manpower through a reduction in the required treatment time per case. Days lost per case averaged 19.2 in 1942 while for September 1945 the average was 4.20 days lost per case. (Chart 87).

In the spring of 1945 certain apprehension attended the prospect of the return of large number of troops from the malarious areas overseas. Chart 88 shows the rising rate of malaria admissions from infections acquired outside the United States.

Morbidity Overseas

The tabular data included in Appendix R (pages 230 through 232 clearly establish the fact that disease and injury were more prevalent overseas than in the United States. In the primary disposition of forces, troops were moved to the Pacific theater, Central, South, and Southwest. The later movement deployed forces across the Atlantic in far greater numbers, eventually, than the westward dispositions. This timing had a marked effect upon the relative importance of each part of the morbidity experience abroad. (Chart 89)

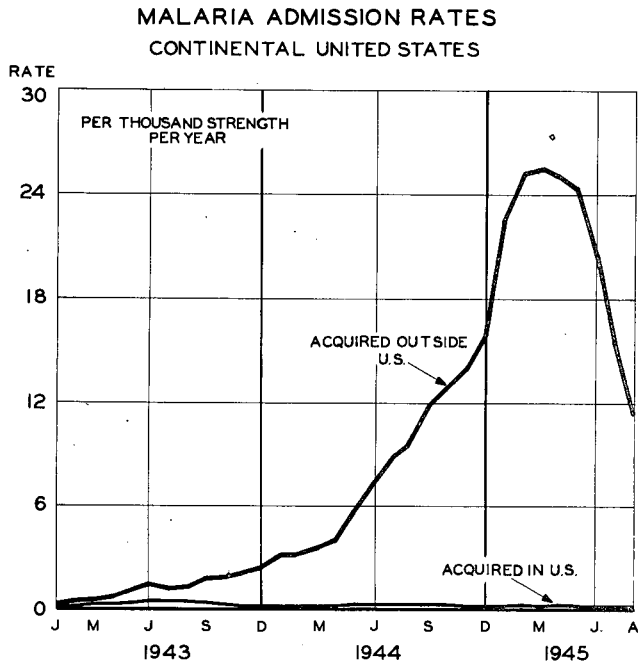

CHART 87

**VENEREAL DISEASE - CONTINENTAL UNITED STATES
(WAR PERIOD)**

HEALTH

CHART 88

Early experience in the Pacific was attended by admission rates for diseases which were extremely high. This applies particularly to the experience of troops in the South Pacific. Malarial and fevers of undetermined origin took a heavy toll of effective strength. Diseases that are rare or

nonexistent in the United States made their appearance in the Pacific, China and India-Burma Theaters. Dengue, filariosis, scrub typhus, schistosomiasis, cholera, Japanese B encephalitis, and dermatitises variously known as "New Guinea," or "jungle rot" constituted additional items among the health hazards confronting the troops. Charts 90 indicates the yearly average admission rates overseas.

Malaria was prevalent also in North Africa, the first active theater in the combat against Italy and Germany. Poor local sanitary conditions contributed heavily to the morbidity of troops throughout the North African, Sicilian, and Italian campaigns. Infectious hepatitis appeared in significant proportions and, with the conquest of Naples, venereal disease assumed major importance.

Early experience in the European Theater was relatively favorable. Throughout the course of active combat from D-Day (6 June 1944) until the end of the war with Germany (8 May 1945) morbidity from disease was at levels which must be adjudged favorable by any standards.

In all the European continent, dangers were continually present. Wholesale destruction of dwellings and public works, with near famine conditions, created grave sanitary problems in the large cities; diphtheria,

CHART 89

HEALTH

CHART 90

ANNUAL ADMISSION RATES FOR DISEASE AND INJURY

typhoid, and typhus fever abounded in the homeless and nomadic population to create a major problem of control and prevention. The success of U.S. Forces in arresting the epidemic of louse-borne typhus in Naples is well known. Less widely appreciated, perhaps, but no less important was the medical provision for diseased and injured displaced persons, enemy prisoners of war, German political prisoners, and allied prisoners of war, camps of which were overrun with the collapse of Germany. At one time U.S. Forces were responsible for the supervision of 450,000 such patients. The number of non-Army patients is shown on pages 245 and 246 of Appendix R.

Both in the Italian Campaign in the winter of 1943-44 and the European campaign in the winter of 1944-45, trench-foot greatly augmented the admission rates for nonbattle injury. The urgency of combat and the tactical restrictions work to produce nonbattle injury rates closely paralleling the index of combat activity. Thus active theater admission rates for nonbattle injury have been 150 percent to 200 percent of the continental U.S. rates.

DISPOSITION OF CASES

Overseas

Lines of evacuation for the sick and wounded in overseas theaters are established to remove the patient to a medical facility adequate to the treatment of his case. Cases which require hospitalization in excess of a specified time limit (referred to as the evacuation policy) or cases which are manifestly disabled, are invalided home as soon as possible. During the war, the evacuation policy applied to several theaters individually varied from a minimum of 60 days to a maximum of 180 days. Under the latter it is almost a certainty that the only patients returned would be those who had suffered permanent and incapacitating disability.

In the following table are shown the disposition of all hospital admissions in the Mediterranean Theater in 1944. In excess of 88 percent of all admissions were returned to duty in the theater. For comparison with the actual proportion evacuated, there are also shown the derived estimates arising from World War I data. From this it would appear that the theater was operating on a policy of between 120 days and 180 days. The slated policy was 120 days.

The European Theater operated on a 180-day policy as long as hospital facilities were adequate to take care of the volume of patients that would accumulate thereunder. By December 1944, the sustained severity of combat and the accumulation of trench-foot cases increased the patient load in hospitals so as to demand relief. Hence a de-facto 90-

day evacuation policy was ordered which remained in effect until April when a further reduced policy was placed in effect in anticipation of the end of the war. The following table shows the proportions of admissions by diagnosis and by theater that were evacuated from overseas theaters in the period January 1944 to March 1945.

PATIENTS EVACUATED FROM OVERSEAS THEATERS
Percent of Admissions - January 1944
to March 1945

Theater	Cause for Admission		
	Disease	Nonbattle Injury	Wounded
ALL OVERSEAS	5.2	8.8	26.1
European	5.5	16.5	27.6
Mediterranean. .	3.0	6.5	23.0
Pacific Areas. .	7.6	3.9	22.9
Asiatic.	1.7	2.3	13.5
Alaskan.	5.1	3.1	-
Caribbean. . . .	3.4	2.1	-
Middle Eastern .	2.3	2.3	-

Data concerning the total volume of evacuees are presented in Appendix R, page 233. Chart 91 shows the growth of the volume from 1943 through August 1945, and also indicates the portion of the total patients who were wounded. This latter increased rapidly after D-Day in Europe.

Through December 1943, some 78,200 patients had been evacuated to this country and through December 1944, evacuees numbered 240,000. During 1943 nearly 42,000 evacuees were disposed of from hospitals in this country and by the end of 1944, the two-year

CHART 91

PATIENTS EVACUATED FROM OVERSEAS
ALL THEATERS

total exceeded 142,000 dispositions. Thus, tabulated dispositions are equivalent to 59 percent of all patients received from overseas through December 1943. These dispositions accounted for 72 percent of the disease patients, 48 percent of the nonbattle injury patients, and only 29 percent of the wounded. These data must therefore exclude the final dispositions of the seriously injured and wounded patients for whom the probable disposition is discharge on certificate of disability. The following table gives the details.

DISPOSITION IN 1943 AND 1944 OF PATIENTS
EVACUATED FROM OVERSEAS

* Through December 1943

Two factors are chiefly responsible for the larger proportion of dispositions as CDD's and retirements resulting from disease in 1943 than in 1944. First, the policy of the War Department in granting CDD's was much more liberal and, second, somewhat longer evacuation policies were in effect overseas, with the result that only the more serious cases were returned to the United States for treatment and final disposition.

Continental United States

For purposes of comparison, all cases admitted during 1942 in continental United States were traced through December 1943, with the results indicated in the preceding table. It is certain that disability discharges accounted for a larger proportion of total dispositions in 1943 than during 1942, the year to which these data apply.

DISABILITY DISCHARGES

Disability discharges by months are shown in Chart 92. As set forth earlier, the numbers of disability discharges granted at particular times has been dependent upon over-all discharge policy and the desirability of retaining in service persons with certain types of disabilities as related to competence in some field of endeavor. The liberal policy established by WD Circular 161, 1943, although rescinded within four months, produced a sharp peak, reaching its maximum in September of that year. Much of the total is accounted for by discharges granted to men classified as limited service who, after repeated change in assignments, could not be made adaptable to any military task reasonably available. A similar but more closely controlled action was again taken with respect to limited service personnel with the publication of WD Circular 370, 1944, and may be chiefly responsible for the rise which reached its maximum during October 1944. The steady increase since January 1945 is accounted for in major part by the dispositions of patients evacuated from overseas.

Since the physical standards applicable to determinations of disability for discharge are clearly related, if not identical, with the standards applicable to induction, importance attaches to examination of the causes for discharge. In the following table the principal causes for disability discharges are compared with rejection rates recorded in 1943. Neuropsychiatric disease remained the leading disability for which discharge was granted. Note should be taken, however, that approximately 30 percent of the discharges under this diagnosis in 1945 were judged attributable to combat. Similarly, wound sequelae account for 55 percent of the musculoskeletal defects in 1945. In contrast with the psychiatric disorders, the most frequent diagnosis under general and infectious diseases is arthritis which accounts for more than 50 percent of these cases; yet the observed occurrence rate for this complaint in

CHART 92

DISCHARGES FOR DISABILITY

HEALTH

1940 and 1941 was only 3.7 per 1,000, or less than 0.25 percent of all recorded defects.

Gastro-intestinal	1.8	9.4	4.8	2.7	7.6
General and Infectious	-	9.8	8.9	9.5	8.2

a/ Combat induced 13.4 percent
b/ Wound sequelae 12.7 percent; as a result of injury 4.3 percent

In 1942, out of a total of 62,014 discharges for disability, 53,535 or 86.4 percent were for defects deemed to have been in existence prior to induction into the Army. There is some variation by diagnosis, from 94 percent EPTS for musculoskeletal defects to 85.6 percent for cardiovascular diseases, among the more common complaints. Nonbattle injuries and battle injuries are, of course, apposite and sustained in line of duty. It is probable that almost all of the limited service unadaptable discharged in 1943 were induced with the complaint for which discharge was granted. This appears to be true also for the majority of the other discharges granted in 1943. Data of this nature are not available for 1945.

NONEFFECTIVES

The number of patients who will remain in hospitals or quarters for treatment on any day is dependent upon two factors: the incidence of diseases, injuries, and wounds and the length of time required to complete the treatment of the case, either by restoration to duty, evacuation from the hospital, or discharge with a remaining disability. During the period from July 1943 through June 1944, the average days lost per case in all overseas theaters were: 42.0 days for wounded; 19.0 days for nonbattle injuries; and 13.4 days for diseases. Within the last category the variation by diagnosis by theater was from 4.9 days for diarrhea and dysentery cases in the European Theater to 23.7 days for venereal disease cases in the Pacific Ocean Areas. Variations were also introduced by changes in

CHART 93

the evacuation policies applying at different times, shorter policies resulting in shorter durations.

CHART 94

**NUMBER OF PATIENTS REMAINING
IN HOSPITAL AND QUARTERS OVERSEAS**

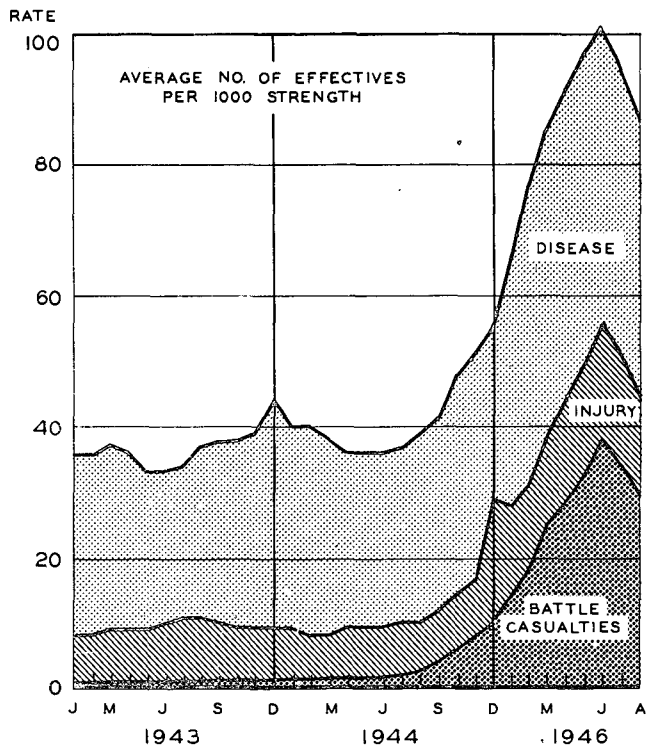

HEALTH

Total overseas noneffective rates by major category are shown in Chart 93 and on pages 234 to 236 of Appendix R. These data indicate the proportional distributions of patients by major category in relation to strength. In order to trace the growth of the medical task in terms of patients under treatment, Chart 94 shows the total patients under treatment by months from January 1943 to April 1945. This is incomplete coverage, but the closing date is beyond the peak month.

CHART 95

NONEFFECTIVE RATE IN CONTINENTAL U.S. BY CAUSE OF ADMISSION

The noneffective rates obtained in the United States are shown in Chart 95. The total rate is broken down by categories of patients, as between those admitted from troop units in this country and those evacuated from overseas. Chart 96 and page 247, Appendix R present data concerning the number of patients.

HOSPITAL FACILITIES

The tabular data presented in Appendix R, pages 237 through 249, include tables on the capacity of fixed and mobile hospital units overseas and hospital beds by type of hospital in the United States, as well as tables of beds occupied. The percent of patients other than U.S. Army patients, percent although not discussed here, is indicated in the appendix tables.

From 1940 to September 1944 the authorization for beds at Z/I hospitals was 4 percent

of the Army strength in the United States, with a 1-percent expansion factor. This was reduced to 3.5 percent in September 1944 and again reduced in December of that year to 3 percent with no expansion factor. When the number of patients being returned to United States from overseas began to overload the general hospitals, an expansion program was initiated. In January 21,000 additional beds were made available to the Medical Regulating Officer. This was accomplished by redesignating existing facilities as general hospitals and by making fuller use of space at all general hospitals. In January 1945 there were 153,000 authorized beds in general hospitals, of which 127,000 were effective. In June, when the general hospital expansion was ended, there were 164,000 authorized beds, of which 153,000 were effective. A concurrent expansion was made of the convalescent hospitals, from 27,000 in January to 50,000 in July.

The difference between the authorized number of beds and the effective number is caused by the dispersion factor. There is, first, the internal hospital dispersion caused by the necessity for having various wards designated for specific types of complaints, which when 80 percent filled are considered as operating at capacity. Geographic dispersion must also be considered, since provisions have to be made for peak loads which do not occur simultaneously in all areas.

CHART 96

NUMBER OF PATIENTS REMAINING IN HOSPITALS—CONTINENTAL UNITED STATES

HEALTH

Overseas, the authorization for the number of beds in fixed and nonfixed hospitals was determined by theater authorizations from the War Department. Since the types of diseases and the climatic conditions as well as the nature of the combat, varied in the several theaters of operation, it was necessary to establish different percentages of troop strength to allocate bed space. These authorizations generally were above the actual necessary quantities, but were not always met.

Personnel

To staff the hospitals and other medical facilities, more than 600,000 personnel were needed. The peak strength was 697,541 in October 1944. In the spring of 1943 there were no personnel problems in the Medical Department. By the spring of 1944, shortages in specialists began to appear. Tables of Organization could not be properly filled and

units were sent overseas with sub-T/O assignments of specialists. To alleviate this shortage, strict controls were initiated in the United States in the summer of 1944. This shortage continued and increased in the fall of 1944. The Army Nurse Corps was also operating with limited personnel. To overcome this shortage the nurse recruitment program was started in the spring of 1945.

When the war ended these problems ceased to exist, since the tactical requirements for many units disappeared. The demobilization program was then initiated to return medical specialists to civilian life so as to end the shortage there as soon as possible. Between May and December 1945 more than 15,000 doctors and 24,000 nurses were demobilized. The table below shows the strength of the various branches of the Medical Department. On pages 250-252 of Appendix R, a more detailed study of the main categories of personnel is shown.

^{a/} Data are for a selected list of items representing approximately 90 percent of the total work performed at all shops covered. Excludes data for Corps of Engineers for January and February 1944. Figures for January 1944 - May 1945 cover all 5th-echelon shops, regardless of operator. As result of revised reporting procedure, figures for June - August 1945 cover all technical service shops, regardless of echelon, but exclude data for combined shops at ports of embarkation. Data for May - August 1945 include work loads at installations not having repair facilities. Effective June 1945, the cut-off date of reports was changed from the last day of the month to the 20th. Consequently data for June 1945 are for the period 1-20 June and data for July and August are for monthly period ending on the 20th of the month indicated. For complete information on nature of data included, see ASF Circulars No. 3, 1944, as amended; No. 273, 1944, as amended; and No. 210, 1945, as amended.

^{b/} Data not available.

^{c/} Excludes data for commercial shops; data for Marine Repair Shops are included only for July 1945.

^{d/} No reports prior to this date.

^{d/} No reports prior to this date.

^{a/} Data are for a selected list of items representing approximately 80 percent of the total work performed at all shops covered. Figures for January 1944 - May 1945 cover all 4th-echelon and combined shops, regardless of operator. As result of revised reporting procedure, figures for June - August 1945 cover all service command shops, regardless of echelon and include data for combined shops at ports of embarkation. Data for May - August 1945 include work loads at all installations not having repair facilities. Effective June 1945, the cut-off date of reports was changed from the last day of the month to the 20th. Consequently, data for June 1945 are for the period 1-20 June and data for July and August are for monthly period ending on the 20th of the month indicated. For complete information on nature of data included, see ASF Circulars No. 3, 1944; as amended; No. 273, 1944, as amended; and No. 210, 1945, as amended.

^{f/} Excludes commercial shops.

a/ Data not available prior to this date.

z/ Figures cover all ocean-going steam or motor ships of 1600 gross tons and over, including British controlled merchant type ships commissioned for naval service or used as fleet auxiliaries, and vessels controlled by the United States Army and Navy. Vessels in the Baltic and Black Seas, and vessels on the Great Lakes are excluded. Losses are on an occurrence basis and are subject to amendment as a result of late notifications, especially in the more recent periods.

a/ Preliminary -- subject to revision. Petroleum products are excluded. Figures for French North Africa represent only coal used for military and civilian purposes. Other shipments to Africa are included in Italy since they were reshipped to Italy or replaced previous loans to Italy. All shipments to Southern France are shown in U.S. Zone of European Theater. Areas of exclusively U.S. responsibility consist of the Philippines and a portion of the Netherlands East Indies.

b/ No Army shipments of civilian supplies, as such, were made prior to July 1943.

TOTAL	34,289	28,284	13,940	10,562	3,782	-

c/ First month during which any rehabilitation center was in operation.

d/ Adjustments, not allocable by month, are based upon reports cumulative to 30 June 1945, received from each installation. The principal discrepancy between these data and those previously reported monthly resulted from lack of uniformity in reporting prisoners received for temporary custody pending transfer to disciplinary barracks. In the totals all prisoners received, either for transfer or for rehabilitation, are included.

() Indicate minus quantities.

NOTE: Obligations are scheduled as originally reported for the respective fiscal years, unadjusted for corrections made in ensuing fiscal years. Consequently, the totals of quarterly obligations figures shown do not represent the net cumulative obligations. The net cumulative obligations at any date are determinable by adding to the unliquidated obligations outstanding the cumulative expenditures to that date for all periods involved, since the subsequent fiscal year adjustments are reflected in the current unliquidated obligations.

See footnotes on next page.

1/ The discharge and nonbattle deaths from 1 December 1941 through 31 December 1944 and overseas separations from 1 December 1941 to date are based on service records received and processed by TAG for the month stated. Continental separations from 1 January 1945 to date are reported by service commands. Service records received more than four weeks after separation, were processed in the following month. Battle casualties are reflected by month of occurrence. Honorable discharges include physical and mental, over 38 years of age and over-age, demobilization and miscellaneous (Hon). Dropped from the rolls, resulting from AWOL, are not reported herein as separations.

1/ Preliminary.

m/ Less the "over 28" category.

a/ New series as of this date.

b/ Accessions of doctors, nurses, dietitians, physical therapists, WAC officers and WAC warrant officers reflect month of entry on active duty. Data on nurses prior to February 1945 were based on monthly reports received from the Surgeon General's Office. Accessions of WAC enlisted personnel based on monthly reports from enlistment papers received by TAG are shown by actual month of enlistment from July 1942 through October 1943 and by processing month thereafter. Figures for 1943 include WAAC personnel reenlisting in WAC.

g/ Incomplete.

g/ Incomplete.

i/ Preliminary.

p/ Separations of doctors, nurses, dietitians, physical therapists, WAC officers and WAC warrant officers reflect month of relief from active duty. Separations of nurses prior to February 1945 were based on reports received from the SGO. Separations of WAC enlisted personnel, including those discharged to accept comm., are recorded monthly by TAG subsequent to discharge and are shown by actual month of separation from Aug 1942 thru Oct 1943 and by processing month thereafter. Figures for 1943 include WAAC personnel separated to reenlist in WAC. Excl. dropped from the Rolls AR 615-300 and Desertion (23).

a/ New series as of this date.

g/ Incomplete.

y/ Honorable Discharges include Phys. & Mental, Demob. & Misc.(Hon). Excludes dropped from the rolls per AR 615-300 & Des.(23). Separations of WAAC/WAC are shown by actual month of separation from Aug 42 through Oct 43 and by processing month thereafter.

z/ During Aug, Sep, and Oct 1943 approximately 14,199 WAAC Enlisted Personnel separated at own request due to conversion to WAC.

#/ Includes 41,177 WAAC Enlisted Personnel separated to reenlist in WAC.

* Prior to April 1944, the figures shown for Special Training Units indicate strength at replacement training centers. So that duplication of strengths shown for T/O Units and Schools would be avoided subsequent to April 1944, the strength figures for ASF Training Centers do not include T/O units at the centers or trainees on detached service at schools.

a/ Data not available prior to this date.

b/ New item as of this date.

a/ Data not available prior to this date.

b/ New item as of this date.

e/ These data do not represent T/O units; they indicate basic training of unassigned personnel at ASFTC's, under preactivation training directives, preparatory to the activation of T/O units.

f/ Includes units ordered to move at current status of training, that could comply with the provisions of the movement order.

g/ Figure covers quarter ending with this month.

h/ Includes two units (GHQ Depot), Type E) with strength of 306 men, not indicated by branch of service.

i/ Includes the following units not indicated by branch of service: 2 WAC detachments; 3 CIC detachments; and 1 Infantry Regiment (Puerto Rican).

b/ Data not available prior to this date.

m/ The counts of beds, both fixed and mobile, include only those in T/O units for which personnel were available. Units with a capacity varying between seven and eight thousand beds, which were overseas in the North and Latin American Theaters and the Pacific Ocean Areas, have been excluded from the series. These beds, for which equipment, but no personnel was available, were in these areas prior to 1 October 1940 or were maintained there as defense reserves. The counts of beds present include both those in units provided from the Z/I and in those activated in the theaters from personnel and equipment available locally.
